Humans should 'talk' like chimps

If humans behaved more like their chimp relatives they might be better at communicating, say experts.

Would you groom your colleagues to diffuse tensions at work?

Scientists at the Zoological Society of London are looking for volunteers to "talk chimp" in their everyday work and home life to test out the theory.

One part of the survey recommends waving your arms, brandishing objects and making yourself appear large, to assert authority over others.

Volunteers can also bond with their group by grooming each other.

Chimps are our closest living relatives and share a variety of similarities, not only in genetic make-up but also in expression and behaviour, said ZSL.

Animal behaviour experts want to see how "primate patter" can resolve workplace conflicts, express emotions and strengthen human bonds.

The New York Times.

C SUNDAY, DECEMBER 22, 1912.

DARWIN THEORY IS PROVED TRUE

English Scientists Say the Skull Found in Sussex Establishes Human Descent from Apes.

THOUGHT TO BE A WOMAN'S

Bones Illustrate a Stage of Evolution Which Has Only Been Imagined Before.

CREATURE COULD NOT TALK

Probably Lived at a Time When Other Species of Humans Had Developed Further Elsewhere.

Special Cable to THE NEW YORK TIMES.

LONDON, Dec. 21.—A race of apelike and speechless men, inhabiting England hundreds of thousands of years ago, when they had for their neighbors the mastodon and other animals now extinct, is the missing link

race, but the bosses of bone in the Sussex man are smaller than in the higher race.

But it is not, Dr. Woodward declares, till we come to an examination of the lower jaw that the full significance of the discovery becomes apparent, for while the brain case is emphatically human the jaw is as emphatically apelike. Found by itself it might and would be regarded as that of an ape with many human features in its general conformation.

This remarkable fragment agrees with the celebrated jaw found about five years ago on Jauer Heidelberg and known as the Heidelberg jaw, but it presents an apelike feature which the less ancient Heidelberg jaw does not. The most striking point of both is the extraordinarily receding chin, the jaw sloping backward sharply from the base of the teeth, which had a decided forward thrust.

In the living races of mankind the chin is always more or less conspicuous, the lower border of the jaw standing well in advance of the teeth, which are mounted vertically along its rim.

Other apelike features of the jaw are the absence of the muscular ridge along its inner surface, known as the mylohyoid ridge, affording attachments for the muscles of swallowing and speech. This ridge is always present in the human jaw.

Finally in apes two branches of the lower jaw, where they meet in front behind the teeth, form a sort of platform on which the tongue rests. In man this platform has been suppressed,

GAMBLING PALACES ABOUND IN LONDON

Under Decorous Exteriors and in Fashionable Quarters They Lure the Gilded Youth.

LAW HANDICAPS THE POLICE

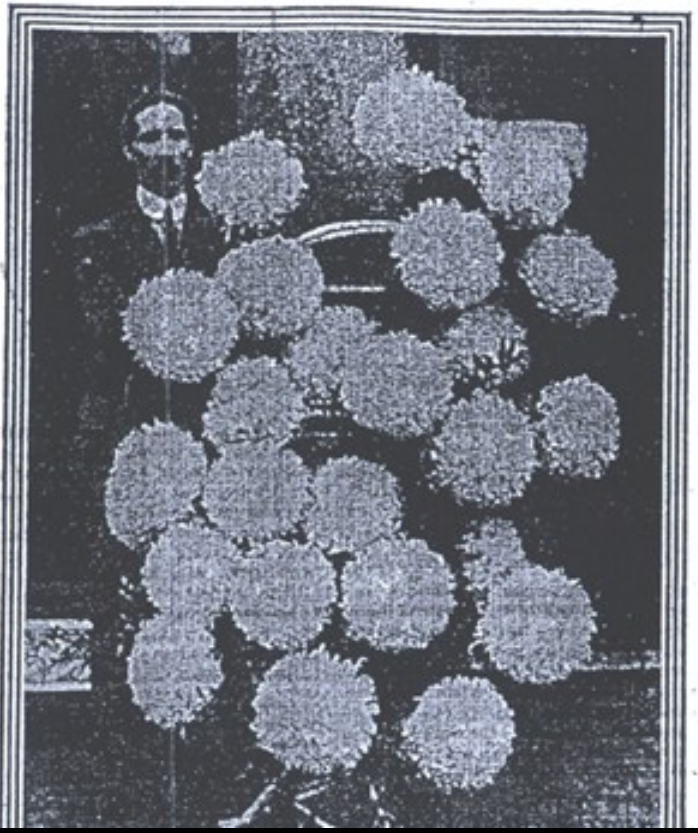

Raid in Belgravia District Calls Public Attention to Evil Which Flourishes Most Outside Clubs.

Special Cable to THE NEW YORK TIMES.

LONDON, Dec. 21.—To those who know London it is no news that, given the requisite capital, it is a simple matter to discover facilities for losing it over a gambling table. The gilded youths of the capital need not restrain their propensity to court the goddess of fortune to occasional visits to Monte Carlo and Enghien, or the many clubs which flourish in Paris. Public attention has been drawn this week to the opportunities afforded them here by the police raid on a gambling establishment conducted in the highly decorous neighborhood of Wilton Terrace, Belgravia.

"Chemin de Fer" is said to be the game most in vogue at the moment, and, despite the utmost vigilance of the police, gaming houses are flourishing

Eoanthropus Dawnonis, the Dawn Man.

The most ancient English human relic has been called the dawn man of Piltdown. Owing to the fact that the skull fragments had been badly damaged and scattered by workmen before they came into scientific hands, there has been a great deal of controversy as to their significance. Until the experts arrive at an agreement about this type it might be well for others to reserve judgment. There can be no doubt as to the fact that these remains show a curious admixture of simian and human characteristics, the jaw and teeth being even more simian than that of the Heidelberg man, while the skull, though primitive, is distinctly human. ANATOMICAL RECONSTRUCTION IS NOT SCIENCE!

AT BEST IT IS ARTISTIC LICENSE AND IMAGINATION.

How Different Faces Can Fit a Single Skull

How could early reconstructions of Neanderthal man's appearance have been so wrong? And is today's accepted version of "the truth" indeed true? *Nobody knows the answers to these questions*, but these two reconstructions, prepared especially for this book ***(The Neanderthals -Time Life Books)*** and shown here in full-face and profile views, show how widely divergent interpretations come about. Both of the heads start from the same Neanderthal skull, the so-called man from La Chapelle-aux-Saints, France, but end up looking strikingly different. *The difference arises from the exercise of anatomically justifiable artistic license in reconstructing the soft tissue* that once gave external shape to the head–but has long since disappeared because it does not fossilize as skull bones do. In the version at top, the artist has supplied the skull with flesh and features that give Neanderthal a modern look: beetle–browed and heavy–jawed, but clearly a relative of today's man. The version at bottom applies 19th Century ideas of the nature of Neanderthal man to reconstruct the lost, soft tissues of the head. With more hair, a thicker neck, a fleshier mouth and wider, flatter nose, the same skull presents Neanderthal as a creature more ape than man.

A gallery of portraits of Neanderthal man dating from 1888 (top left) shows how widely conceptions of him have varied--even when based on the same fossil find. The reconstruction with its musculature exposed (top center) was modeled in the early 20th Century for the noted French anthropologist Marcellin Boule from a skull found at La Chapelle-aux-Saints. Other scientists took the same skull and, reconstructing the soft tissue differently, came up with the heads in the second row at left and at bottom right.

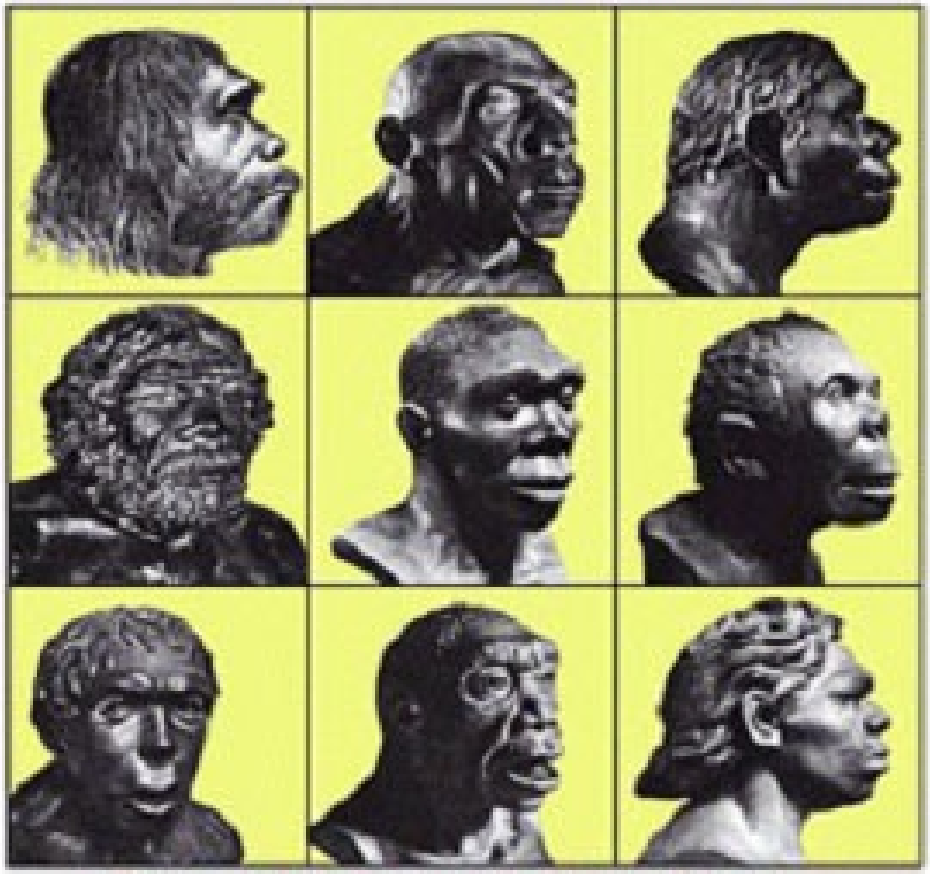

Human Origins
The Search for Our Beginnings

The techniques of reconstructing Neanderthals have been considerably improved (left) since the first portrait drawn by Schaaffhausen in 1888. Nevertheless, we have still not formed a clear image of many details of their physical appearance.

Figure 31 Neanderthals. Neanderthals were distinguished by massive ridges over the eyes.

Homo sapiens in Europe

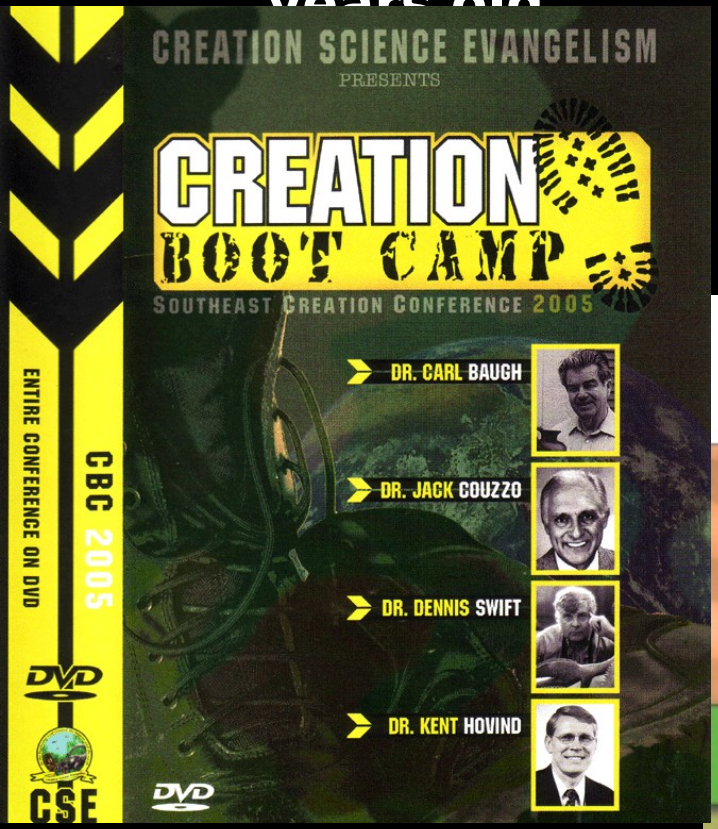

Members of the species *Homo sapiens* first appeared in Europe about 130,000 years ago. The fossils of a group of *Homo sapiens* called Neanderthals *(nee AN dur TALZ*—the *h* is silent) were found in 1856 in the Neander Valley of Germany. The Neanderthals were short and powerfully built. Their skulls were massive, as shown in **Figure 31,** with protruding faces and heavy, bony brow ridges. The average Neanderthal brain was slightly larger than that of modern humans, although there is much overlap in size. Many scientists that study human evolution now classify Neanderthals as a separate human species, *Homo neanderthalensis*.

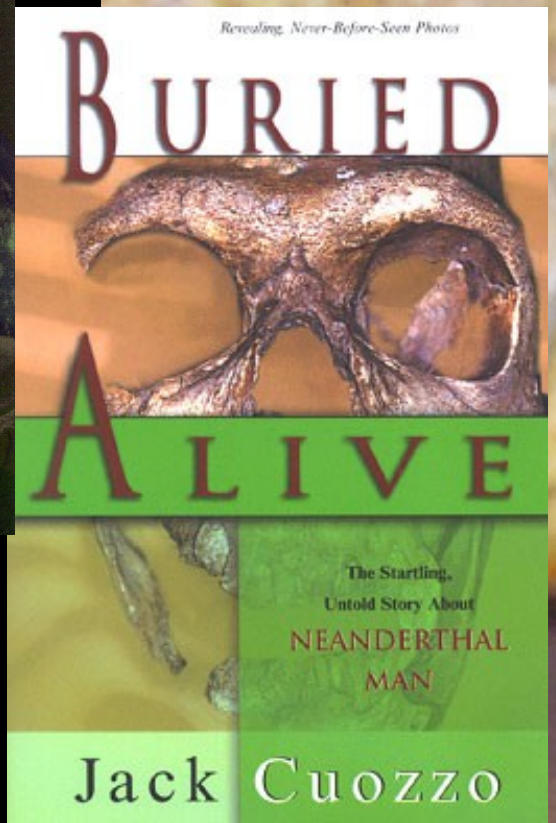

Neanderthals became more and more abundant in Europe and Asia, and by 70,000 years ago, they had become fairly common. Neanderthals cared for their injured and sick. They also commonly buried their dead and often placed food, weapons, and even flowers with the bodies. Such attention to the dead suggests that they may have believed in a life after death. Neanderthals were the first hominids to show evidence of abstract thinking.

Holt Biology 2004, p. 738

Is 'Lucy' alive and well and living in Sumatra?

BUSINESSES, academics, and a major conservation group are backing a British journalist's attempts to find a mysterious ape-like creature in the jungles of Sumatra.

Local villagers have long reported seeing the creature around the slopes of Sumatra's Mount Kerinci. Dr David Chivers, from Cambridge University, said he is convinced that the creature, known as Orang Pendek, is real.

The creature is described as a tail-less, short-haired, ape-like creature, up to 1.4 metres (4 feet 6 inches) tall, and which walks upright. London journalist Debbie Martyr says she has sighted it briefly several times and has made casts of its footprints.

The creature has banana-shaped feet, and each foot has four toes in an almost straight row, with a fifth, big toe, jutting to one side.

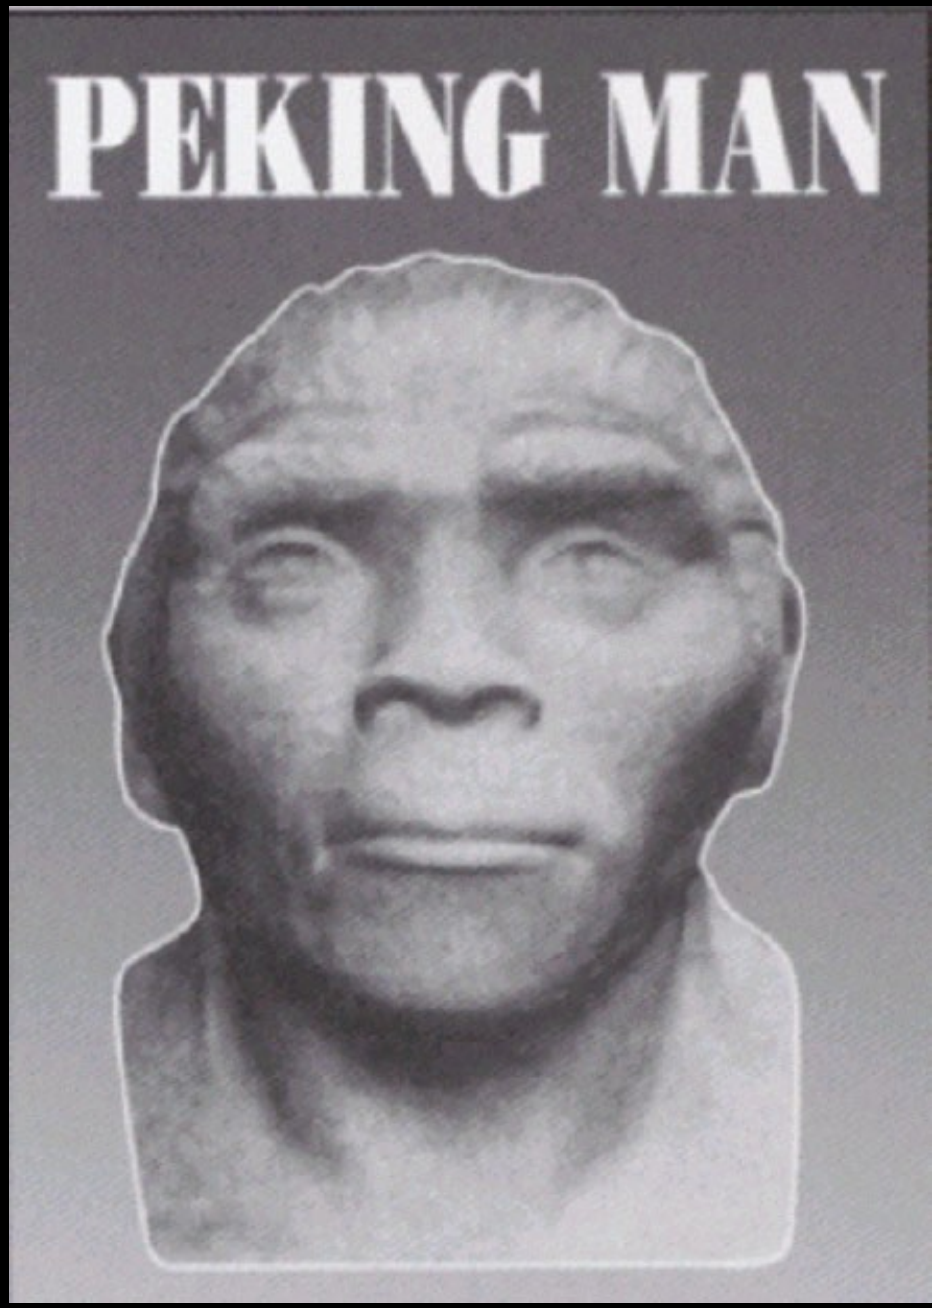

***Sunday Express* (London), October 8, 1995 (p. 2).**

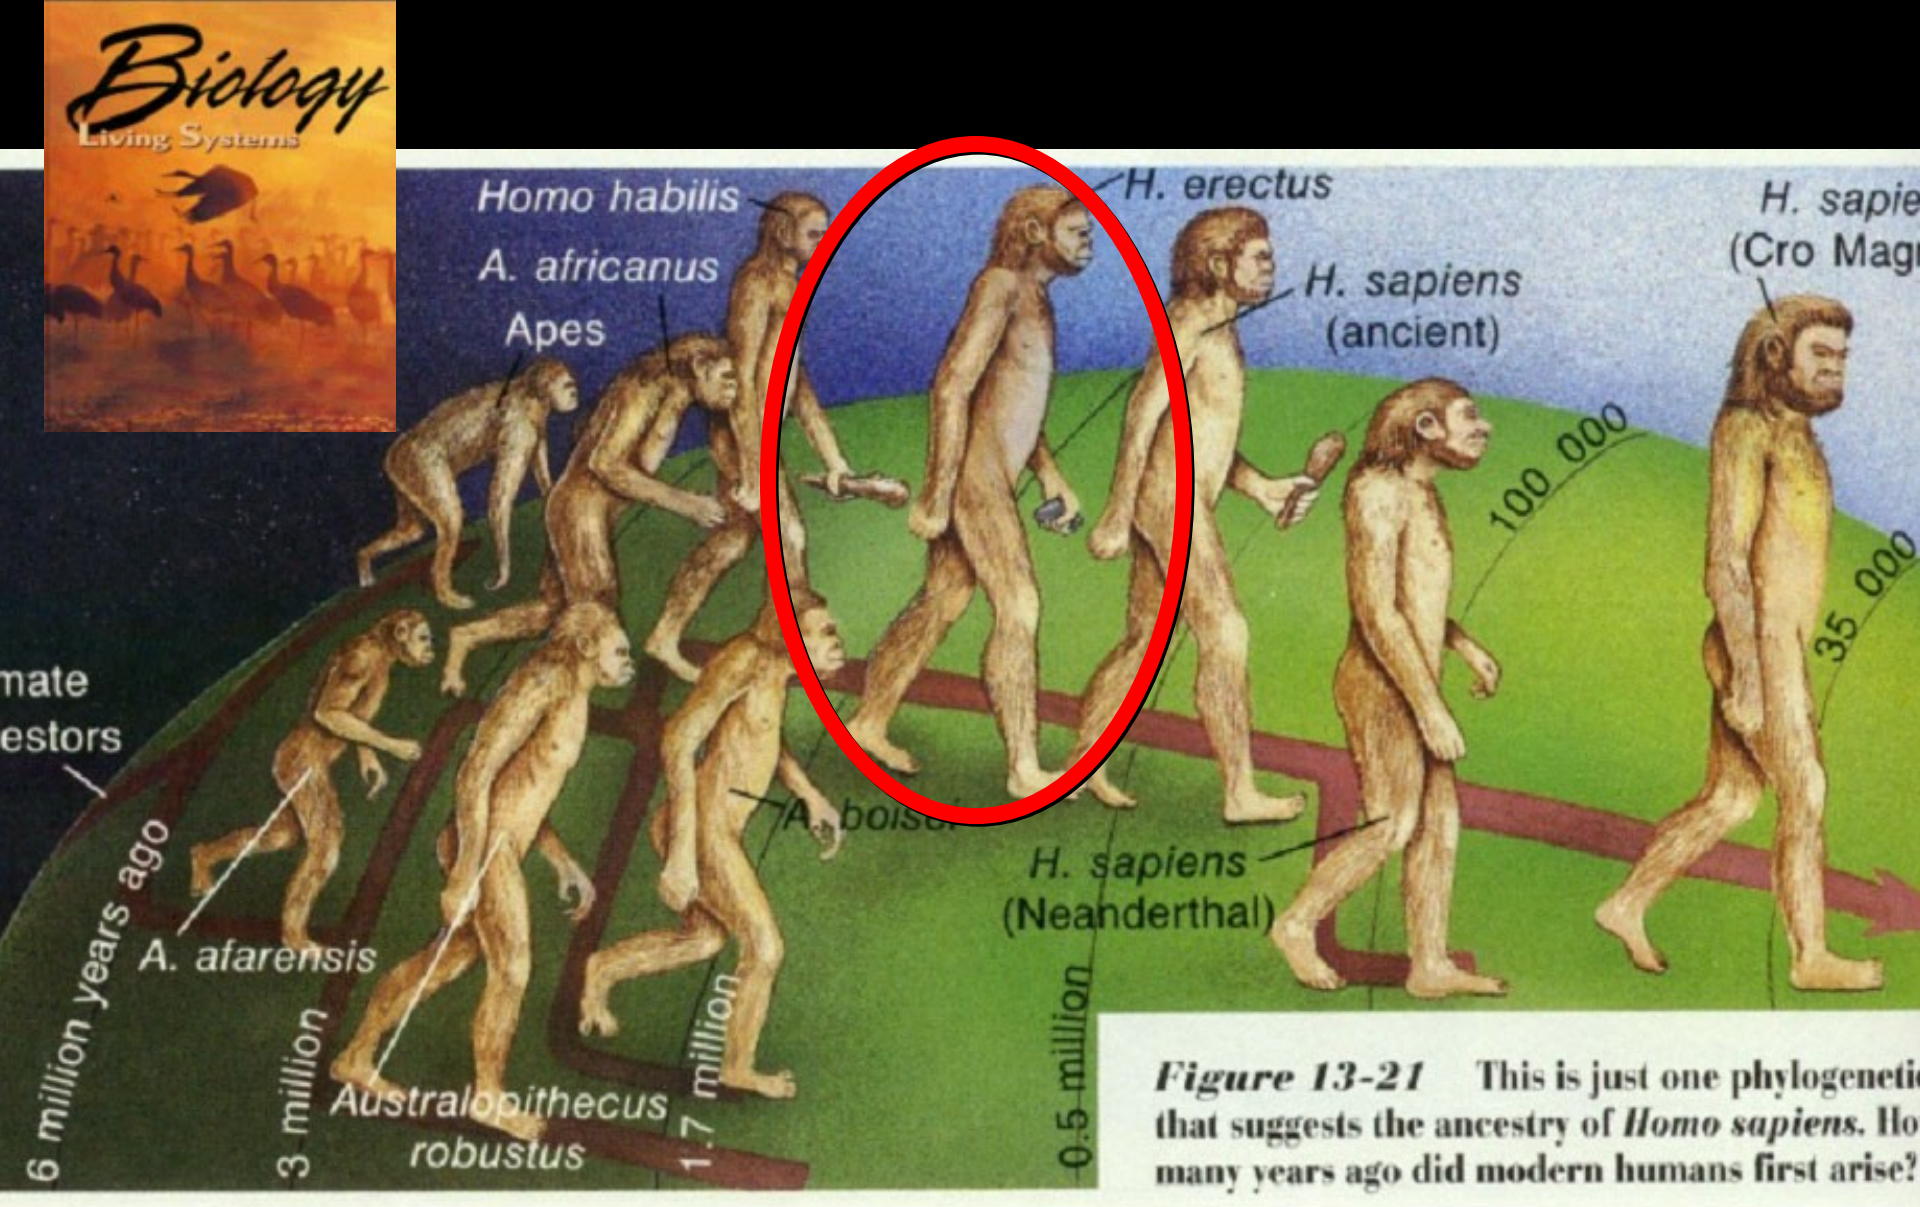

The descriptions and sketches of this creature bear a striking resemblance to those of the australopithecines — the fossil 'chimps' which evolutionists believe link ape-type creatures with humans. Evolutionists believe the australopithecines died out millions of years ago. If the Orang Pendeks in Sumatra turn out to be australopithecines, it will cause chaos in evolution's ranks.

“Peking Man” was made from pieces of skull found in the 1920’s in Peking, China. All evidence was lost in WW II.

Most people were never told that the remains of at least **10** humans were also found with these “monkey” bones so they could not possibly be a “missing

Homo erectus

Glencoe Biology, 1994 p. 358

Figure 28 ***Homo erectus.*** *Homo erectus* had large brow ridges and smaller teeth than *Homo habilis*.

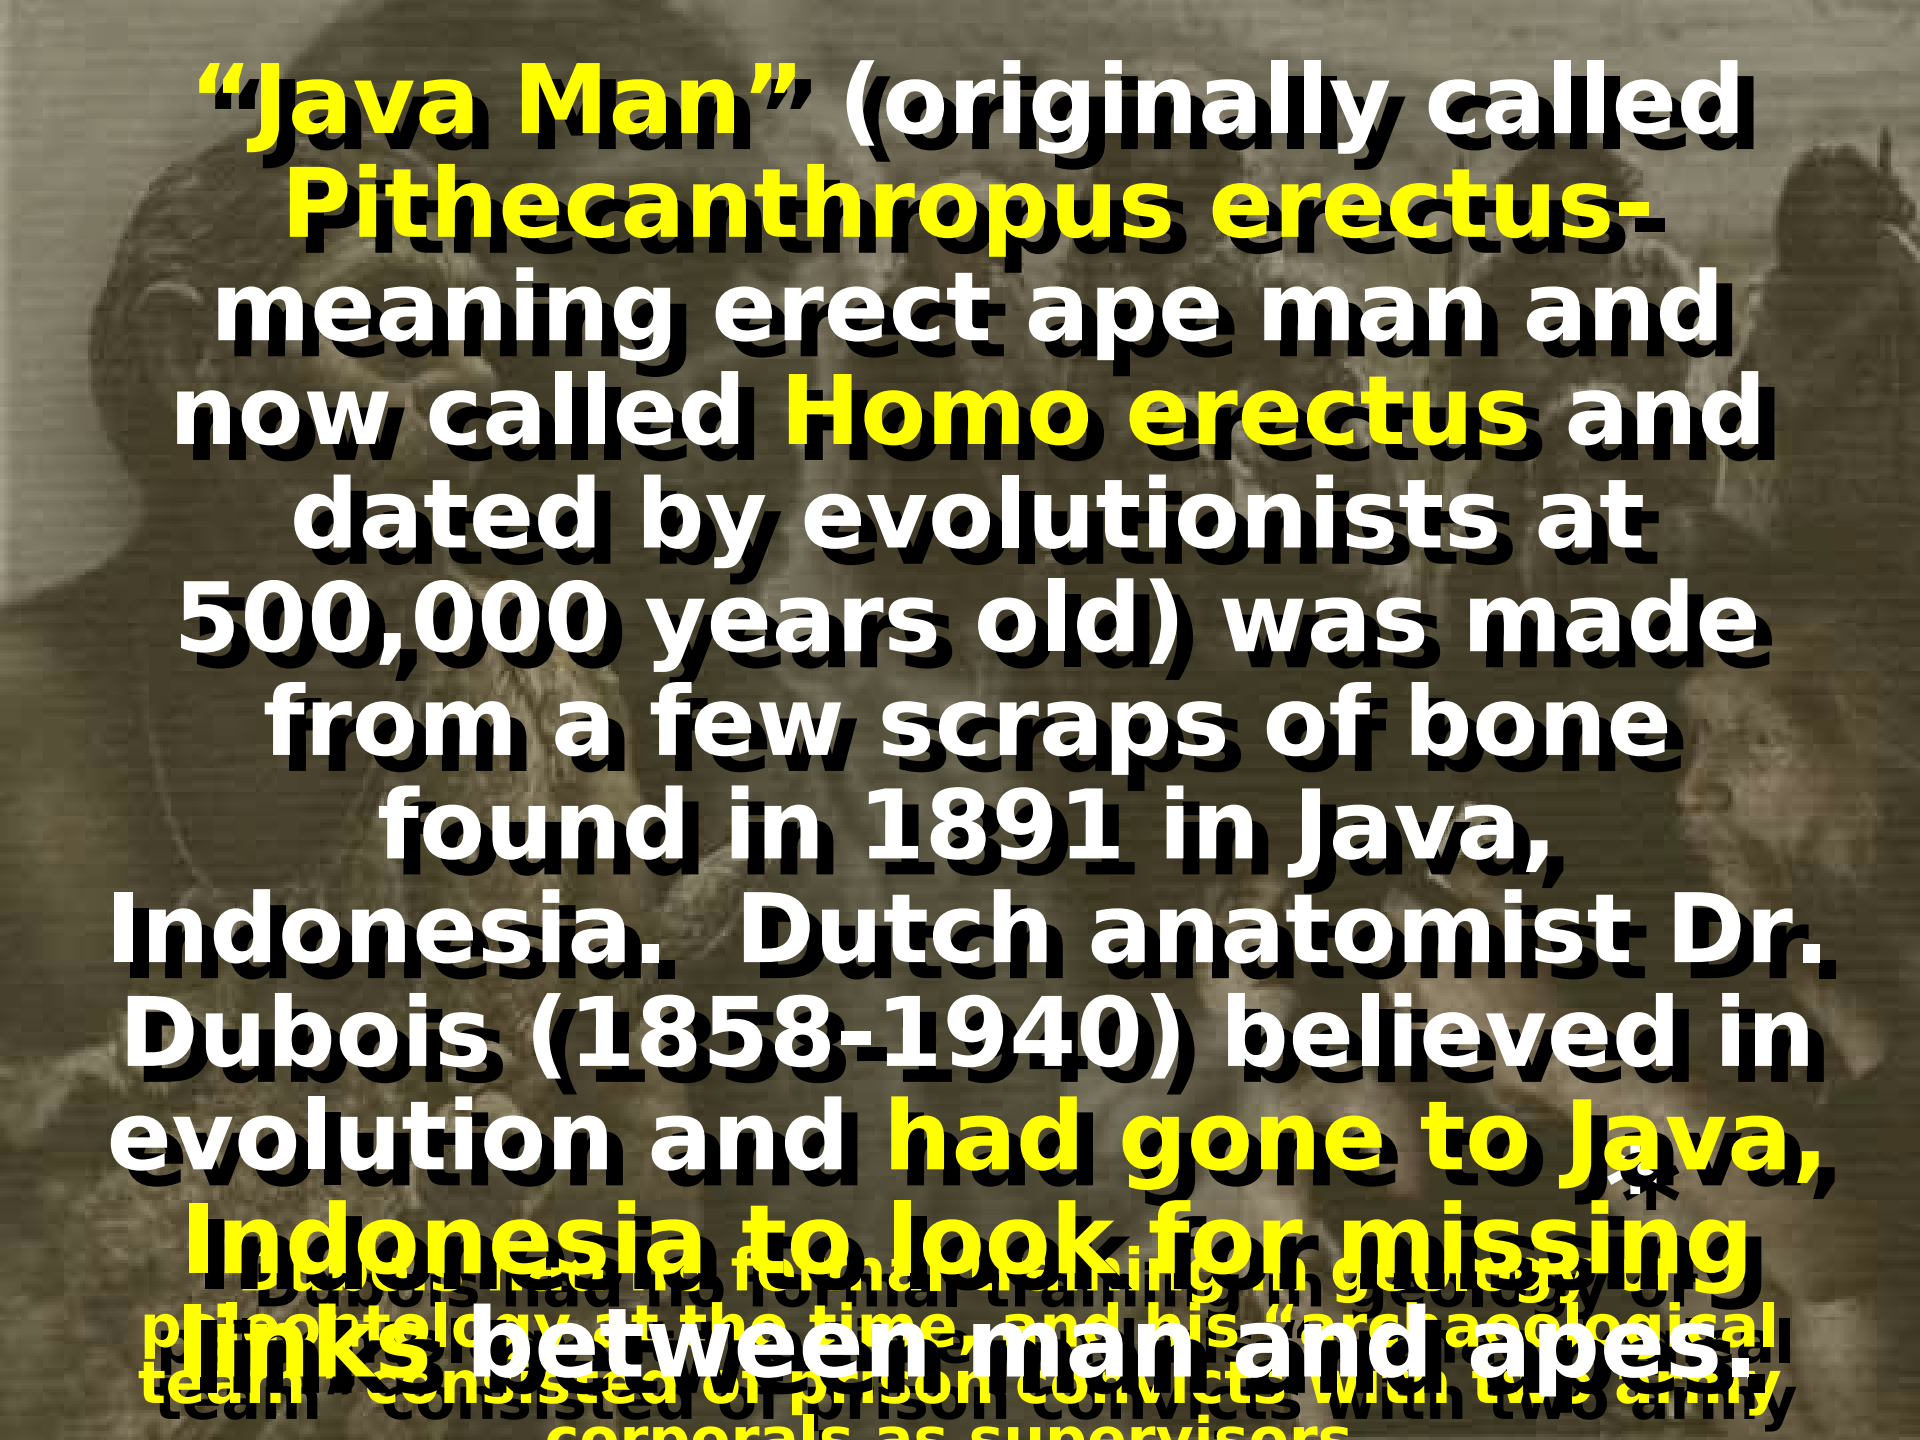

Homo erectus

Our understanding of *Homo habilis* is limited because it is based on only a few fossil specimens. In contrast, scientists have found many fossils of the species that replaced *Homo habilis*—the species *Homo erectus*.

The first *Homo erectus* specimen found, called Java Man, was discovered in 1891 on the island of Java, in southeast Asia. *Homo erectus* was larger than *Homo habilis*—about 1.5 m (5 ft) tall. *Homo erectus* also had a large brain of about 1,000 cm^3 (60 $in.^3$). Java Man may be more than about 700,000 years old. Similar fossils found in China are thought to be as old as 500,000 years. In 1976, a *Homo erectus* skull that may be 1.5 million years old was discovered in eastern Africa. **Figure 28** shows a fossil *Homo erectus* skull.

Homo erectus evolved in Africa and migrated into Asia and Europe, as shown in **Figure 29.** *Homo erectus* probably lived in groups of 20 to 50 individuals. They hunted large animals, used fire, and made both stone and bone tools. *Homo erectus* survived for more than 1 million years. The species disappeared about 200,000 years ago, as early modern humans emerged. Most scientists think that *Homo erectus* was the direct ancestor of our species, *Homo sapiens*.

Holt Biology 2004, p. 736

"Java Man" (originally called **Pithecanthropus erectus-** meaning erect ape man and now called **Homo erectus** and dated by evolutionists at 500,000 years old) was made from a few scraps of bone found in 1891 in Java, Indonesia. Dutch anatomist Dr. Dubois (1858-1940) believed in evolution and **had gone to Java, Indonesia to look for missing links between man and apes.**

Dubois had his formal training in geology and paleontology at the time, and his "archaeological team" consisted of prison convicts with two army corporals as supervisors.

Dubois took an ape's skull cap, and three human teeth plus a thigh bone (found a year later and 50 feet away) from a human and informed the world he had found the "missing link."

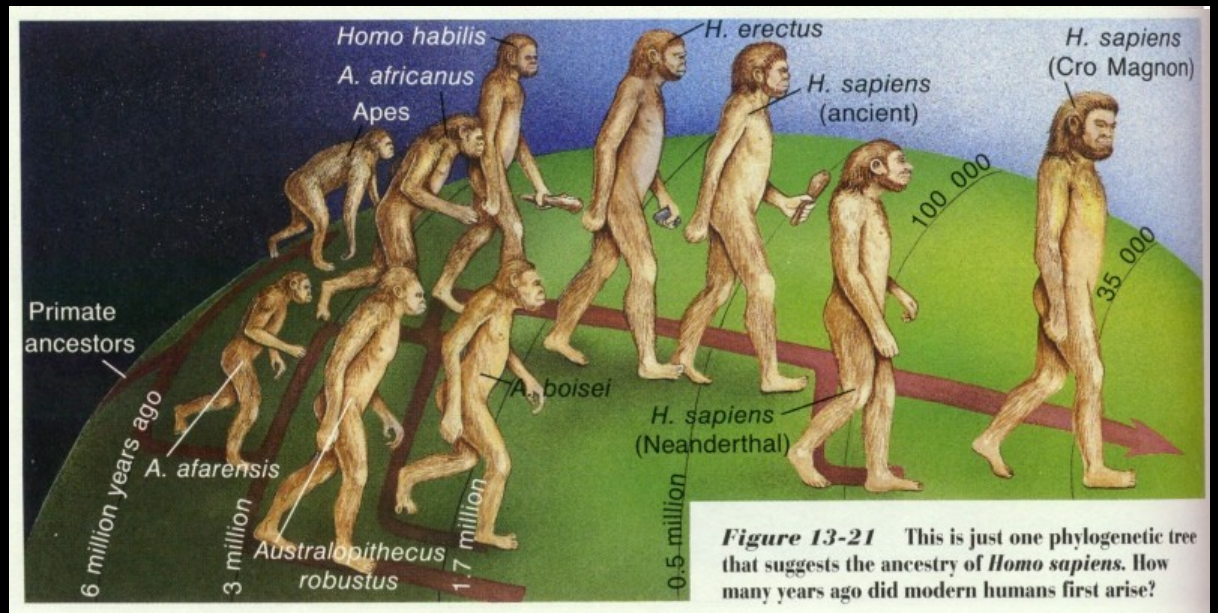

Figure 13-21 This is just one phylogenetic tree that suggests the ancestry of *Homo sapiens*. How many years ago did modern humans first arise?

The

Tennessee Evolution Case

conservatively estimated as 25,000 years old, while other species of extinct man date back to a period at least 100,000 years ago. In addition to several species of the genus homo, anthropologists distinguish three other genera of the man family (Hominidae): Pithecanthropus, Paleanthropus and Eoanthropus, all more primitive than any members of the genus Homo. A brief, but frank, statement about each of these links in the human pedigree is all that is necessary for our purposes.

The Java Man.

Pithecanthropus erectus.

This is the so-called Java man, formerly called the ape man or missing link, but now adjudged to be definitely human. The fossil remains consist of a complete calvarium or skull cap, three teeth and a left thigh bone. These were scattered over twenty yards of space and were discovered at different times. There is no proof that these remains belong to the same individ-

The Heidelberg Man.

Paleanthropus Heidelbergensis.

The genus and species, commonly known as the Heidelberg man, is based solely upon a single lower jaw in an excellent state of preservation, with all teeth in place. The strong points about this find are, first, that it was found in a stratum whose age had been well established; and second, that its discoverer ranks among the leading experts in the field. The age of this venerable relic has been determined as at least 400,000 years, a little more recent than Pithecanthropus. The jaw is very primitive, heavy and clumsily constructed as compared with that of modern man. It lacks the chin prominence, as does the jaw of the gorilla. The teeth are strictly human, though rather larger than those of modern man. This ape-like jaw with human teeth forms an authentic link in the series connecting man with the anthropoids.

P. 277

The entire court case is available from Bryan College 423-775-2041.

Was Hobbit human ancestor?

By Joseph B. Verrengia
THE ASSOCIATED PRESS

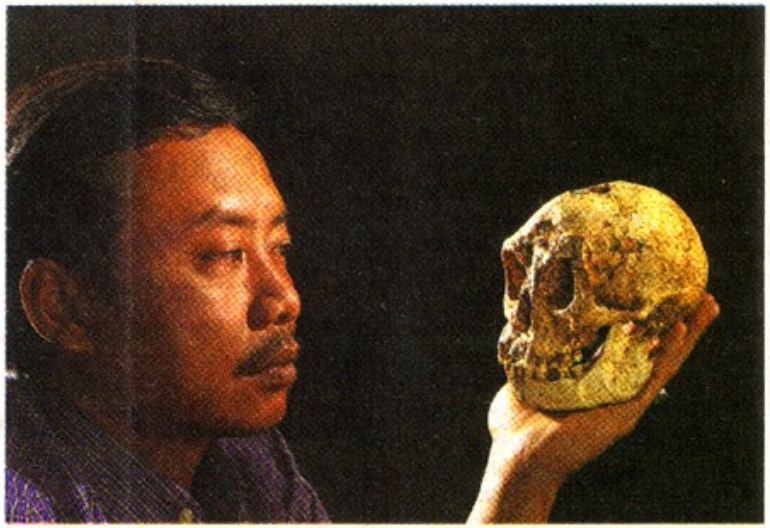

Scientists working with powerful imaging computers say the spectacular "Hobbit" fossil recently discovered in Indonesia had distinctive brain features that could justify its classification as a separate — and tiny — human ancestor.

The new report, published March 3 in the online journal Science Express, seems to support the idea of a sophisticated human dwarf species marooned for eons while modern man proliferated.

The new research produced a computer-generated model that compared surface impressions on the inside of the fossil skull with brain casts of modern and ancient humans, as well as chimps and other primates.

The scientists said the model shows that the 3-foot specimen, nicknamed Hobbit, had a brain unlike anything they had seen before in the human lineage. The brain is chimplike in size, about 417 cubic centimeters.

Yet the Hobbit's brain shared wrinkled surface features with the much larger brains of both modern humans and Homo erectus, a tool-making ancestor that lived in southeast Asia more than 1 million years ago. Some of those brain features are consistent with higher cognitive traits.

AP PHOTO

Thomas Sutikna of the Indonesian Centre for Archaeology in Jakarta, Indonesia, holds a skull fossil Oct. 15 that he and fellow scientists believe represents a new human species. The tiny specimen has been nicknamed Hobbit.

These brain features coincide with physical evidence of advanced behaviors, such as hunting, firemaking and the use of stone tools, which were found alongside the bones in a cave on the remote equatorial island of Flores. To some, this suggests an organized society of tiny hunters flourished on the island for millennia at a time when modern humans dominated the planet.

"This is a unique creature," said Florida State University anthropologist Dean Falk, who led the study. "We found amazing, specialized features across the surface from front to back.

"These findings are consistent with the kinds of sophisticated behaviors that are hypothesized" for the Hobbit, Falk said, but she stopped short of saying the Hobbit was a tool-maker.

In October, scientists from Indonesia and Australia caused an international sensation with their report of a trove of tiny fossils. As many as eight individuals were represented in layers that were dated from 95,000 to 12,000 years ago. The Hobbit skeleton was the most complete specimen and contained the only skull.

In a project funded by the National Geographic Society, Falk and researchers from Washington University in St. Louis created a three-dimensional computer model of the brain using CT scans of the interior of the Hobbit's skull. These images show the wrinkles, vessels and other surface features that made faint impressions on the skull's lining.

They compared that model with the brains of chimps, a female Homo erectus, a contemporary woman, a pygmy and a European specimen of a person with a small-brain syndrome known as microcephaly.

Scientists say its brain shape is most closely associated with that of Homo erectus.

Secondary microcephaly dwarfism*.

discovered by a joint Australian-Indonesian team of paleoanthropologists and archaeologists looking on Flores for evidence of the original human migration of *H. sapiens* from Asia into Australia. They were not expecting to find a new species, and were quite surprised at the recovery of the remains of at least seven individuals from the *H. sapiens* Liang Bua limestone cave on Flores. An arm bone, provisionally assigned to *H. floresiensis*, is about 74,000 years old. Also widely present in this cave are sophisticated stone implements of a size considered appropriate to the 1 m tall human: these are at horizons from 95,000 to 13,000 years and are associated with juvenile *Stegodon*, presumably the prey of Flores Man.

Was Hobbit human ancestor?

By Joseph B. Verrengia
THE ASSOCIATED PRESS

Scientists working with powerful imaging computers say the spectacular "Hobbit" fossil recently discovered in Indonesia had distinctive brain features that could justify its classification as a separate — and tiny — human ancestor.

The new report, published March 3 in the online journal Science Express, seems to support the idea of a sophisticated human dwarf species marooned for eons while modern man proliferated.

The new research produced a computer-generated model that compared surface impressions on the inside of the fossil skull with brain casts of modern and ancient humans, as well as chimps and other primates.

The scientists said the model shows that the 3-foot specimen, nicknamed Hobbit, had a brain unlike anything they had seen before in the human lineage. The brain is chimplike in size, about 417 cubic centimeters.

Yet the Hobbit's brain shared wrinkled surface features with the much larger brains of both modern humans and Homo erectus, a tool-making ancestor that lived in southeast Asia more than 1 million years ago. Some of those brain features are consistent with higher cognitive traits.

These brain features coincide with physical evidence of advanced behaviors, such as hunting, firemaking and the use of stone tools, which were found alongside the bones in a cave on the remote equatorial island of Flores. To some, this suggests an organized society of tiny hunters flourished on the island for millennia at a time when modern humans dominated the planet.

"This is a unique creature," said Florida State University anthropologist Dean Falk, who led the study. "We found amazing, specialized features across the surface from front to back.

"These findings are consistent with the kinds of sophisticated behaviors that are hypothesized" for the Hobbit, Falk said, but she stopped short of saying the Hobbit was a tool-maker.

In October, scientists from Indonesia and Australia caused an international sensation with their report of a trove of tiny fossils. As many as eight individuals were represented in layers that were dated from 95,000 to 12,000 years ago. The Hobbit skeleton was the most complete specimen and contained the only skull.

In a project funded by the National Geographic Society, Falk and researchers from Washington University in St. Louis created a three-dimensional computer model of the brain using CT scans of the interior of the Hobbit's skull. These images show the wrinkles, vessels and other surface features that made faint impressions on the skull's lining.

They compared that model with the brains of chimps, a female Homo erectus, a contemporary woman, a pygmy and a European specimen of a person with a small-brain syndrome known as microcephaly.

Scientists say its brain shape is most closely associated with that of Homo erectus.

AP PHOTO

Thomas Sutikna of the Indonesian Centre for Archaeology in Jakarta, Indonesia, holds a skull fossil Oct. 15 that he and fellow scientists believe represents a new human species. The tiny specimen has been nicknamed Hobbit.

The specimens are not fossilized, but were described in a *Nature* news article as having "the consistency of wet blotting paper". Researchers hope to find preserved mitochondrial DNA to compare with samples from similarly unfossilised specimens of *Homo neanderthalensis* and *H. sapiens*. The likelihood of there being preserved DNA is, however, low, as it degrades more rapidly in warm tropical environments; in such conditions it is known to degrade in as little as a few dozen years.

All of the so-called **“cave-men”** are dealt with in great detail in this book.

African skulls reveal ancestors 160,000 years ago

He's the daddy of us all

By **James Chapman**
Science Correspondent

THEY walked the Earth an astonishing 160,000 years ago. And they are the ancestors of every human being on Earth, scientists believe.

Now, in the wake of the discovery of the oldest human remains ever, so-called Herto Man is finally giving up his secrets. An international team of scientists believes that three fossilised skulls unearthed in Ethiopia date precisely from the time of a genetic 'Adam and Eve'.

They say they represent a crucial stage of evolution when the facial features of modern humans arose. 'This set of fossils is stupendous,' said Professor Clark Howell, of the University of California, one member of the scientific team. 'This is a truly revolutionary scientific discovery.'

Professor Chris Stringer, head of human origins at the Natural

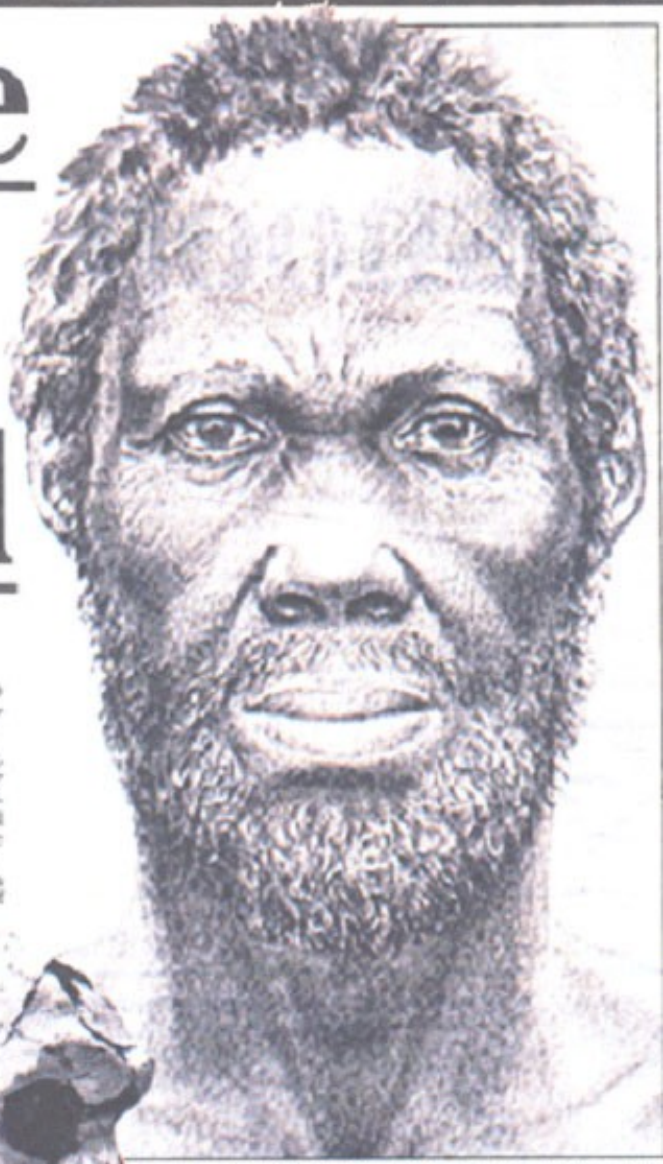

Crucial stage of evolution

History Museum in London, said the finds were "some of the most significant discoveries of early Homo sapiens so far".

The skulls, details of which are reported today in the scientific journal Nature, were found near the village of Herto, about 140 miles north-

Two of the skulls were of adults, while the third belonged to a child. The

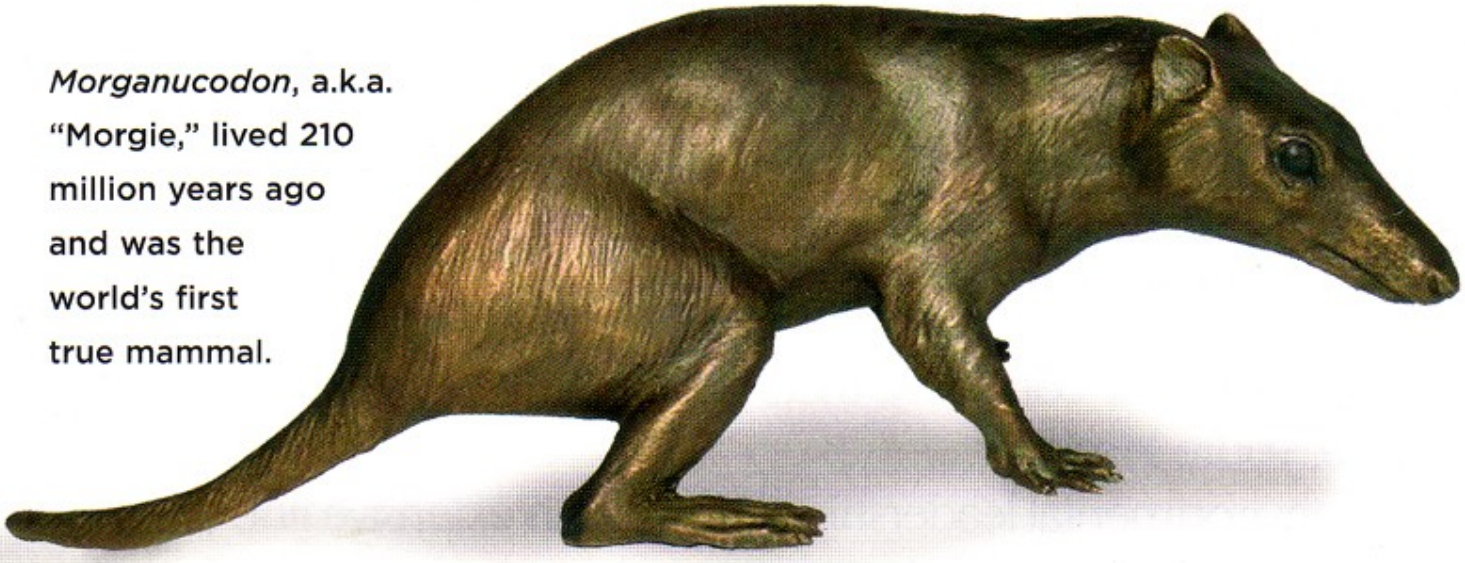

An impression of Herto Man (above) and his skull

The Neanderthals finally died out about 30,000 years ago. In contrast, the newly-discovered skulls have modern features – a prominent forehead, flattened face

scientists have identified the fossils as the same species as modern humans but appended a subspecies name – Homo sapiens idaltu – to differentiate them from contemporary humans, Homo sapiens sapiens.

Oxygen boosts polar giants

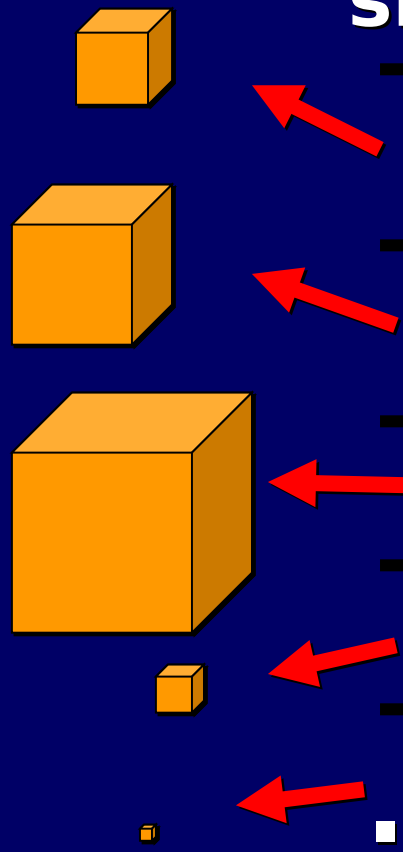

Pallasea cancellus is an opportunistic predator

Some animals living near the poles become super-sized monsters compared to their lower-latitude cousins and now scientists know why - they have more oxygen to breathe.

Antarctic sea spiders, for example, can be over 30

As an object gets larger it has less surface area (skin) compared to its volume. This is why huge insects can't breathe in today's atmosphere.

side	Volume	Surface area	Surface area to Volume ratio
1	1	6	6 to 1
2	8	24	3 to 1
3	27	54	2 to 1

Giant gander found in Australia

David Fickling in Sydney, Friday August 16, 2002 The Guardian

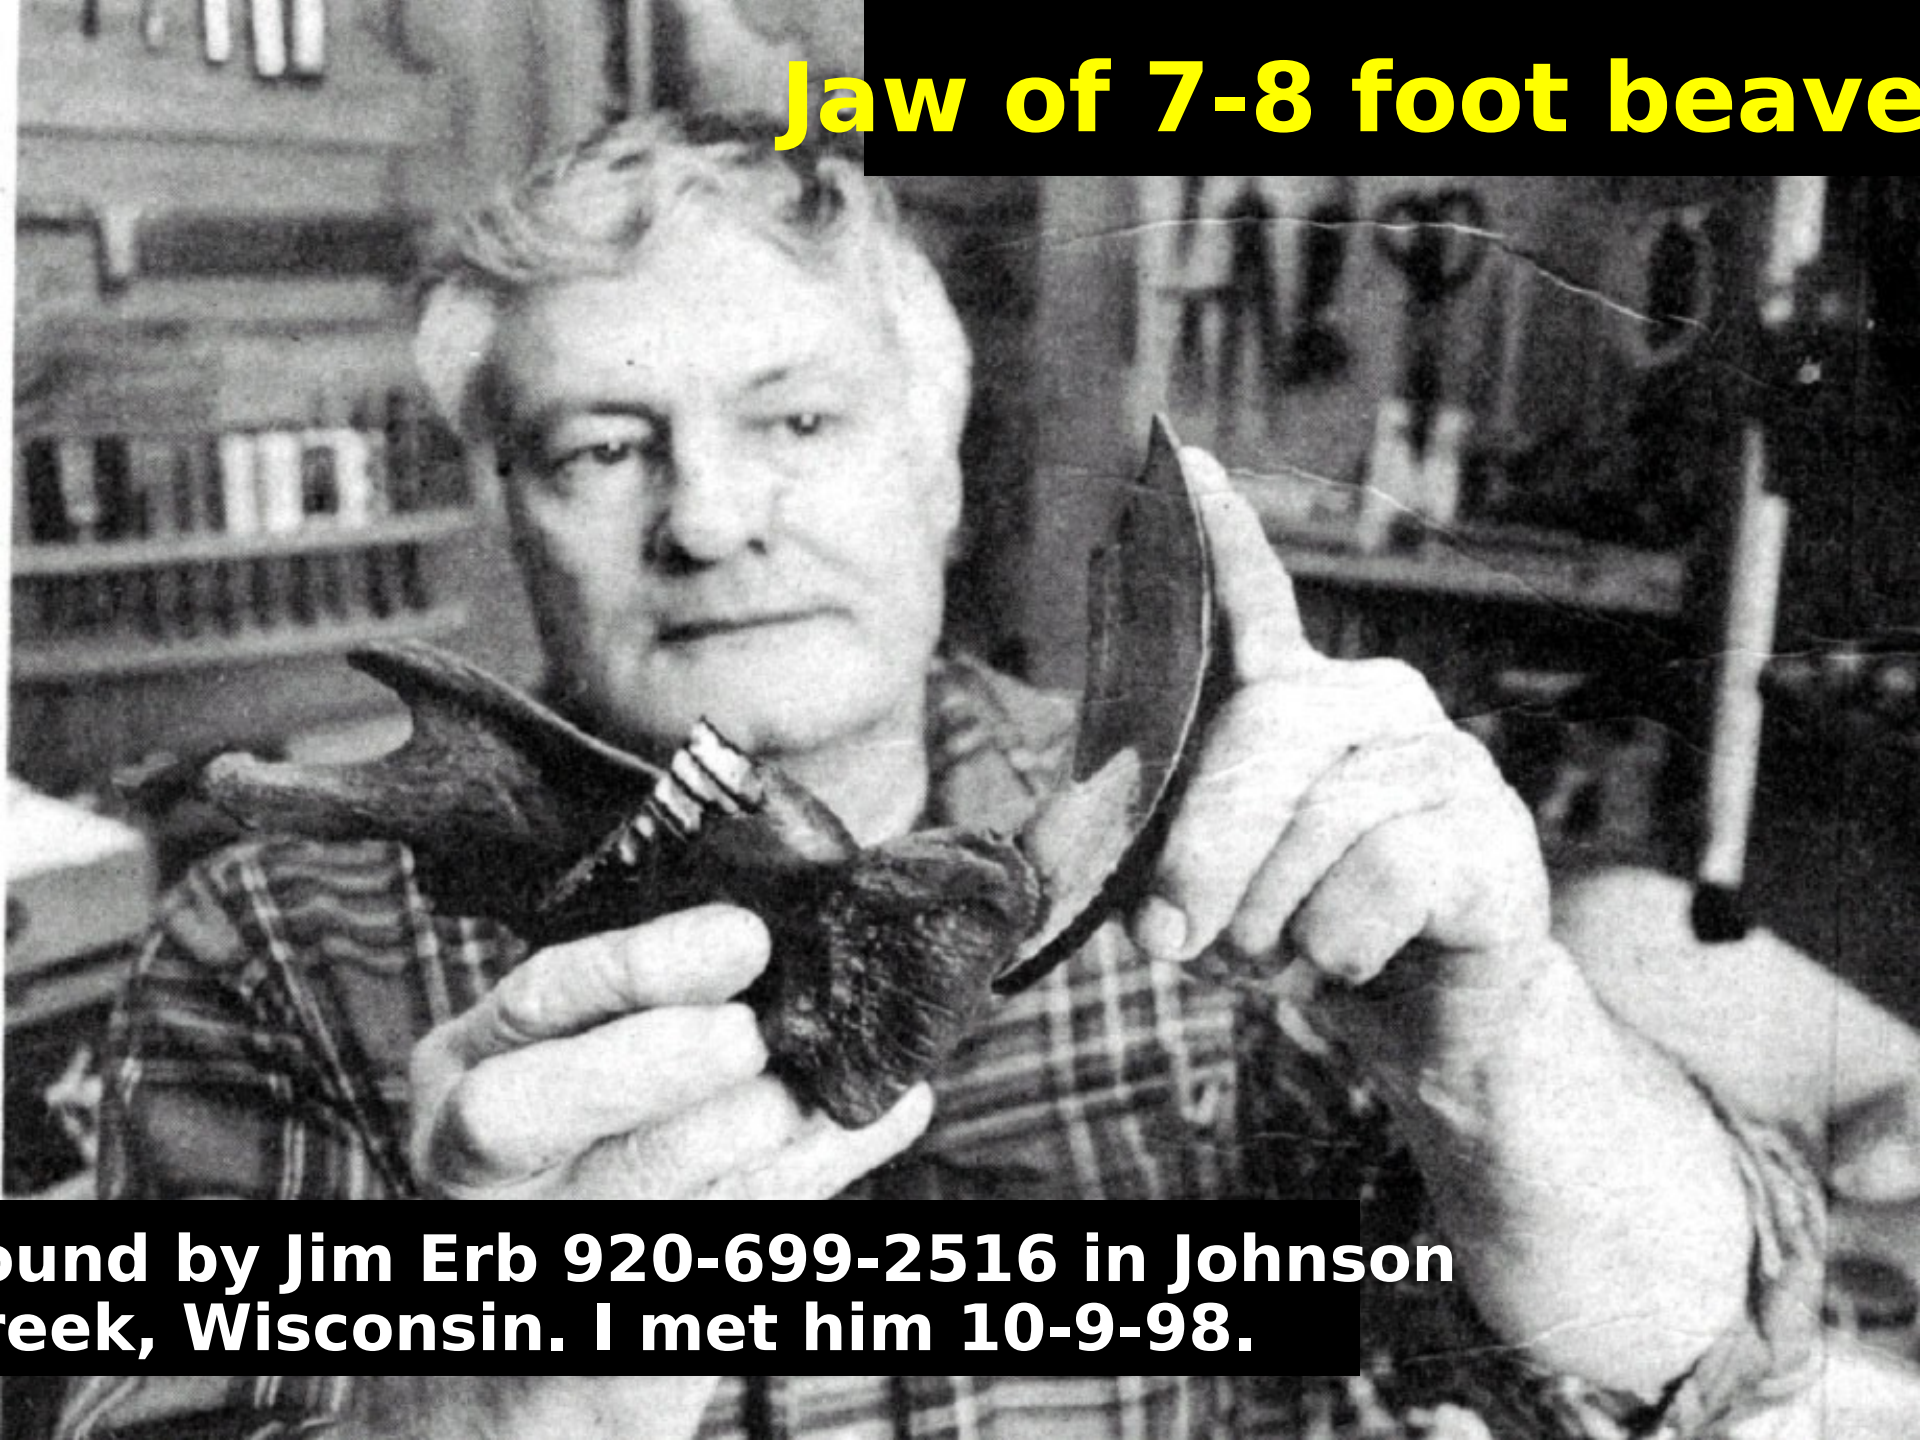

Scientists in central Australia have discovered fossils of a giant prehistoric goose which stood as tall as an elephant and weighed up to half a tonne. The flightless birds are thought to have browsed on leaves, fruit and seed pods, although some scientists say their powerful beaks could have been used to eat meat.

They have been named dromornithids - running birds - because of their apparent agility. Most appear to have had springing ligaments in their legs similar to those found in horses, and unlike modern ostriches and emus, the huge dromornithids balanced on horse-like hooves.

One of the geese discovered is thought to have lived in Australia until 35,000 years ago, well after first humans arrived on the continent. But there is no evidence yet that they were hunted by early Aborigines. “You would instinctively have stayed miles away from them,” said Peter Murray of the Museum of Central Australia in Alice Springs. “They were big and agile and had nasty beaks. Some of the

ocation: Dinosaur Valley State Park, Glen Rose, Texas

Dinosaur Valley State Park, Glen Rose, Texas

This largest block went to the AMERICAN MUSEUM

Tommy Pendley photo

from cover of *Dinosaur Valley State Park*

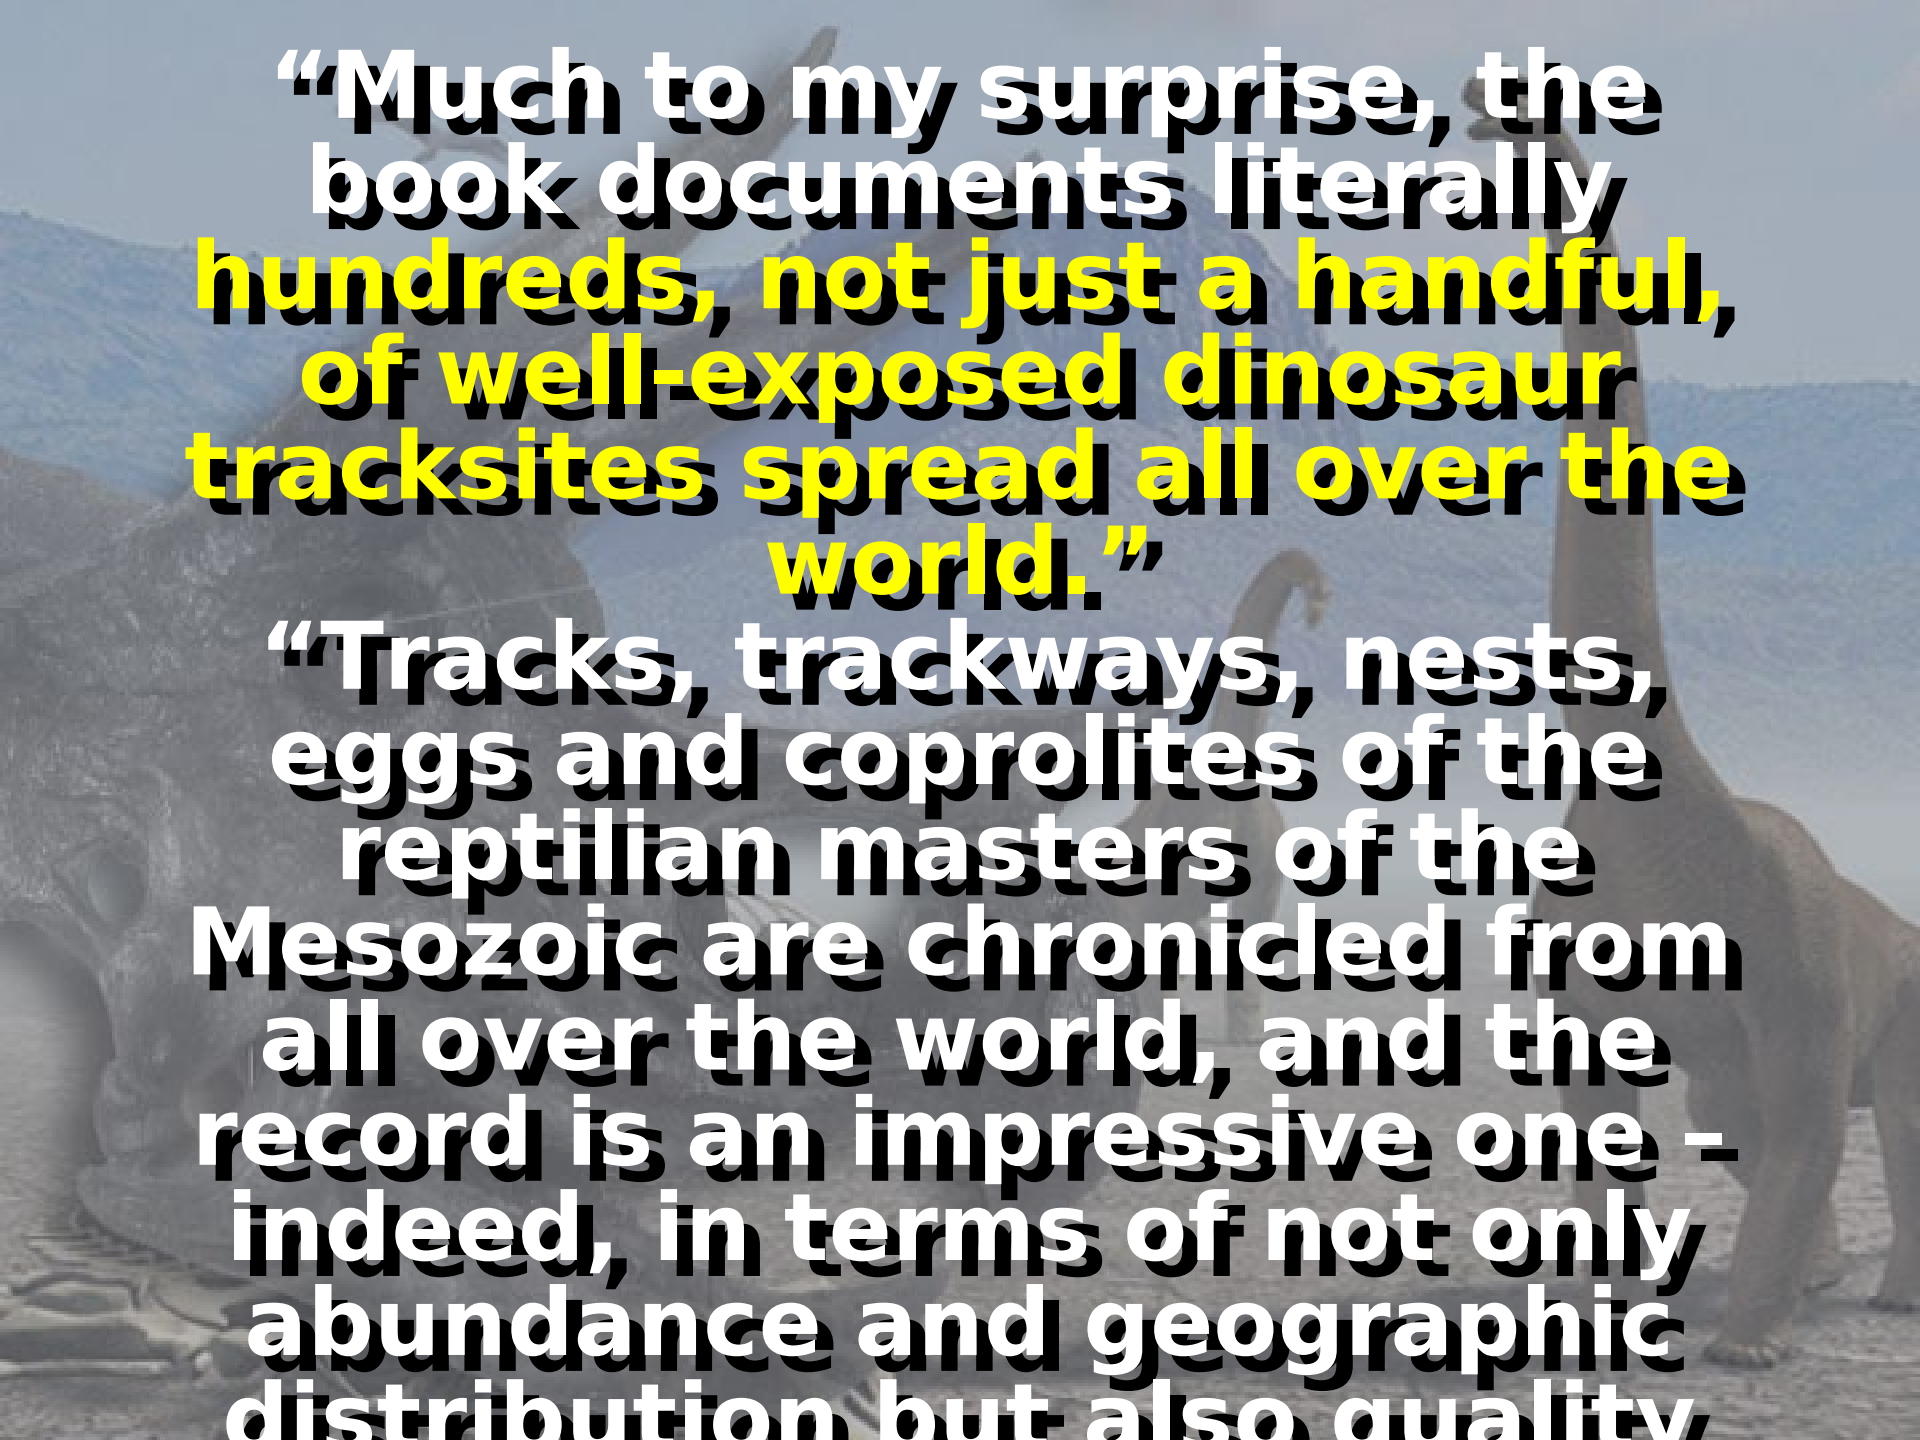

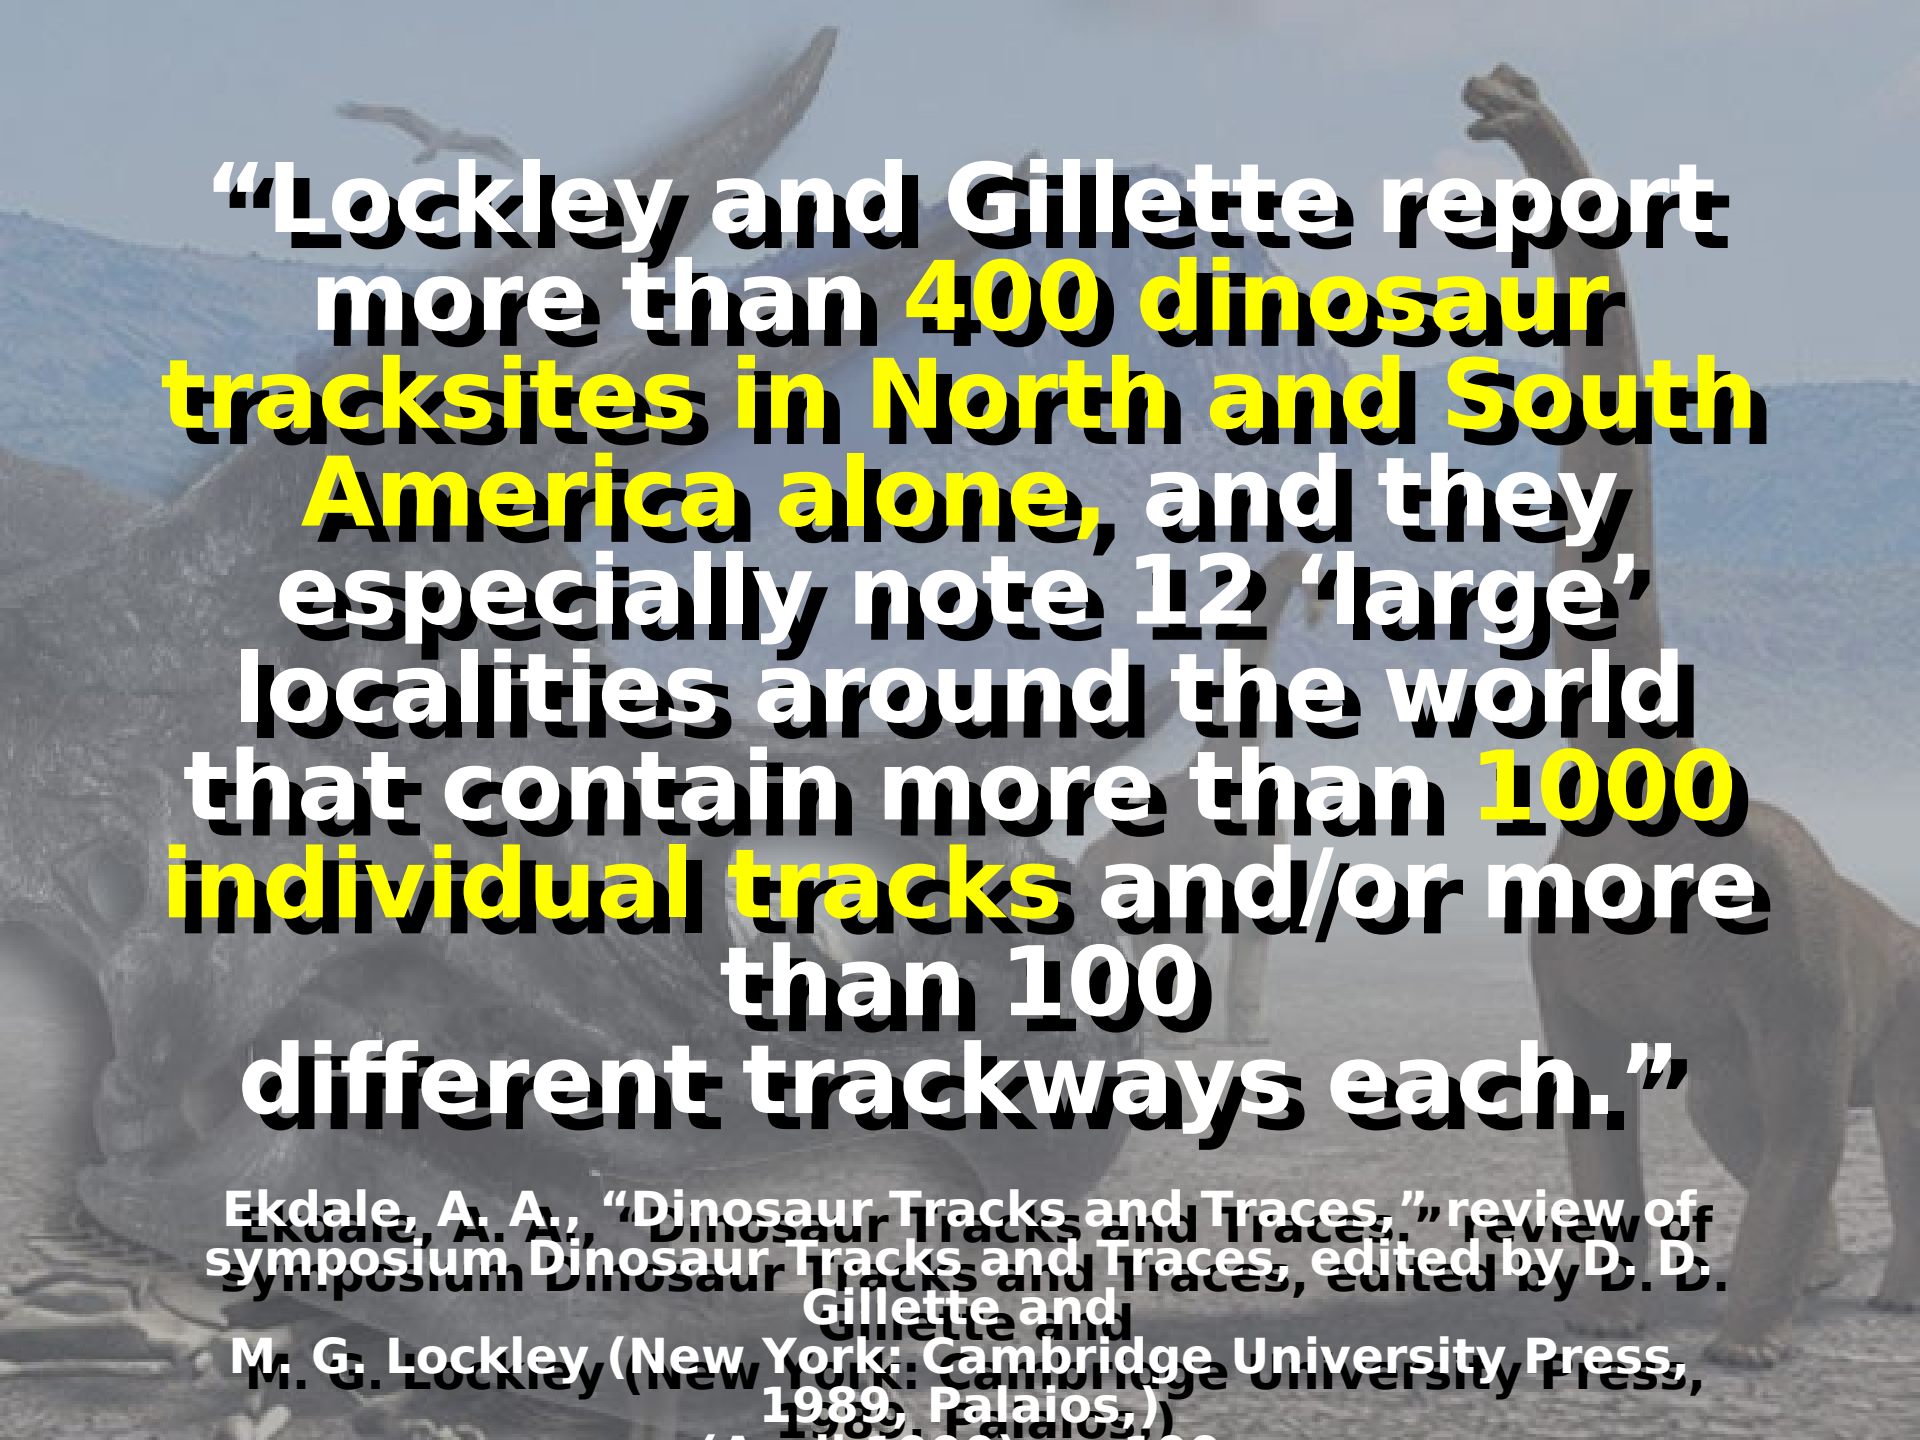

In 1930 Roland T. Bird, field explorer for the American Field Museum, reported 15-20 (50 cm) inch long "clearly defined" human footprints with the dinosaur tracks.

Photo from *Valley of the Giants,*
by Dr. Cecil Dougherty p. 4

(Dr Dougherty was a chiropractor in Glen Rose for 17 years and spent thousands of hours studying and photographing the human tracks there.)

“Much to my surprise, the book documents literally hundreds, not just a handful, of well-exposed dinosaur tracksites spread all over the world.”
“Tracks, trackways, nests, eggs and coprolites of the reptilian masters of the Mesozoic are chronicled from all over the world, and the record is an impressive one – indeed, in terms of not only abundance and geographic distribution but also quality

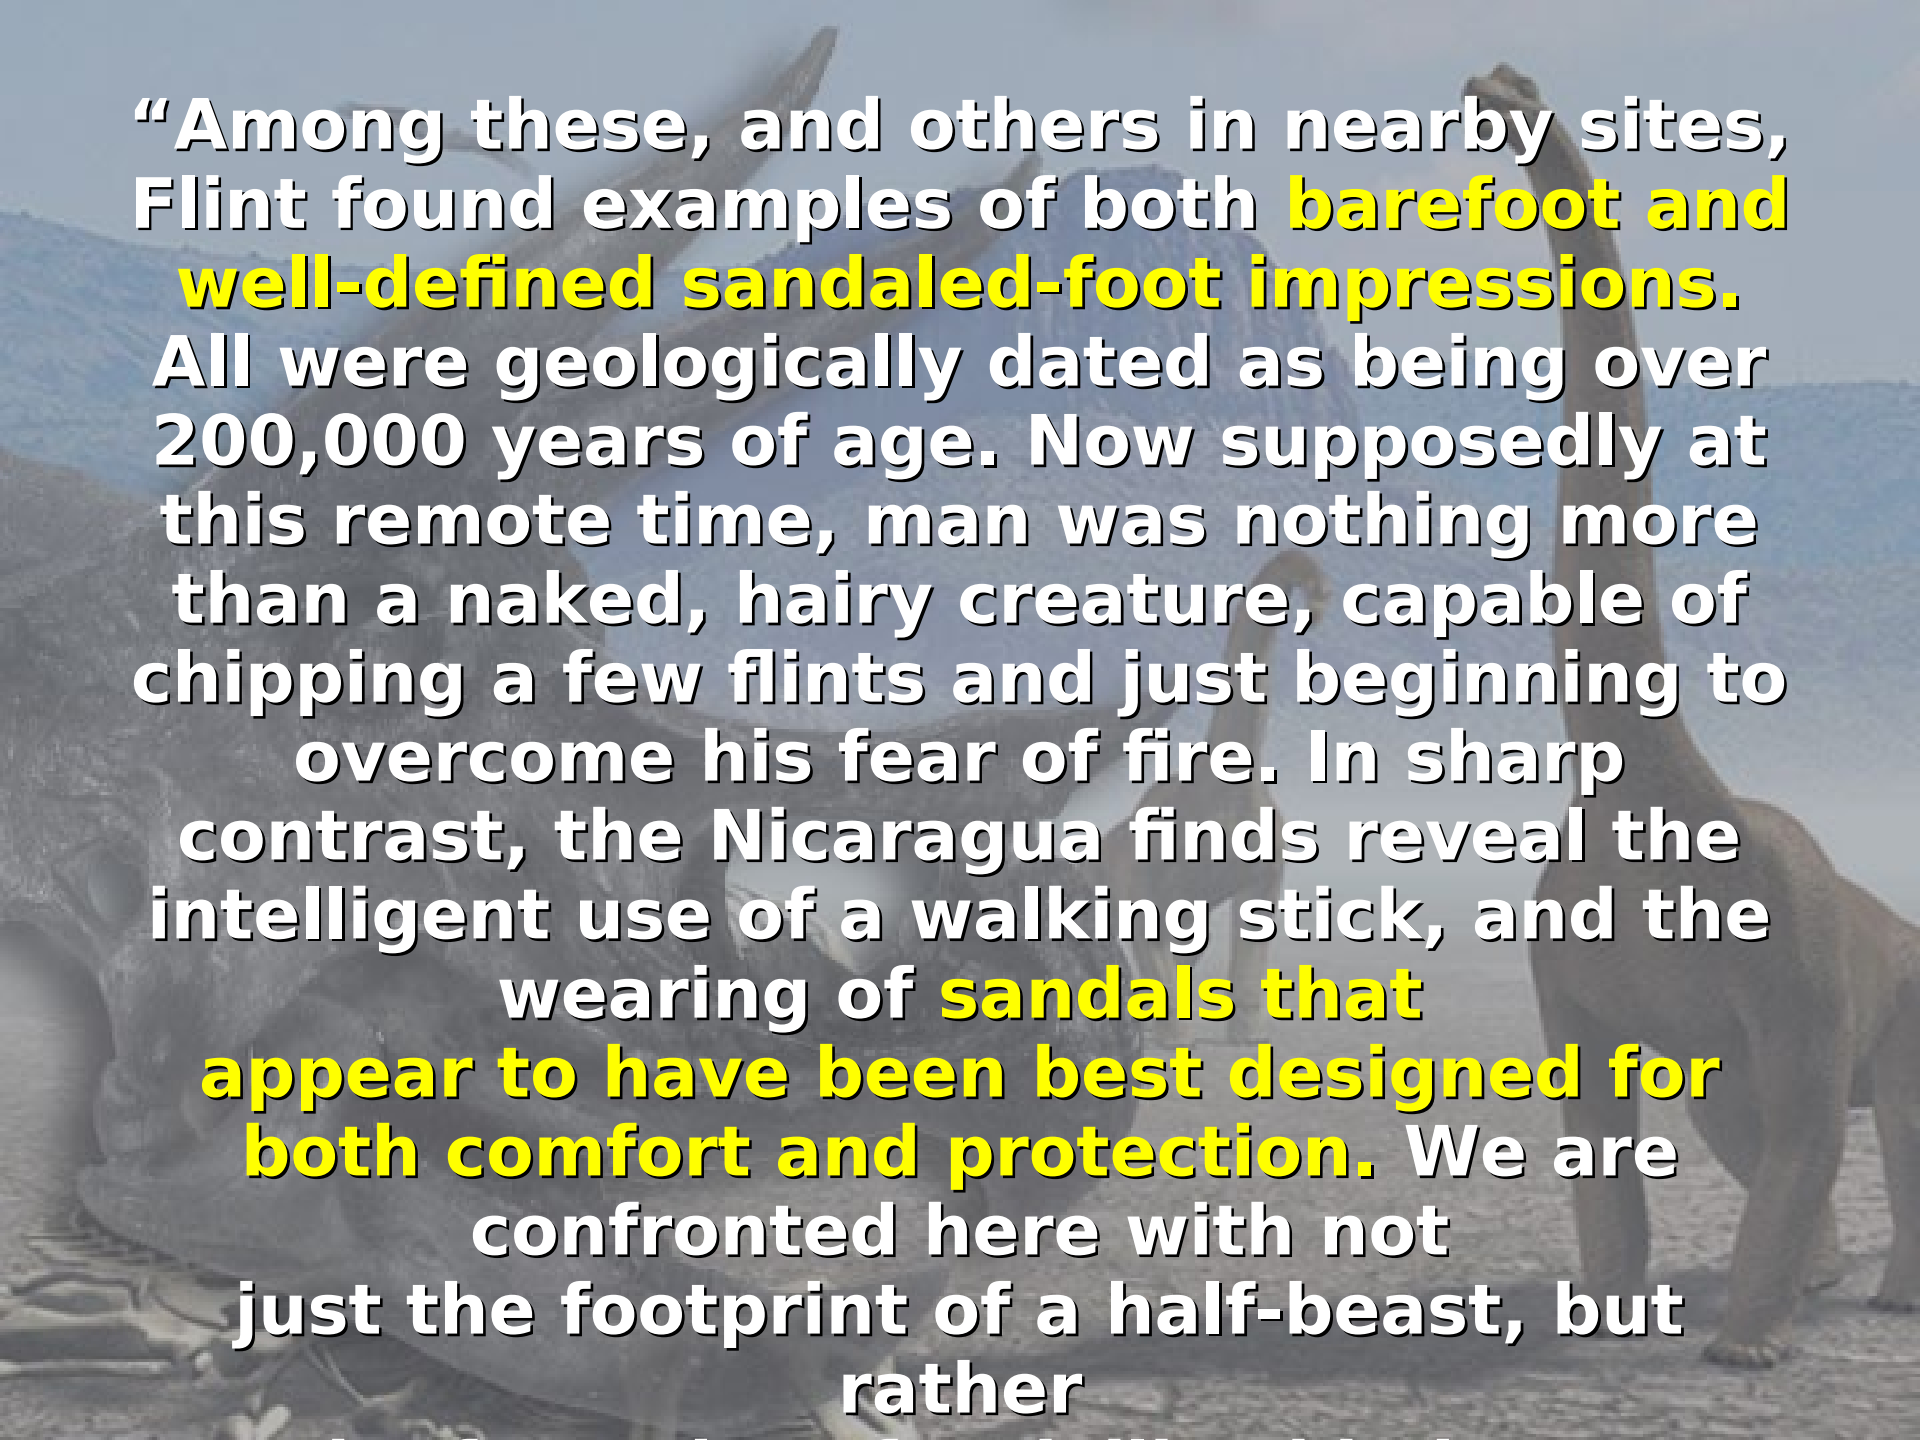

“Lockley and Gillette report more than 400 dinosaur tracksites in North and South America alone, and they especially note 12 ‘large’ localities around the world that contain more than 1000 individual tracks and/or more than 100 different trackways each.”

Ekdale, A. A., “Dinosaur Tracks and Traces,” review of symposium Dinosaur Tracks and Traces, edited by D. D. Gillette and
M. G. Lockley (New York: Cambridge University Press, 1989, Palaios,)

In 1884, Earl Flint, a geologist representing the Peabody Museum and Harvard University, discovered in a rock quarry near Managua, Nicaragua, on the shores of Lake Gilva, a layer containing fossilized human tracks, 16 to 24 feet below the surface. Flint described the tracks in these words, written in 1884:

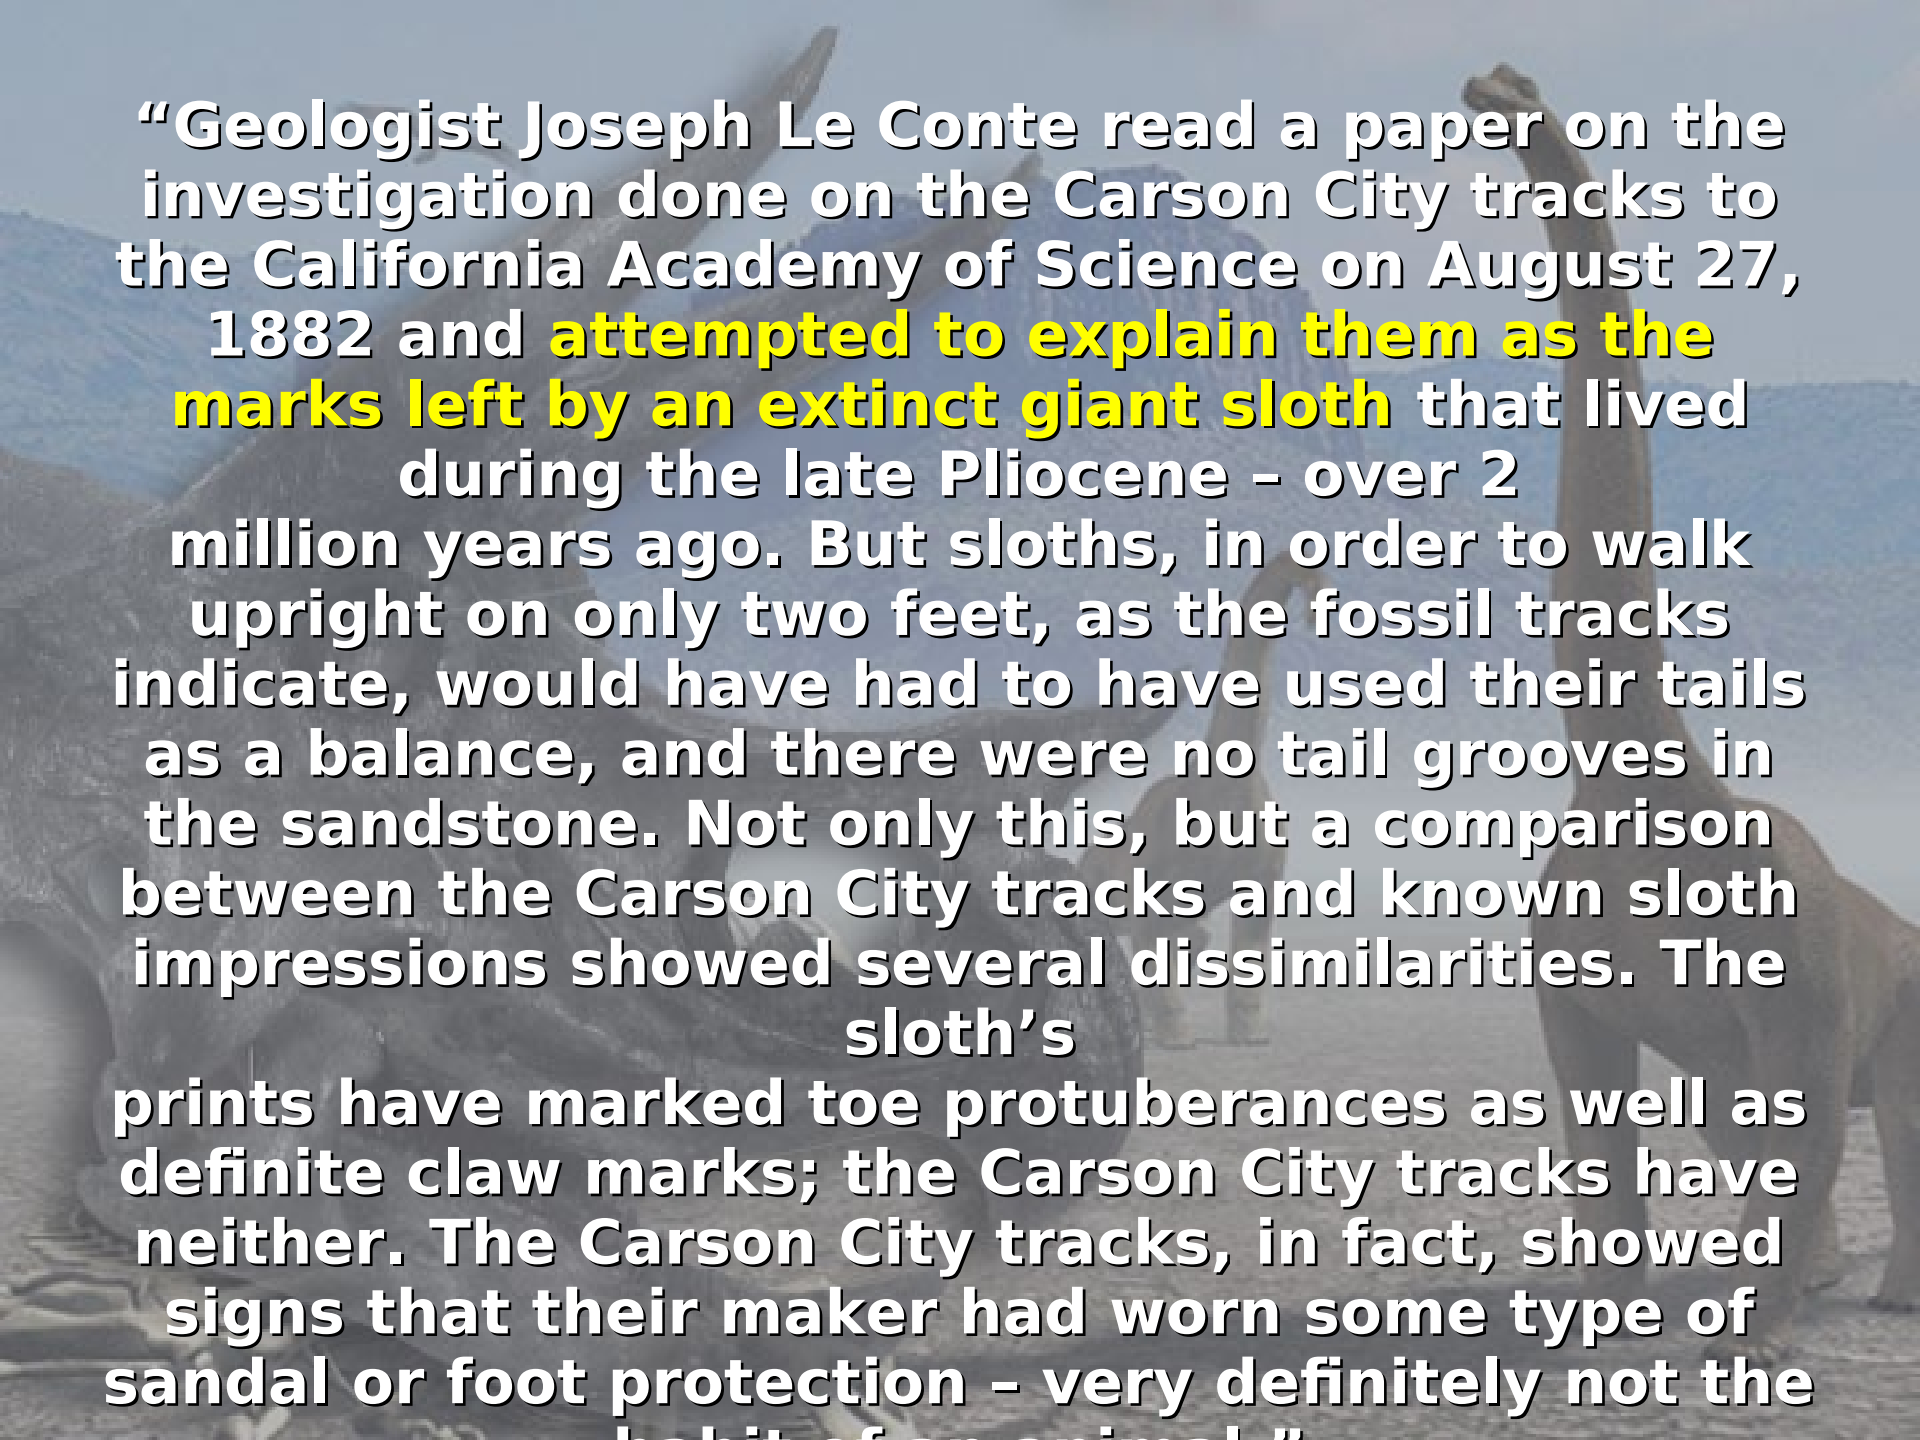

“The footprints are from one-half to three inches in depth and none exceeded eighteen inches. Some of the impressions are nearly closed, the soft surface falling back into the impression, and a crevice about two inches in width is all one sees, and my first glance at some parallel to one less deep, gave me an idea that the owner of the latter was using a stave to assist him in walking. In some the substance flowed outward, leaving a ridge around it - seen in one secured for the museum; the stride is variable, owing to the size of the person, and the changing nature of the surface passed over. The longest one uncovered was seventeen inches, length of foot ten inches, and width four inches, feet arched, steps in a right line, measured from center of heel to center of great toe over three steps.

The people making them were going both ways

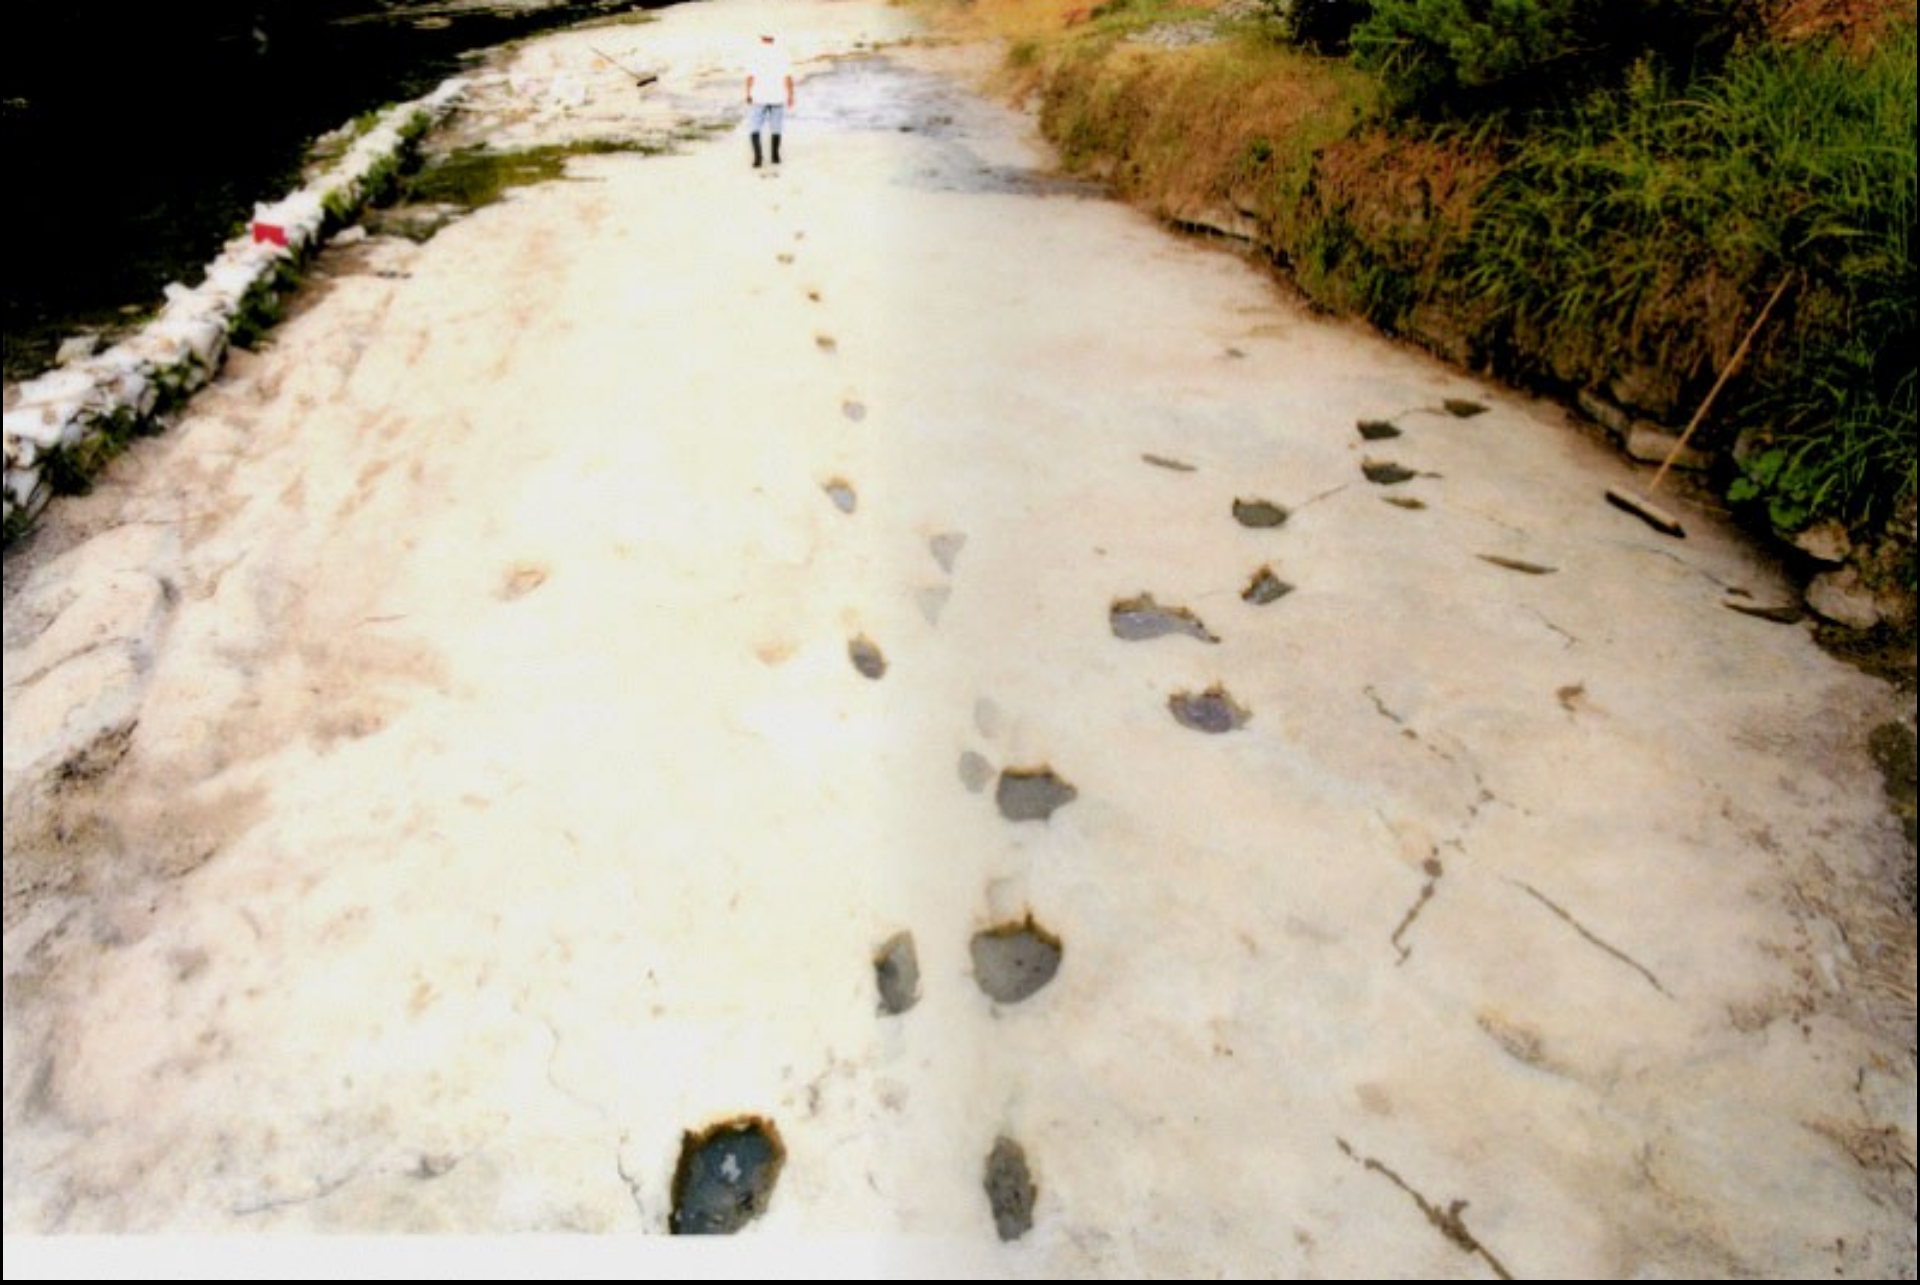

“Among these, and others in nearby sites, Flint found examples of both **barefoot and well-defined sandaled-foot impressions.** All were geologically dated as being over 200,000 years of age. Now supposedly at this remote time, man was nothing more than a naked, hairy creature, capable of chipping a few flints and just beginning to overcome his fear of fire. In sharp contrast, the Nicaragua finds reveal the intelligent use of a walking stick, and the wearing of **sandals that appear to have been best designed for both comfort and protection.** We are confronted here with not just the footprint of a half-beast, but rather

“Two years earlier, in the summer of 1882, inmates working in the quarry at the State Prison near Carson City, Nevada, brought to light a layer of sandstone covered with fossilized animal tracks, among them a number having belonged to the extinct mammoth. What caused considerable scientific consternation, however, was the fact that several human tracks were also found. The tracks were in six series, each with alternate right and left tracks. The stride was from two and a half to over three feet, and the individual prints were from 18 to 20 inches in length – that of a giant. The straddle – the distance between the lines of left and right prints – was 18 to 19 inches.”

“Geologist Joseph Le Conte read a paper on the investigation done on the Carson City tracks to the California Academy of Science on August 27, 1882 and attempted to explain them as the marks left by an extinct giant sloth that lived during the late Pliocene – over 2 million years ago. But sloths, in order to walk upright on only two feet, as the fossil tracks indicate, would have had to have used their tails as a balance, and there were no tail grooves in the sandstone. Not only this, but a comparison between the Carson City tracks and known sloth impressions showed several dissimilarities. The sloth’s prints have marked toe protuberances as well as definite claw marks; the Carson City tracks have neither. The Carson City tracks, in fact, showed signs that their maker had worn some type of sandal or foot protection – very definitely not the

from *Valley of the Giants,* by Dr. Cecil Doughert y p. 54

***Dinosaur,* by Carl Baugh, (254) 897-3200**

Dear Dr. Hovind,

NOV 27, 1995

What a delightful pleasure it is to see God's hand so involved in your ministry. My name is David Smith and I am an Associate Pastor at Cottonwood, Arizona. I had the privilege to see you in person when you were in Gilbert, Arizona. At your seminar you mentioned Glen Rose and Dinosaur State Valley Park. I grew up in Glen Rose and one year while I was in High School I had the honor of going on one of Dr. Carl Bahl's excavations. On this particular dig, we followed the footsteps of a man which were beside a dinosaur's footprints. It was as if the man was walking beside the dinosaur because the prints were in the same rock layer and very close together with the dinosaur's. NOVA was there to film the dig. There was also an evolutionist there who had been arguing with Dr. Bahl the entire time. NOVA didn't film much of the tracks or our dig but did interview this evolutionist. He made some remark about the tracks having been man made though they had been previously under over 16 in. of rock and told them he had not seen anything that would disprove evolution. What he didn't tell the camera was that he had refused to even turn around and look at the tracks we had been working on. He stood with his back to the dig and the tracks while making these statements. NOVA knew this man had not looked at the tracks but did not report that nor did they give Dr. Bahl equal air time to respond. This is a classic example of how censored and distorted television can be when it comes to creation and how truly unscientific a scientist who believes in evolution can be.

Sincerely,

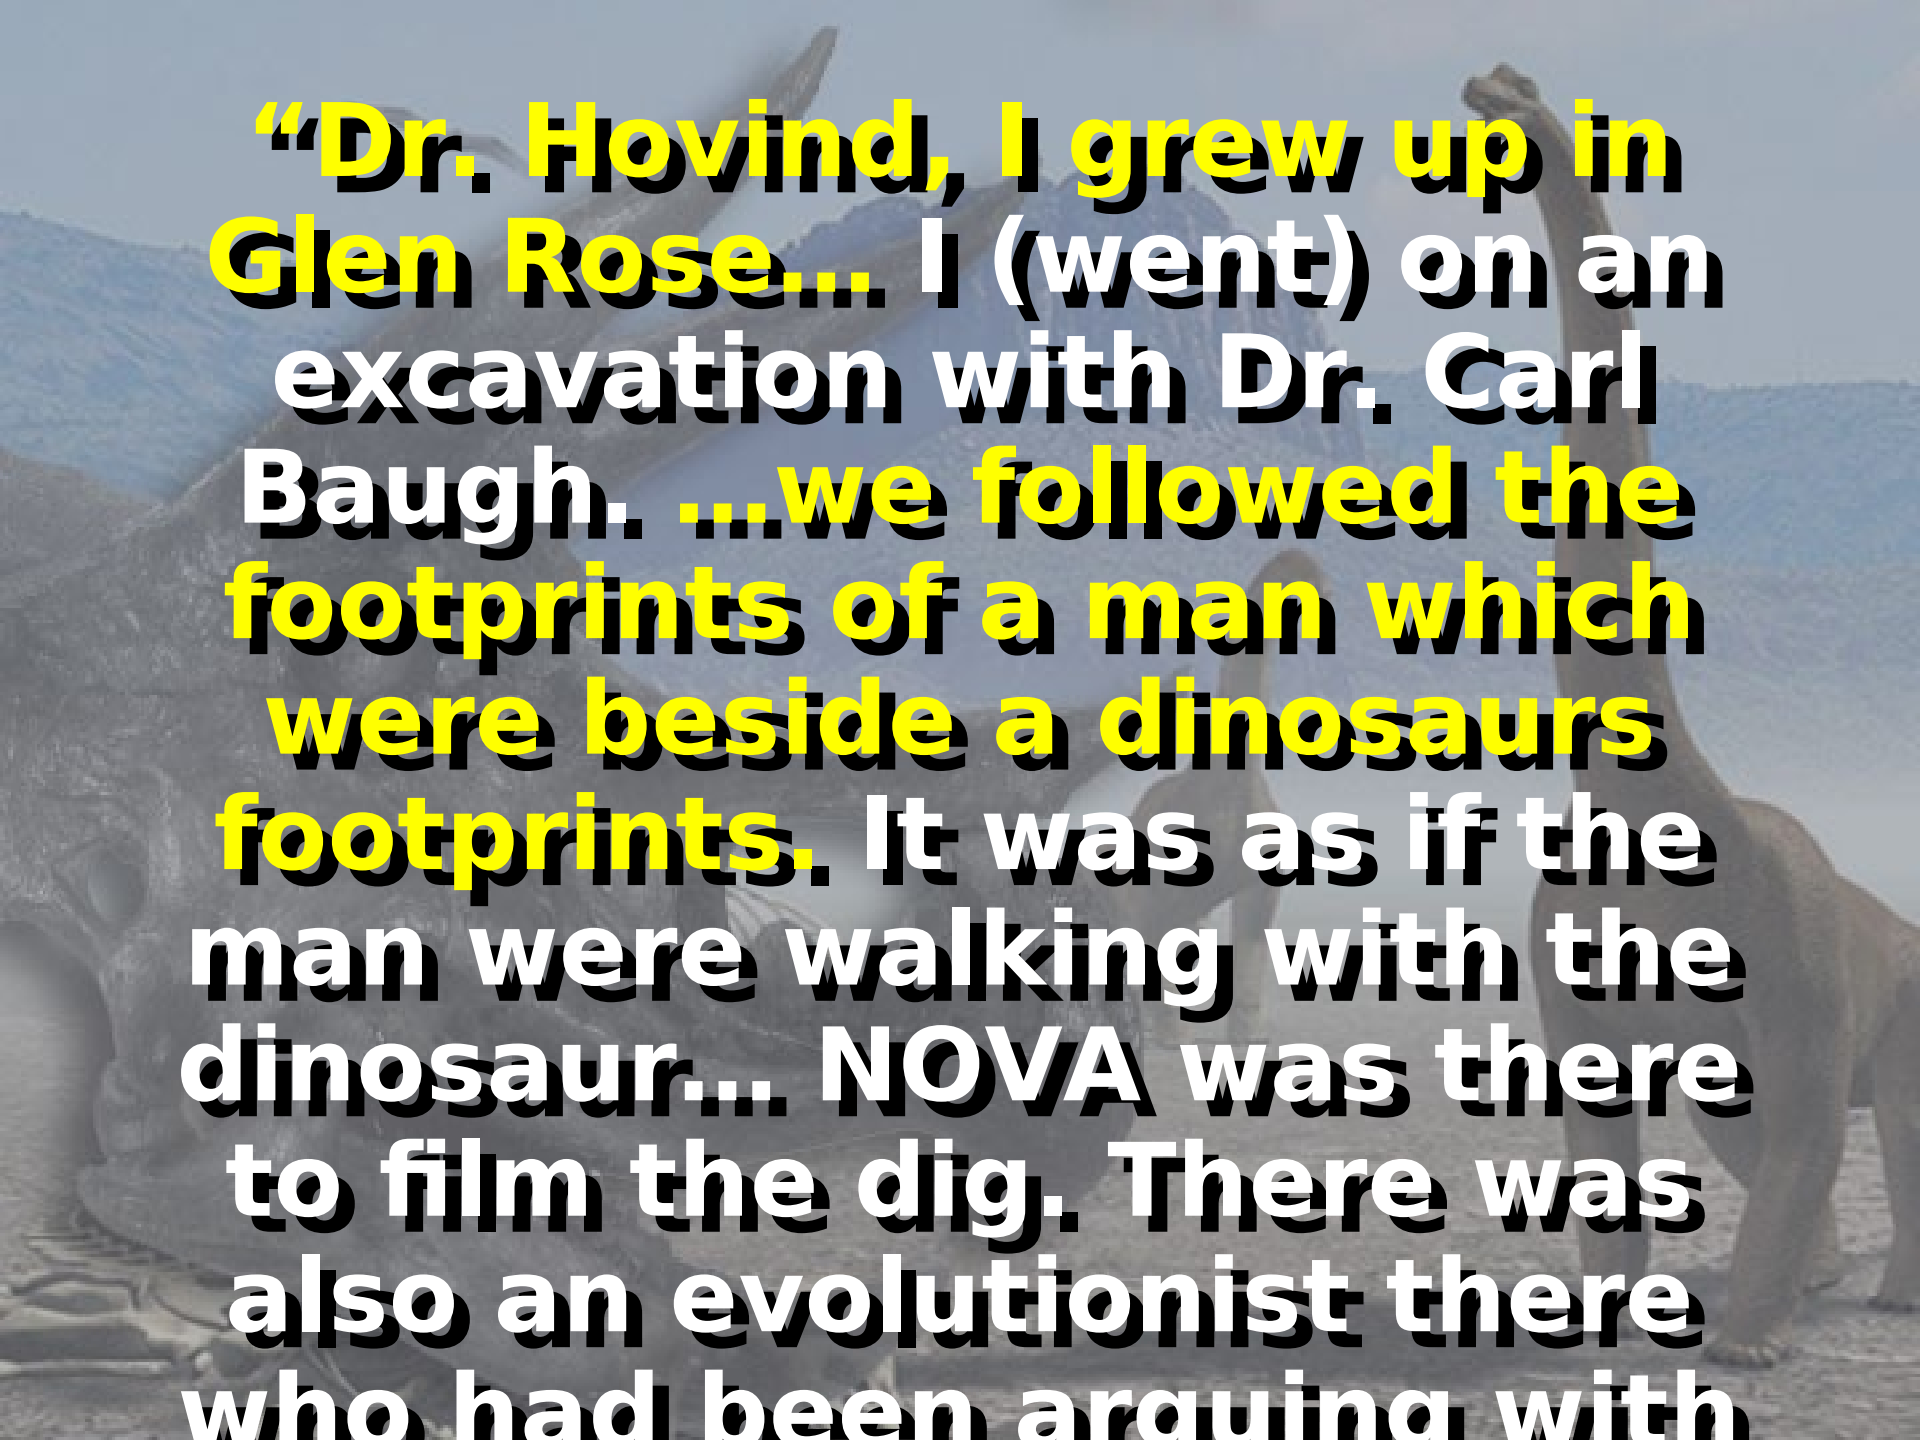

David Smith

“…dinosaur footprints, side by side with humans. Finding them would counter evidence that humans evolved long after the dinosaurs became extinct and back up…[the] claim that all species, including man, were created at one

“Creationists have stated that humans and dinosaurs were contemporaries in time… Were this momentous statements true the names of its discoverers would thunder down the corridors of time as individuals who made one of the most outstanding discoveries of the twentieth century.”

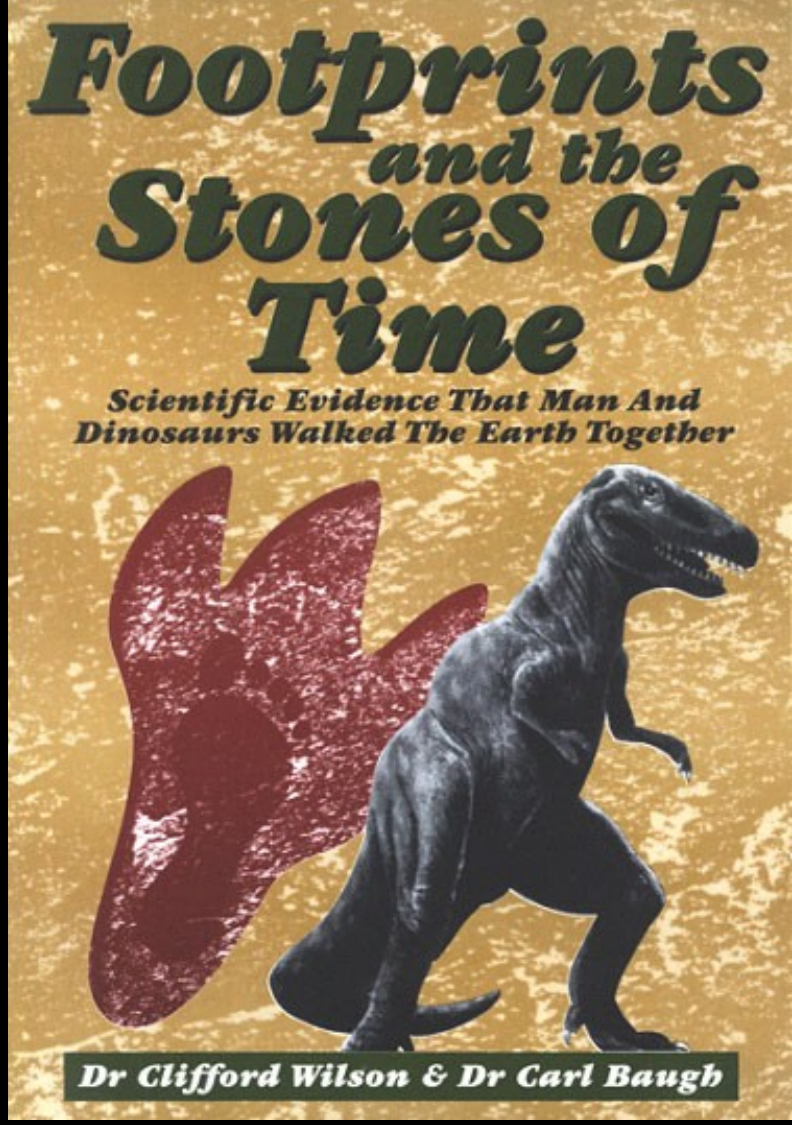

Ernst Mayr, Harvard Gish-Mayr Debate, Evansville, Indiana.

Unless there was a media blackout on

More about humans and dinosaurs together on video #3 and our college class CSE 102.

Some say the footprints are not legitimate.

1. The **Bible** says all life formed in 6 days.
2. **Human and chicken** footprints have never been found in the same strata.
3. Scores of **people have seen them** and think they are legit.

Max Han was fishing with his family near London, Texas in 1934 when he found a rock with wood protruding from it. When the rock was cracked open, this octagonally shaped iron hammer was exposed. The wood handle is partially coalifed with quartz and calcite

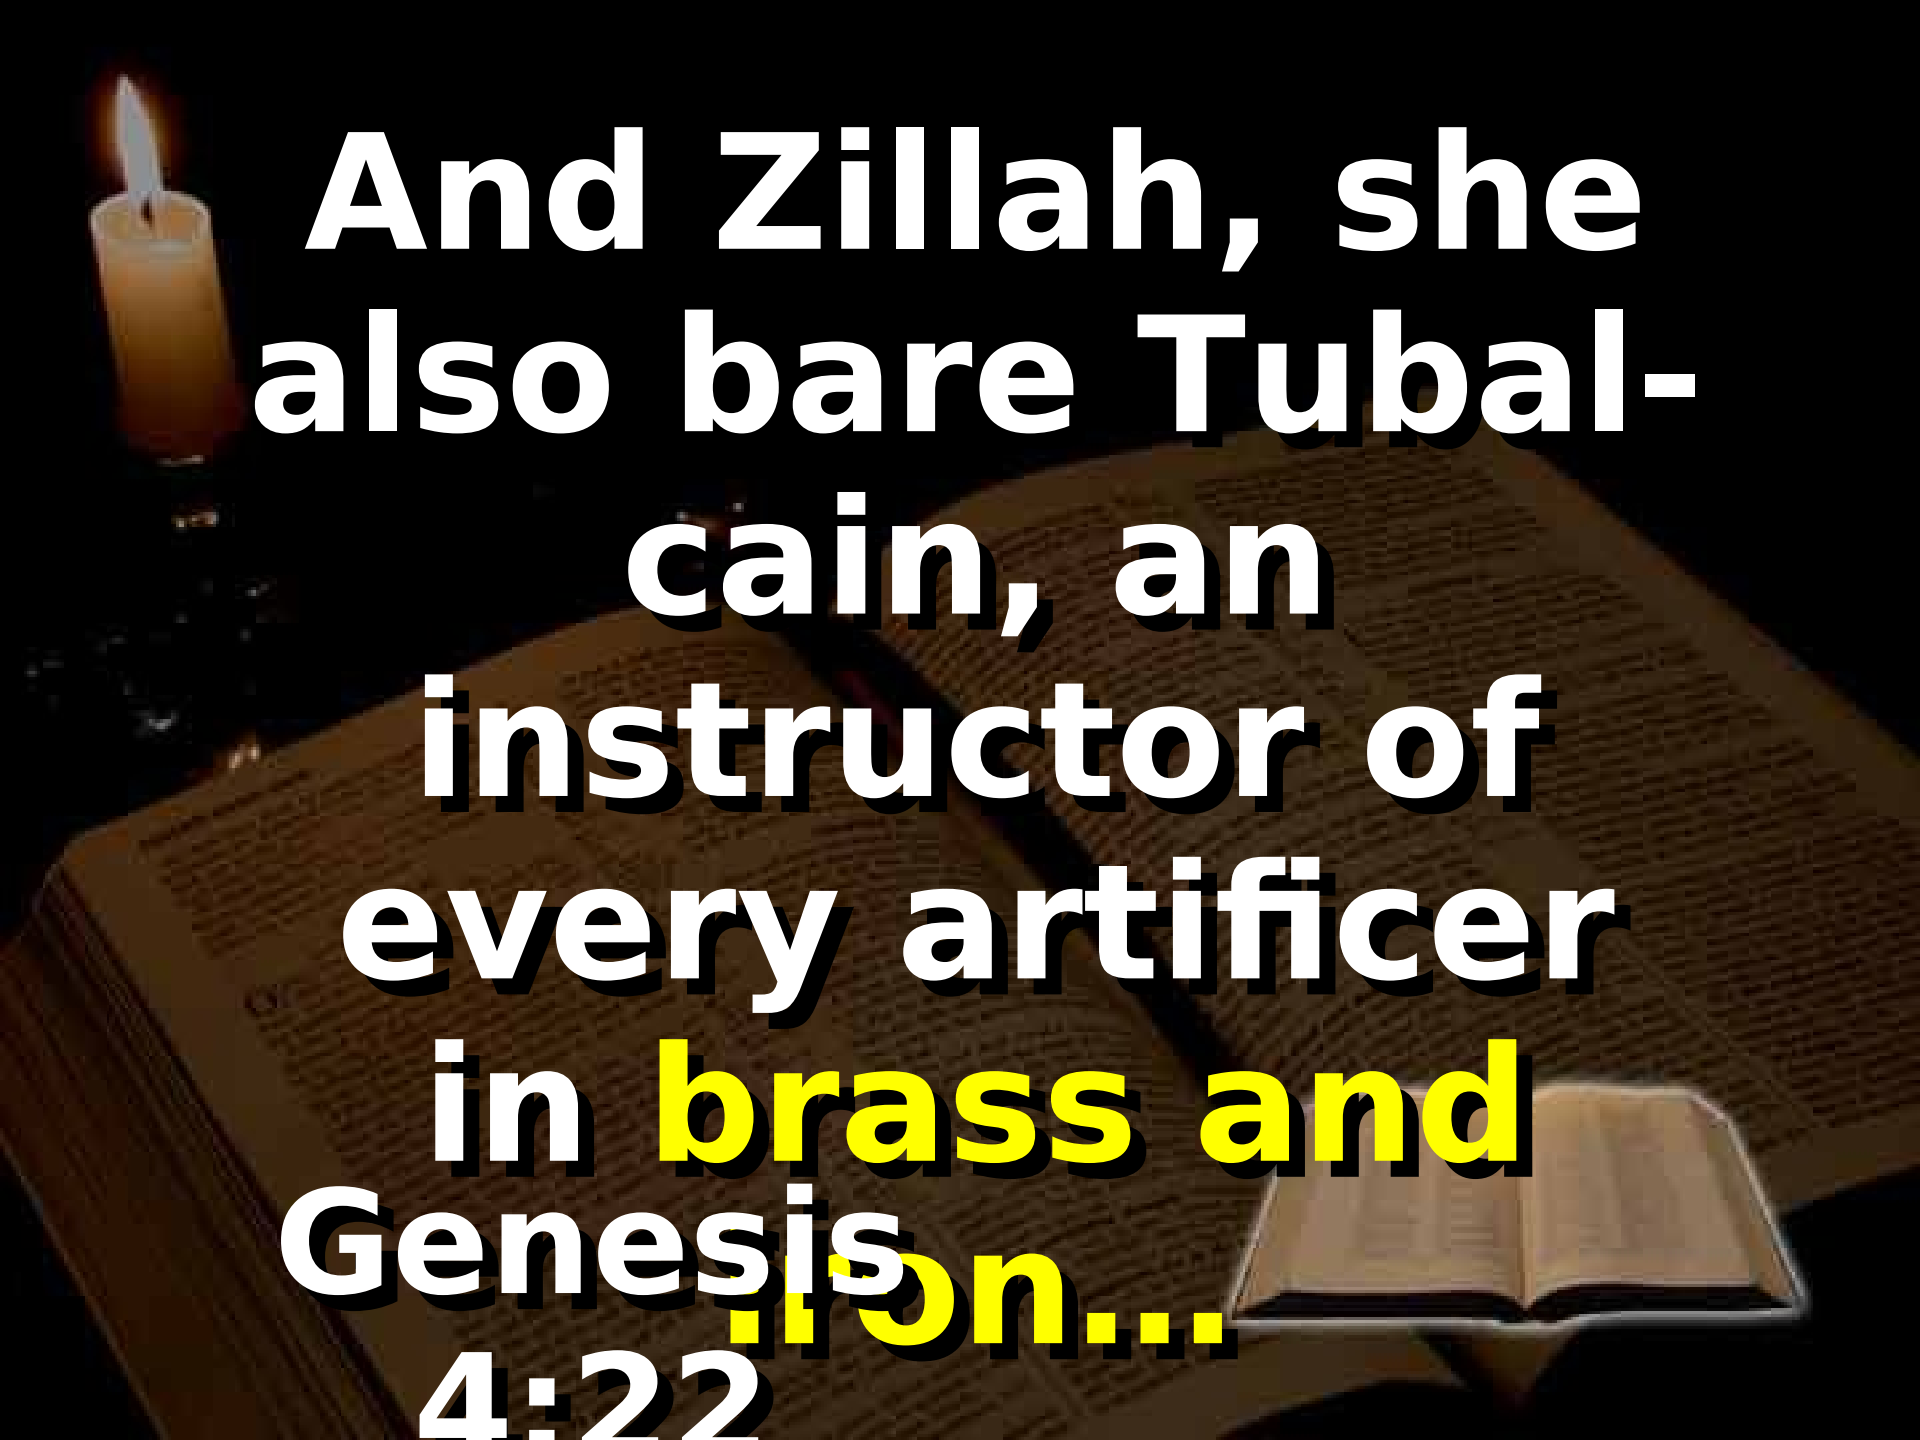

Density tests indicate casting of exceptional quality. A unique coating of FeO, which does not readily form under present atmospheric conditions,

Sea shells surrounding the hammer had been dated at 400 million years old. Part of the handle had turned to coal.
Batelle Lab. Said it is 96.6% iron, 2.6% chlorine, .74% sulfur.
Dr. Carl Baugh has it in his museum. 254-897-3200

Replicas of the hammer are available from CSE. Only $25, 850-479-3466

And Zillah, she also bare Tubal-cain, an instructor of every artificer in brass and iron...
Genesis 4:22

Mr. Newton Anderson found this bell inside a lump of coal in 1944. He still has the bell.

Fluoride, Teeth & THE ATOMIC BOMB:

Manhattan Project — July 16, 1945

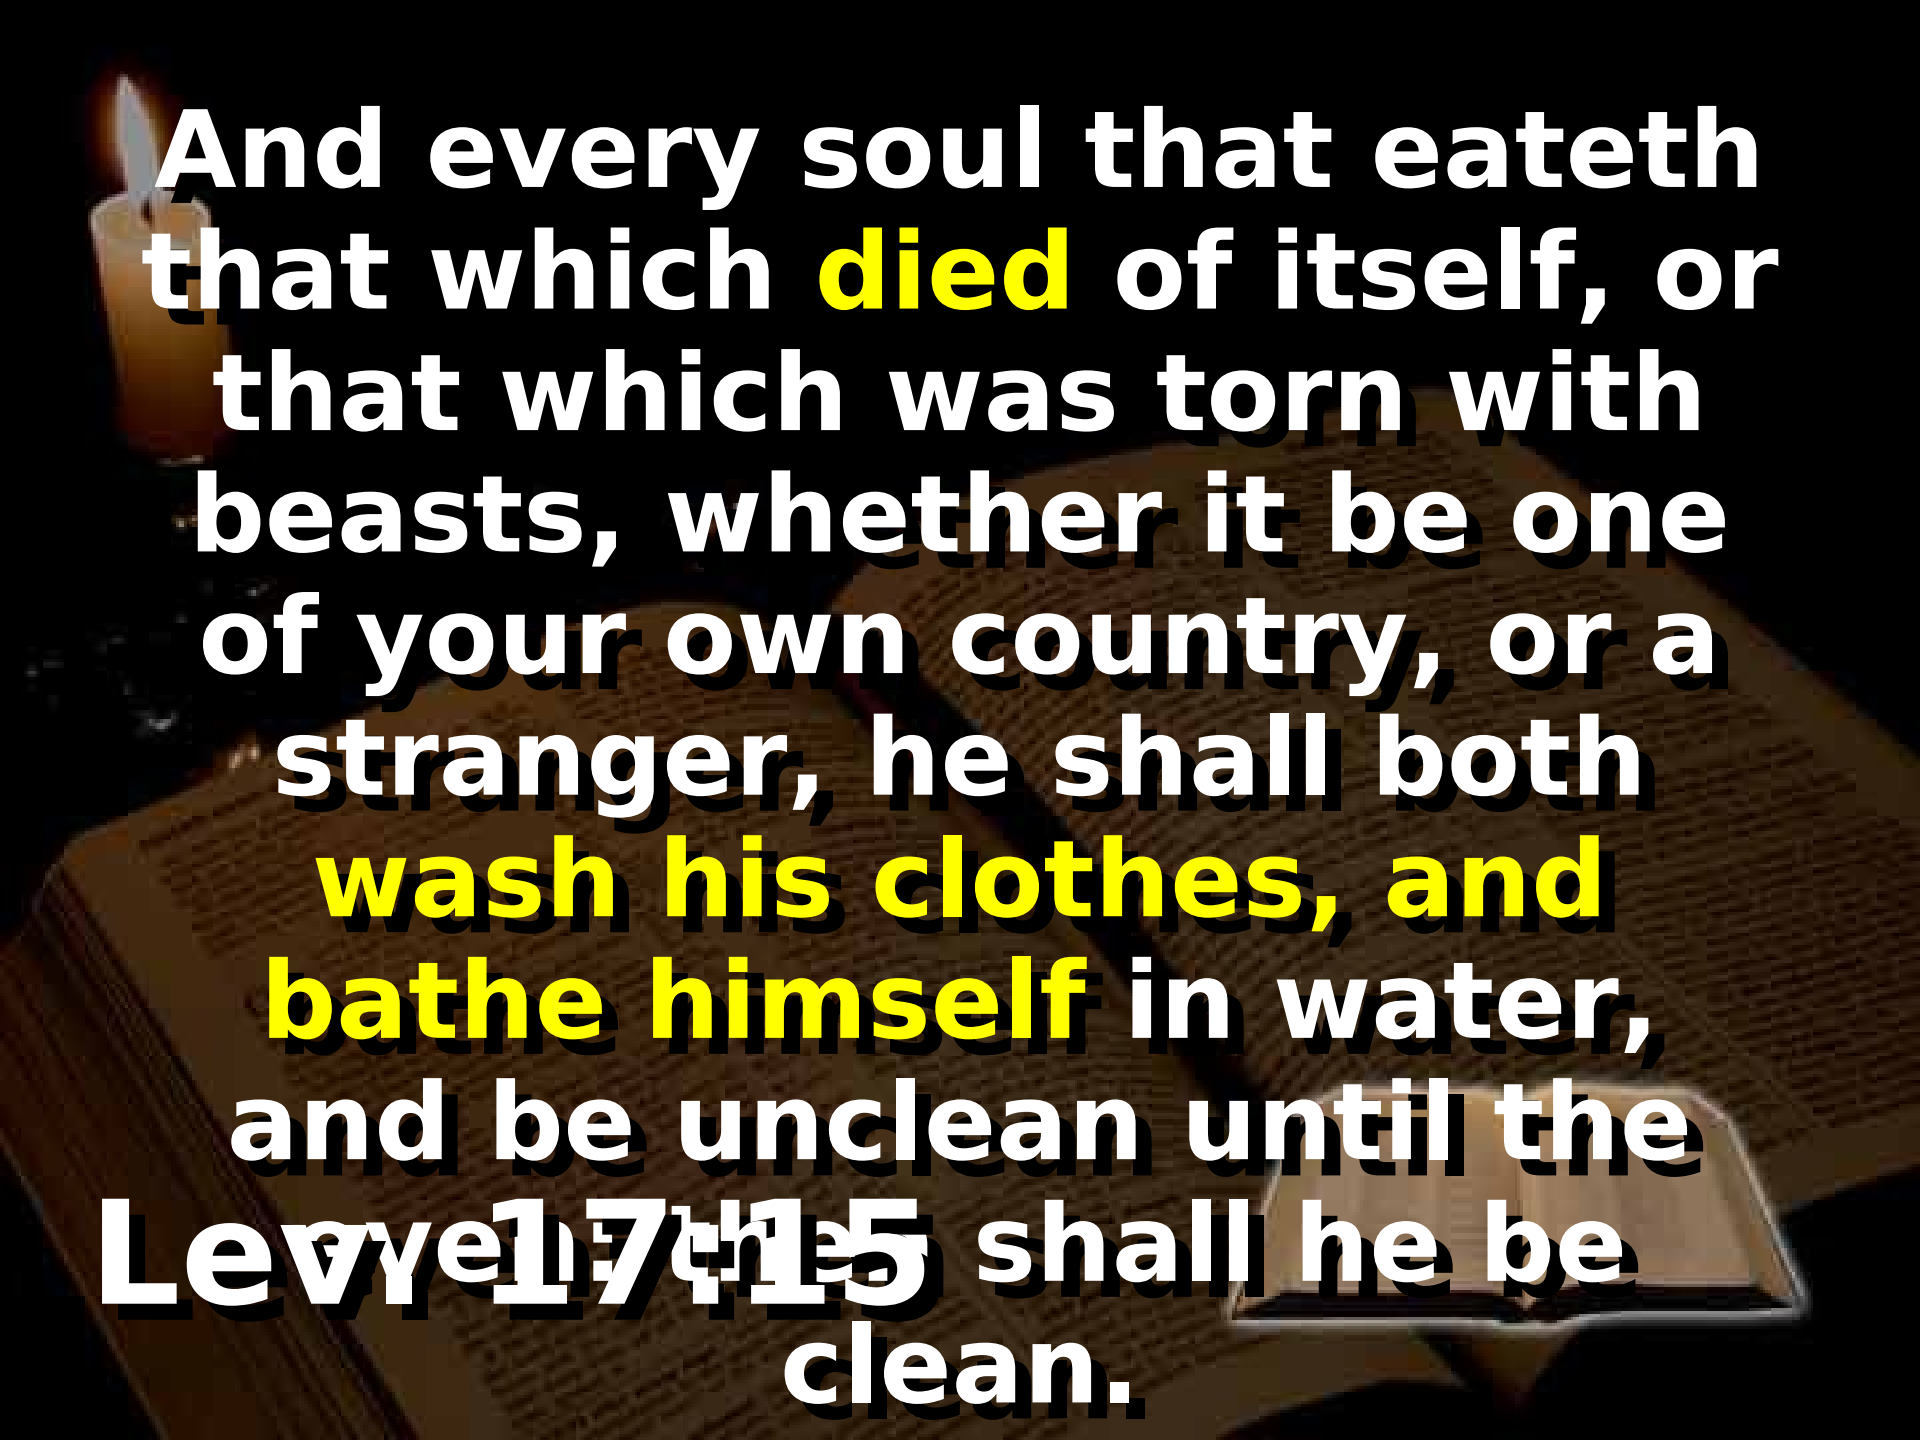

A Case Against FLUORIDE!

The Encyclopedia Britannica documents that in 1845, a young doctor in Vienna named Dr. Ignaz Semmelweis was horrified at the terrible death-rate of women who were dying after giving birth in hospitals.

The Doctor noted that doctors would examine the bodies of these who had died, then, without washing their hands, go straight to the next wards and examine expectant mothers. This was their normal practice, because the presence of microscopic diseases was unknown. Doctor Semmelweis insisted that doctors wash their hands before examinations, and the death

To honor this doctor for his great find:

He was fired from 3 hospitals in a row then committed to a mental institution where a "patient" murdered him.

And every soul that eateth that which died of itself, or that which was torn with beasts, whether it be one of your own country, or a stranger, he shall both wash his clothes, and bathe himself in water, and be unclean until the even: then shall he be clean.
Lev 17:15

2 Basic Philosophies of Law & Government

Creation:

Evolution:

- Laws come from man's opinion
- Rights are granted by government
- Government should be all-powerful provider

DEMOCRACY

70-80% **of health care costs in America are from self induced illnesses and accidents like smoking, drinking,**

If we are going to have universal health care in America why not universal auto care? House care? Clothing care?

2 Basic Philosophies of Law & Government

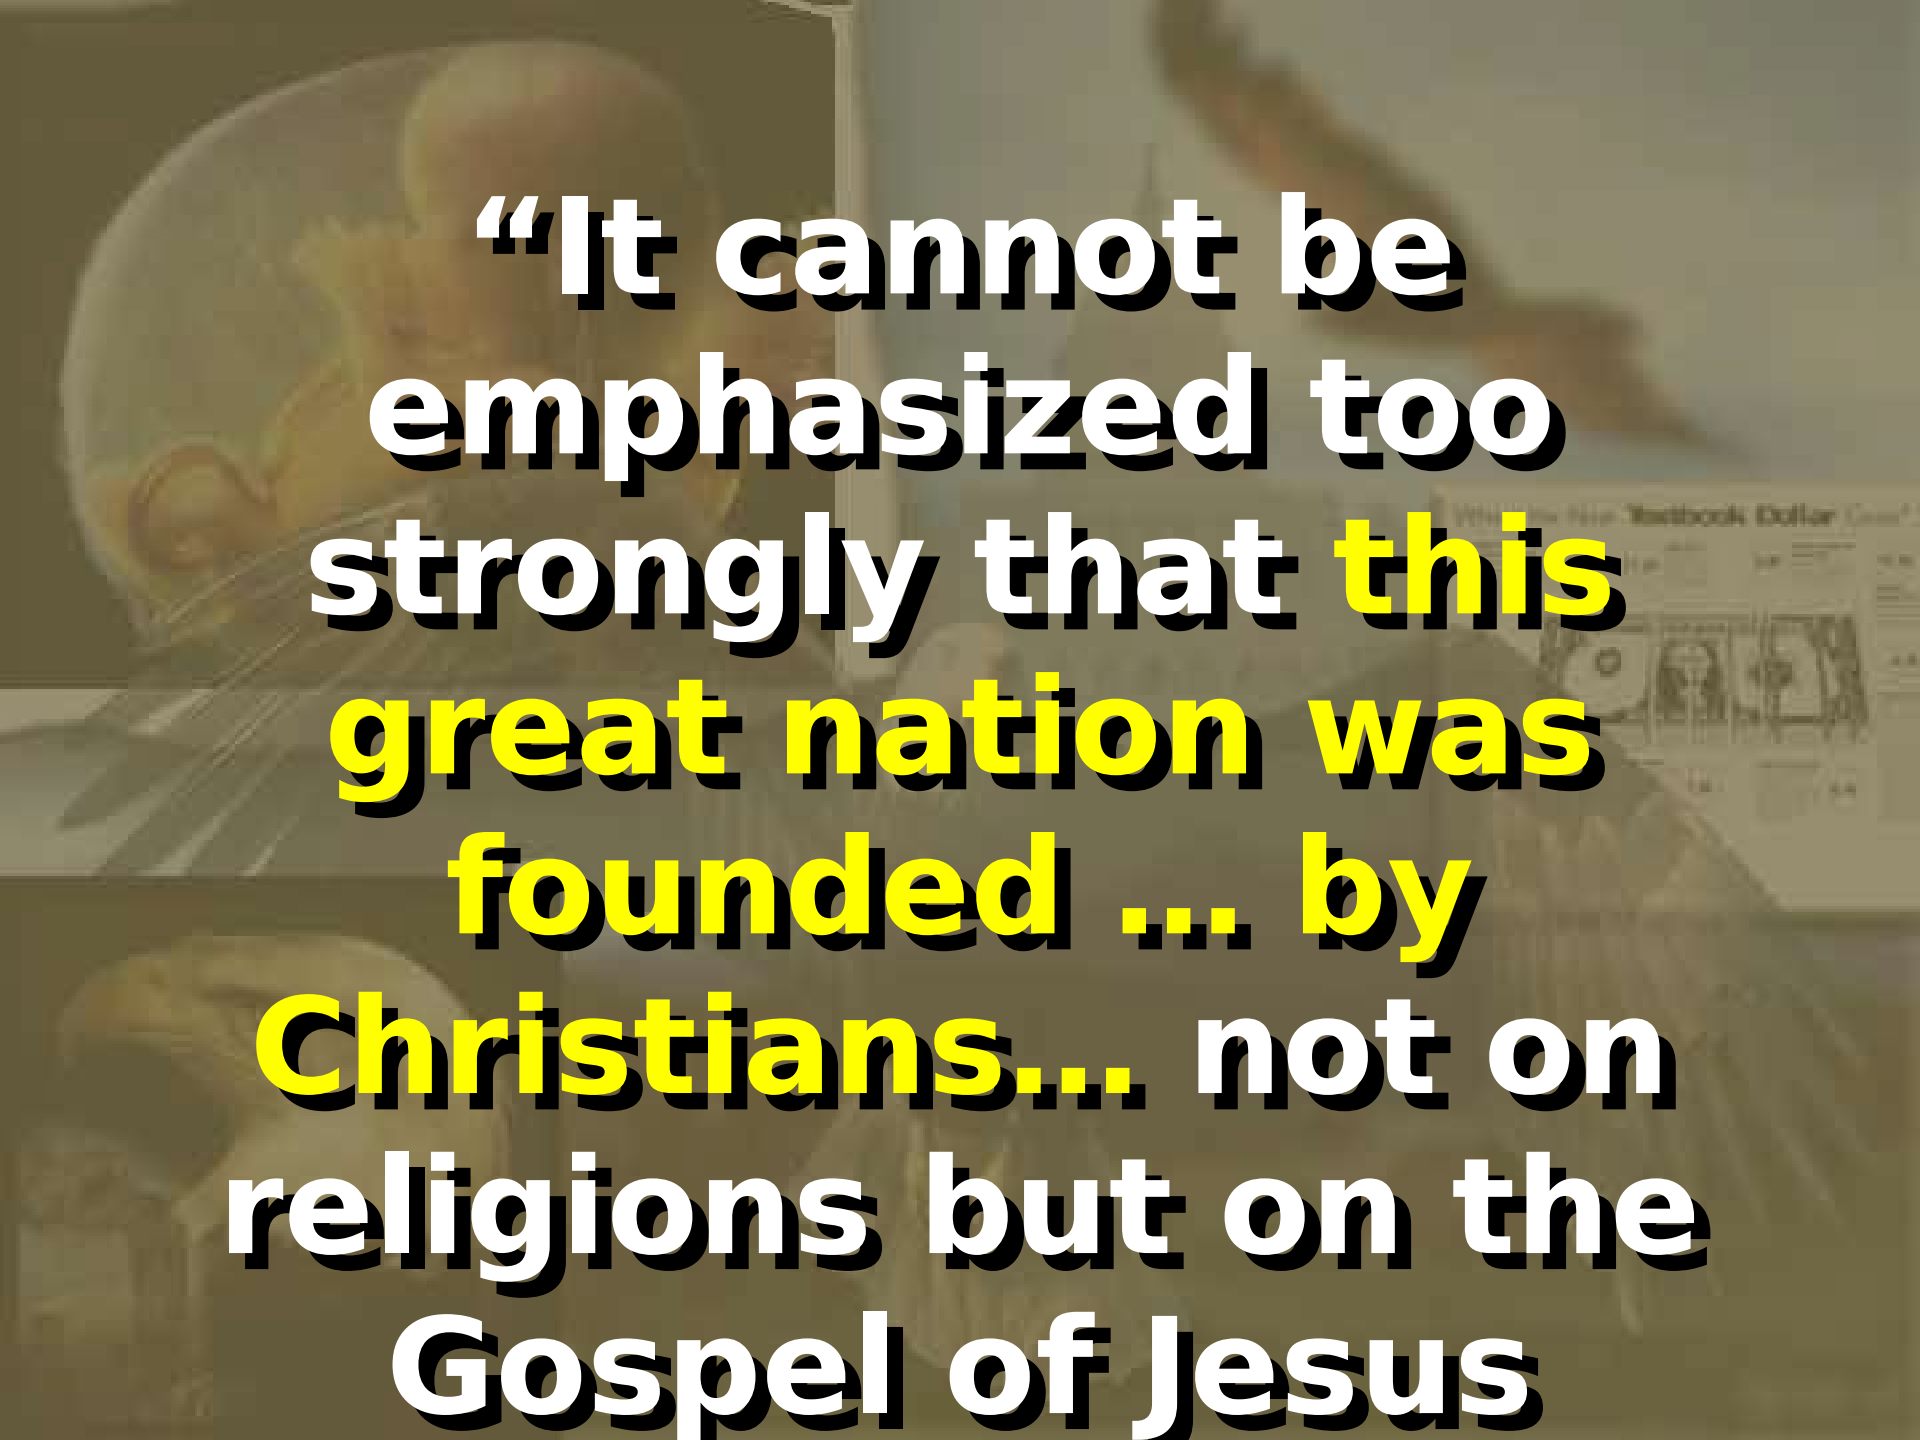

Creation:

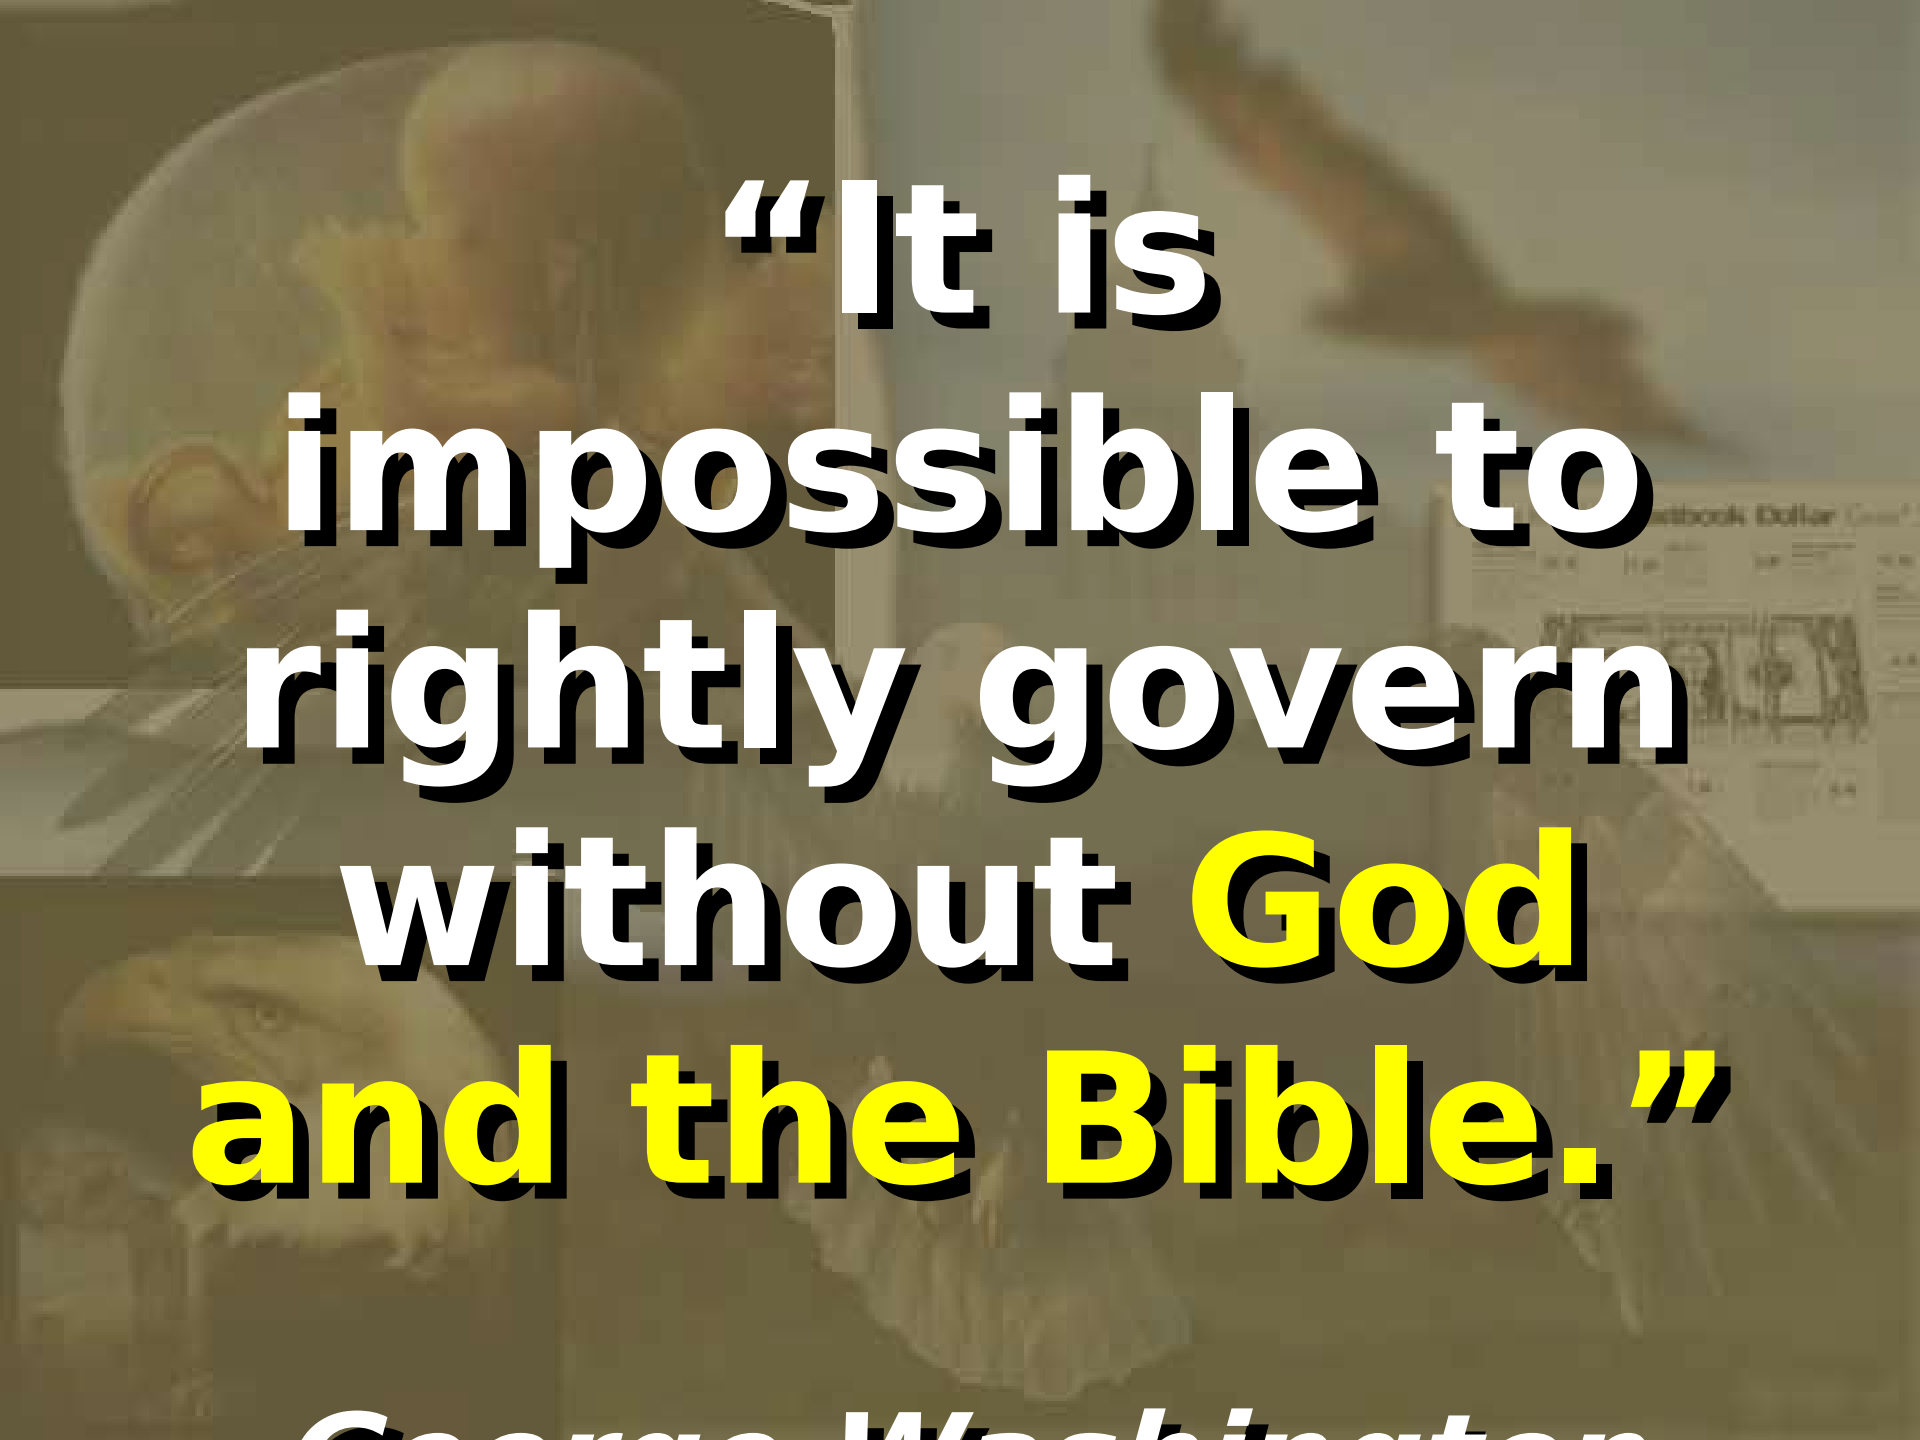

- **Laws come from the Creator**
- **Rights are "unalienable"**
- **Government should be limited to the punishment of evildoers and defense**

Evolution:

- **Laws come from man's opinion**
- **Rights are granted by government**
- **Government should be all-powerful provider**

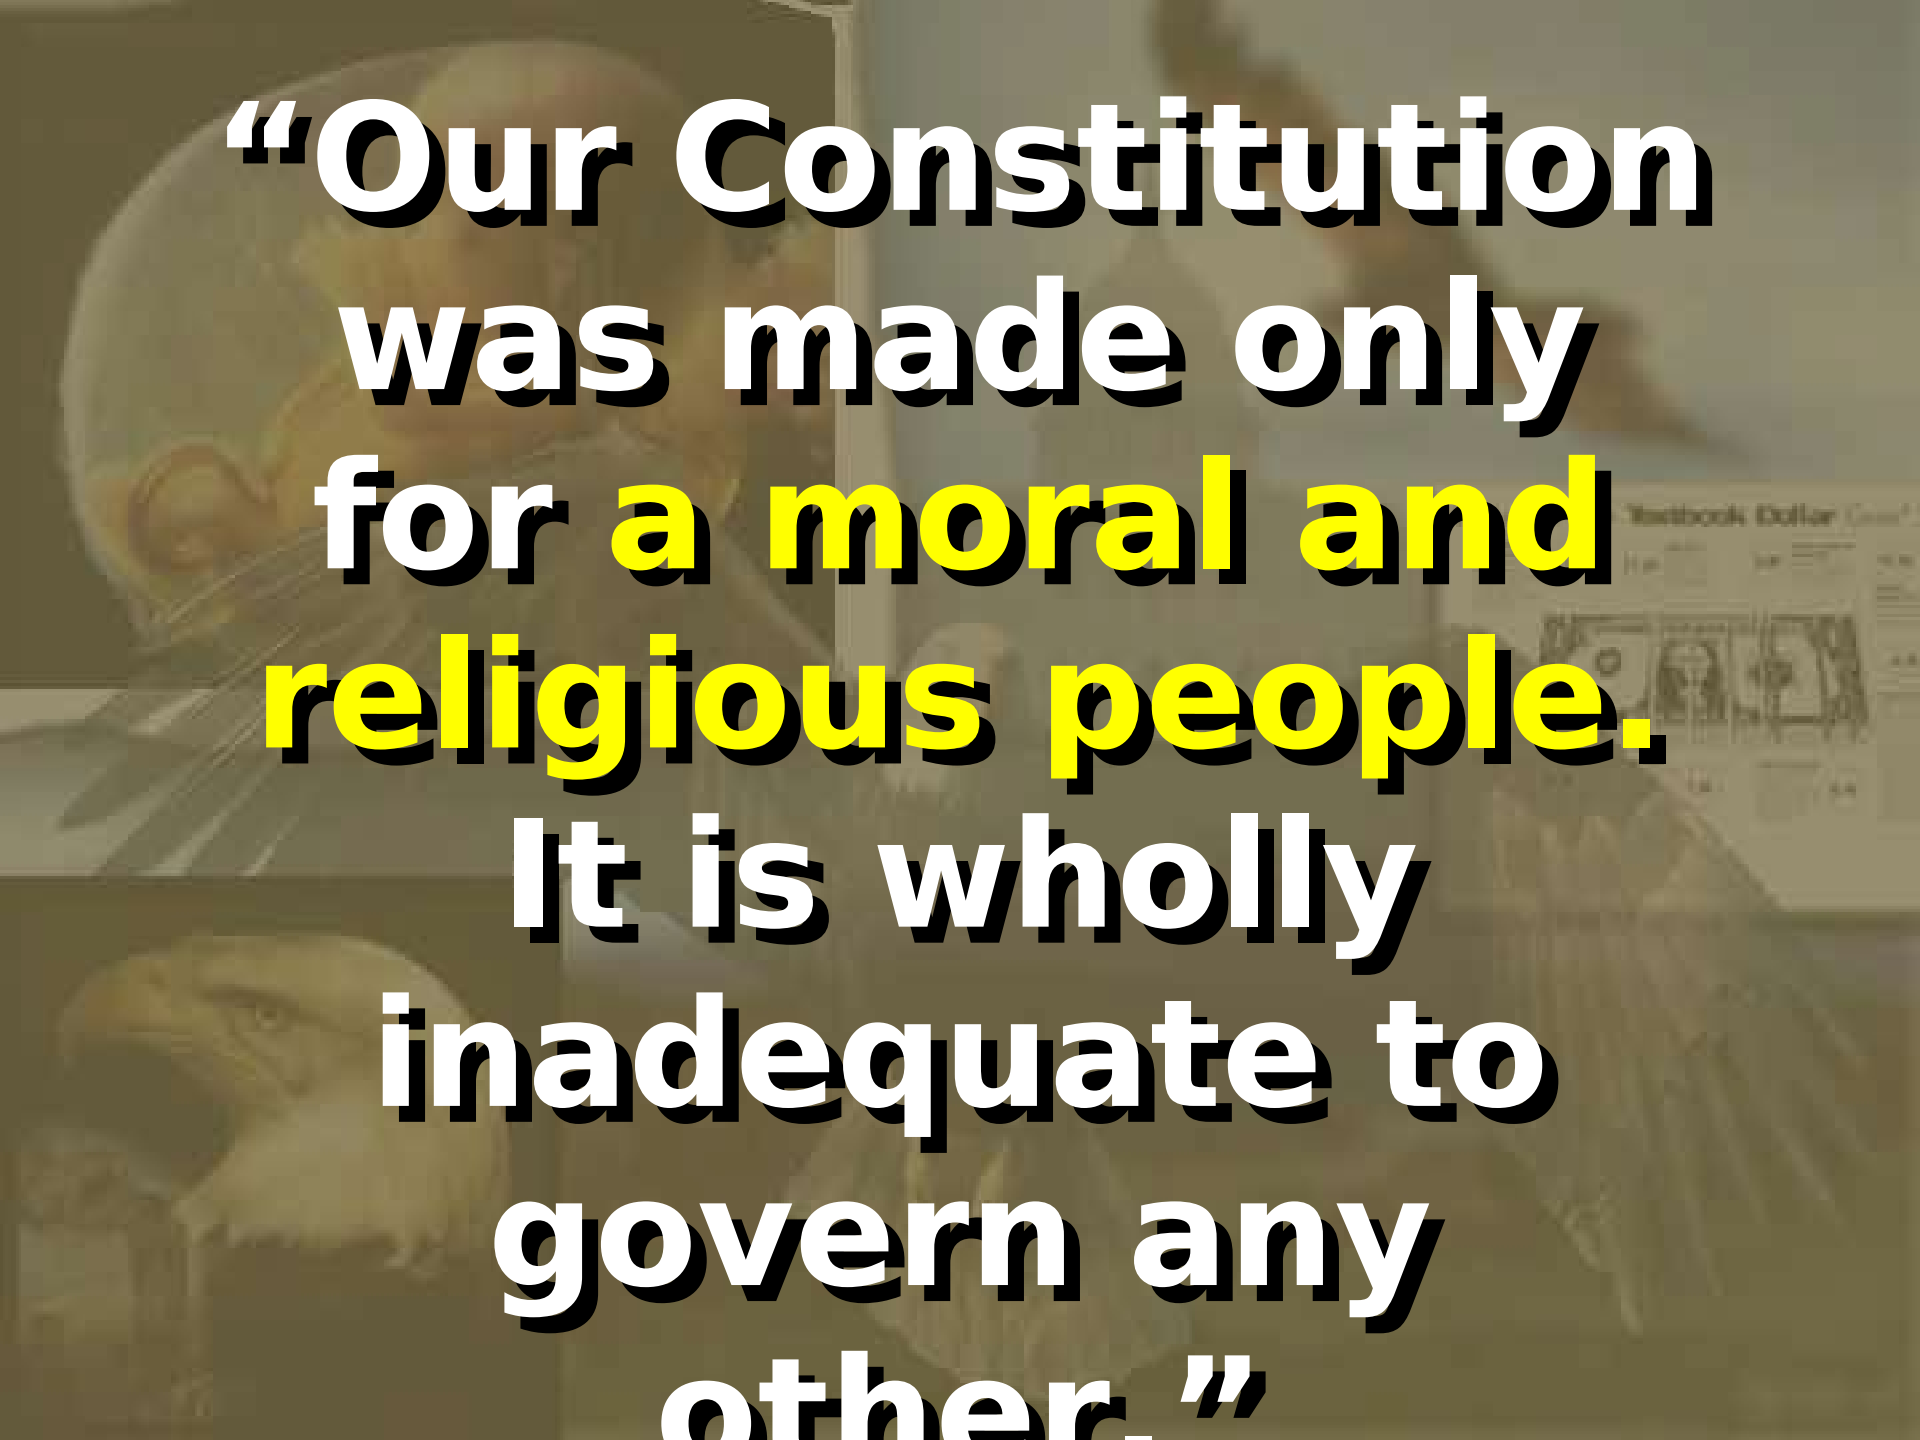

DEMOCRACY

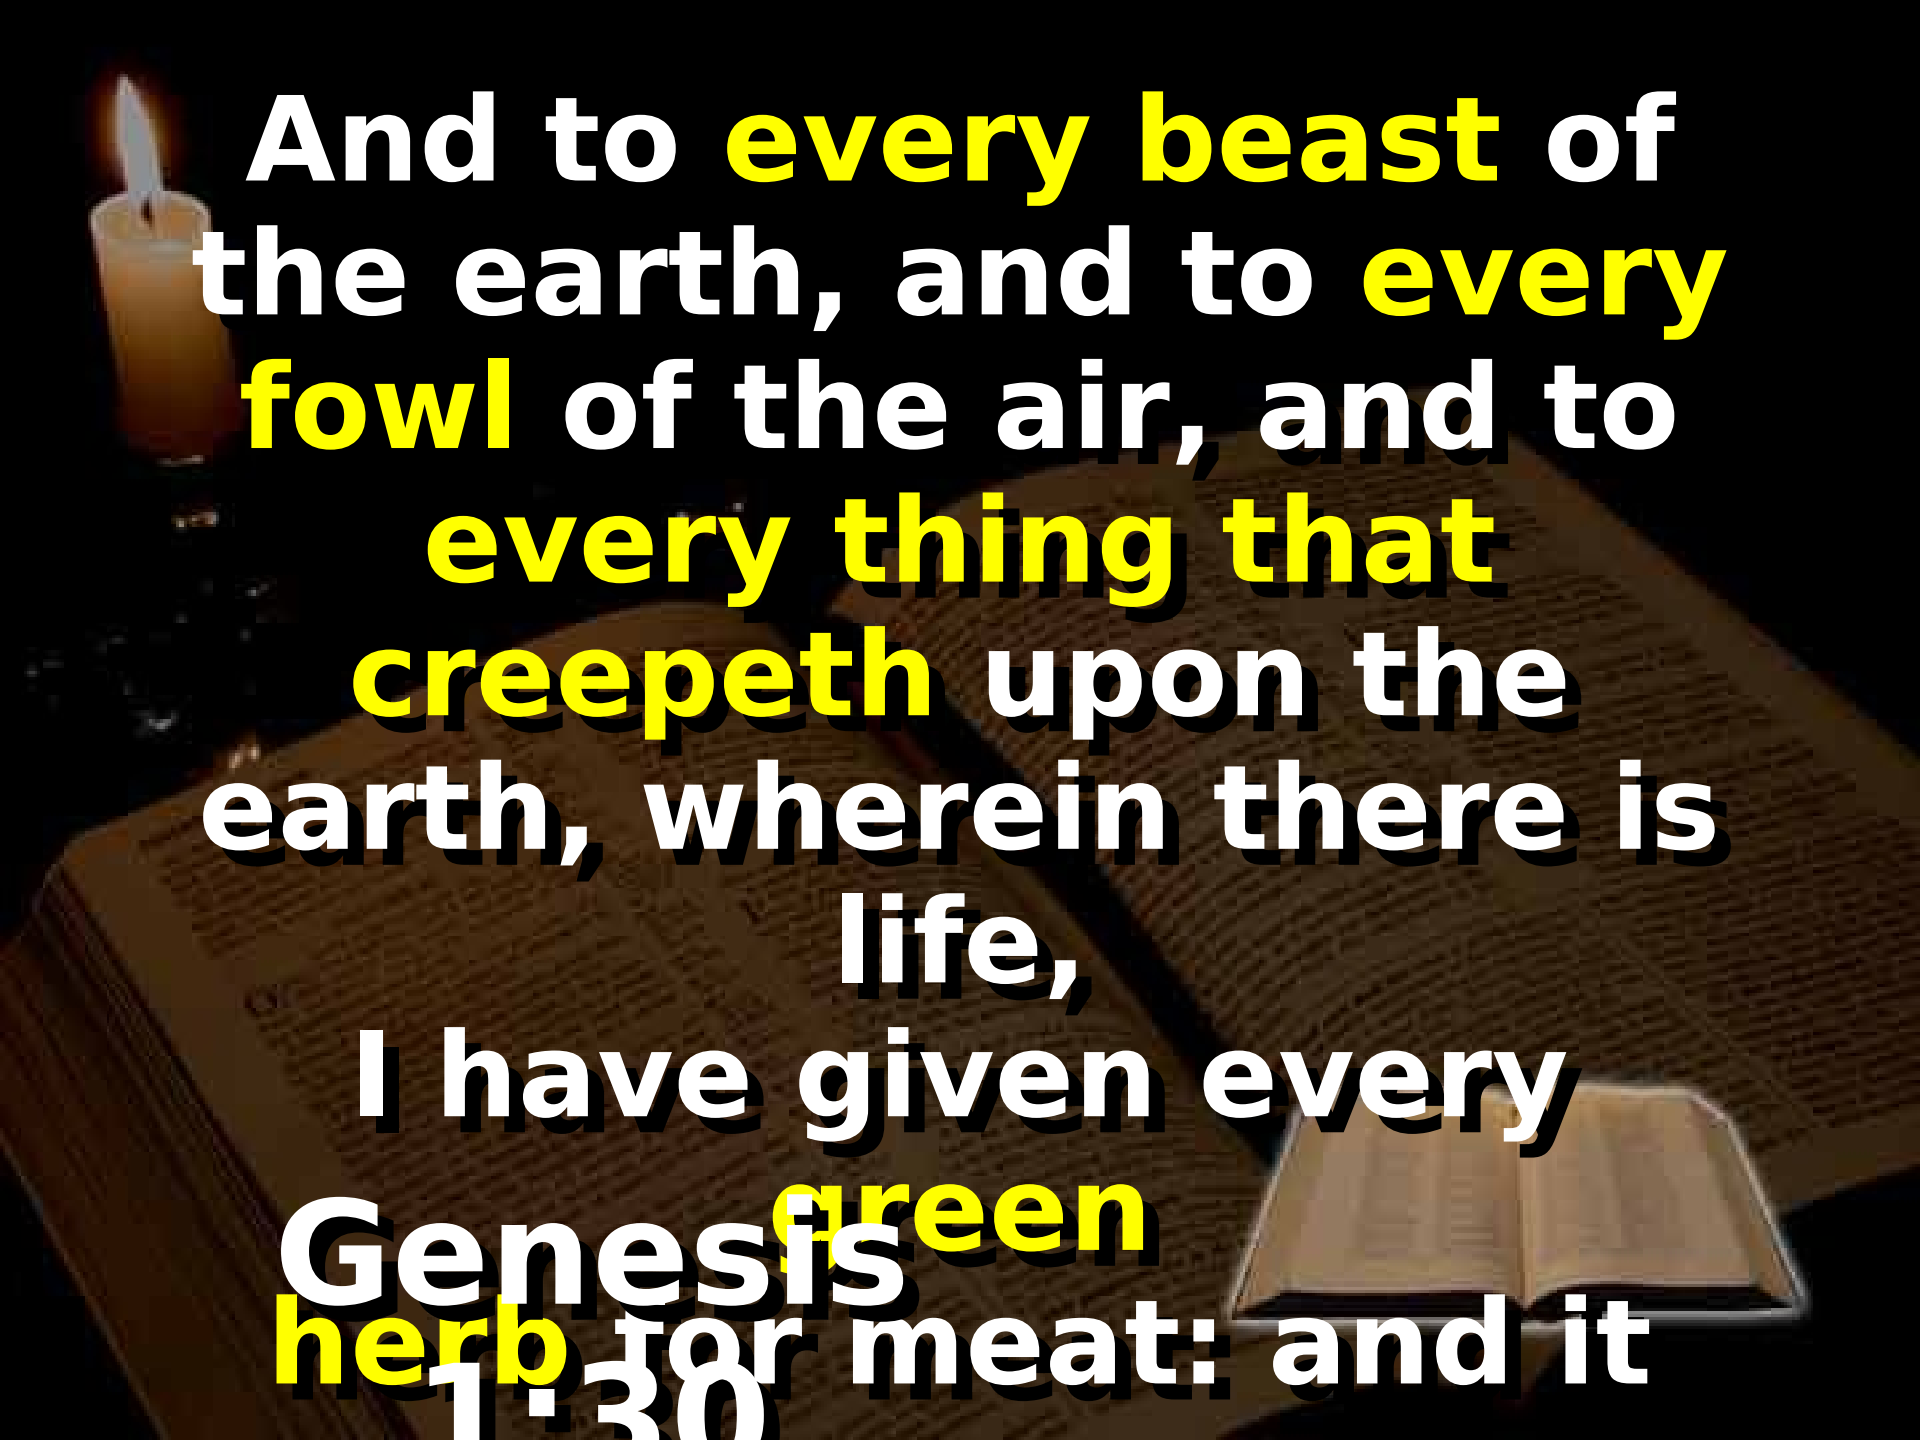

“It cannot be emphasized too strongly that this great nation was founded … by Christians… not on religions but on the Gospel of Jesus

“It is impossible to rightly govern without God and the Bible.”

George Washington

"Our Constitution was made only for a moral and religious people. It is wholly inadequate to govern any other."

And to every beast of the earth, and to every fowl of the air, and to every thing that creepeth upon the earth, wherein there is life,
I have given every green herb for meat: and it

8-3-05 Kent Hovind

And God blessed Noah and his sons, and said unto them, Be fruitful and multiply, and replenish the earth. And the fear of you and the dread of you shall be upon every beast of the earth...
Genesis 9:1-2

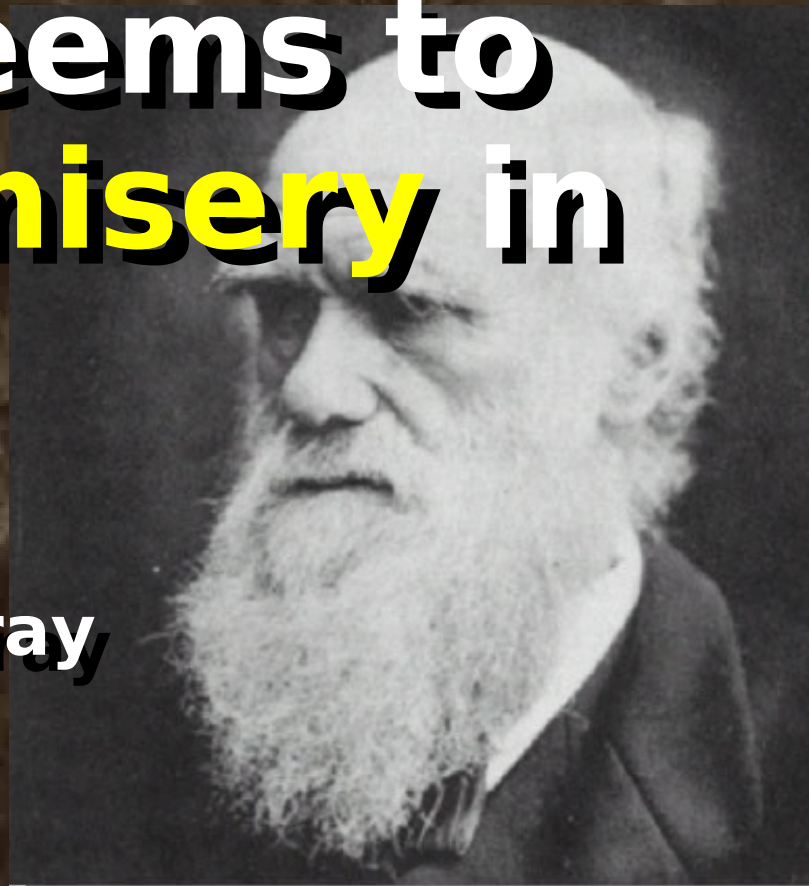

Every moving thing that liveth shall be meat for you; even as the green herb have I given you all things.
Genesis 9:3

God made a perfect world.
Man wrecked it!
© Dennis Lipp

For I reckon that the sufferings of this present time are not worthy to be compared with the glory which
Shall be revealed in us.
...For we know that the whole creation groaneth and travaileth in pain together until now.
Romans 8:18, 22

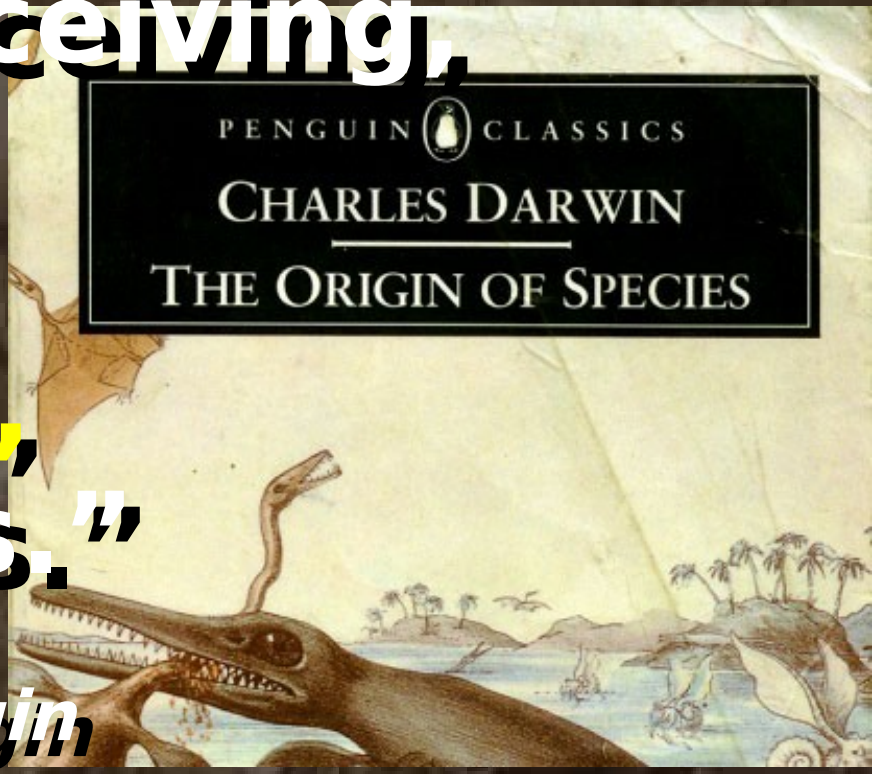

“I am bewildered. I had no intention to write atheistically. But…there seems to be so much misery in the world.”

-Charles Darwin, May 22, 1860, in a letter to Asa Gray

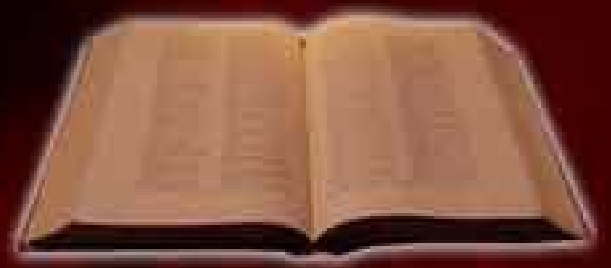

“thus from the war of nature, from famine and death, the most exalted object which we are capable of conceiving, namely, the production of higher animals, directly follows.”

Charles Darwin *The Origin of Species*... p. 243

Wherefore as by one man sin entered into the world and death by sin...

Romans 5:12

For since by man came death, by man came also the resurrection of the dead. For as in Adam all die,

I Corinthians 15:21-22

DON'T BECAUGHT
DEAD
WITHOUT JESUS

The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them.

Isaiah 11:6

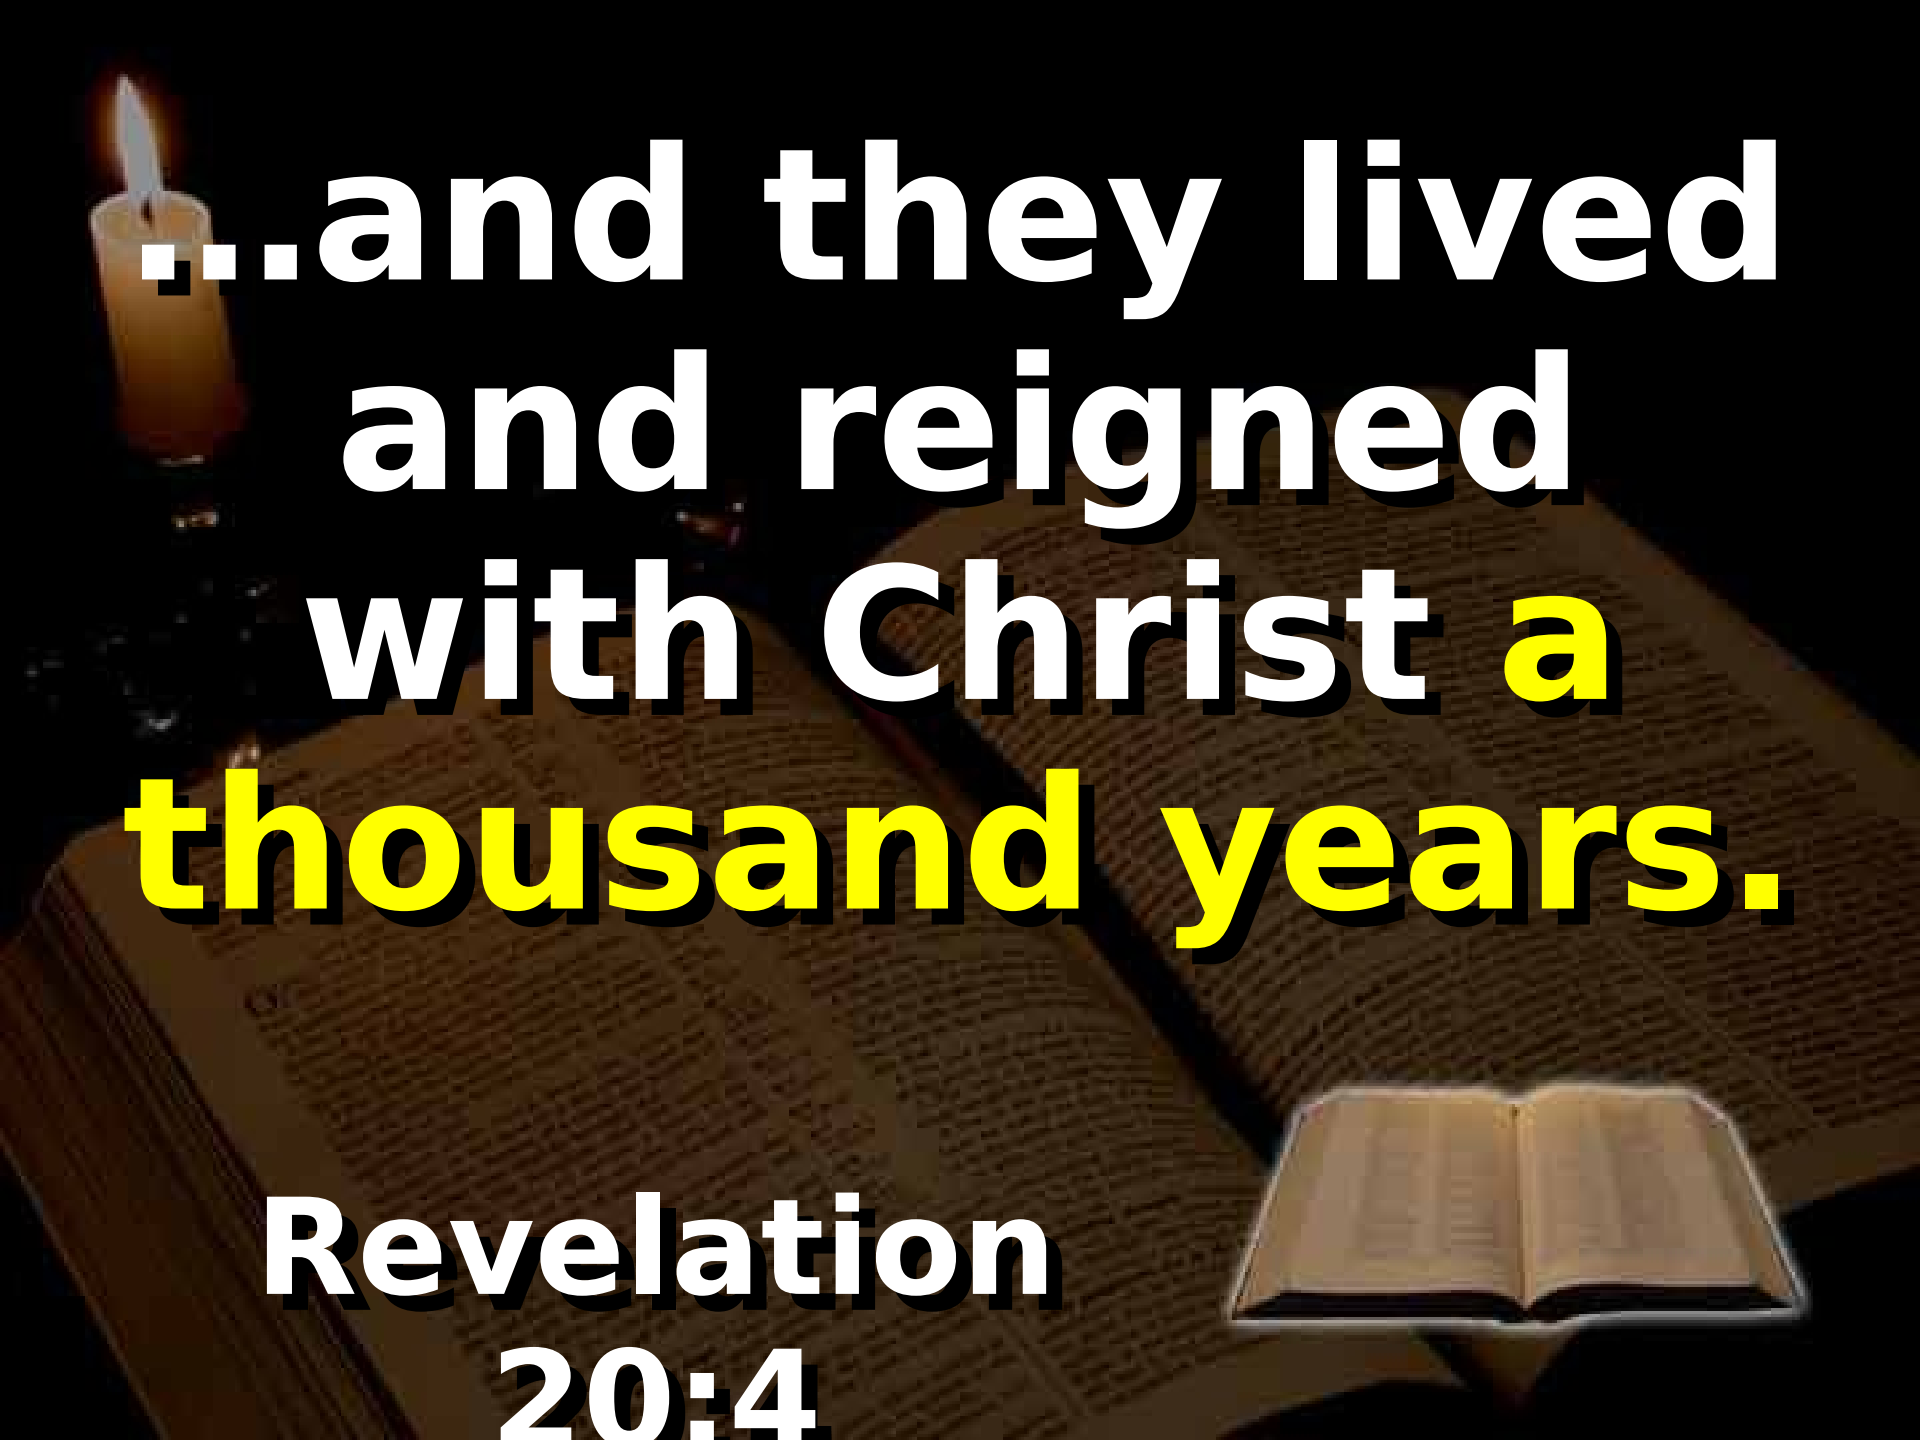

And the cow and the bear shall feed; their young ones shall lie down together: and the lion shall [illegible] the ox.

Isaiah 11:7

For the
child shall die
an hundred
years old;
Isaiah
65:20

...and they lived
and reigned
with Christ a
thousand years.
Revelation
20:4

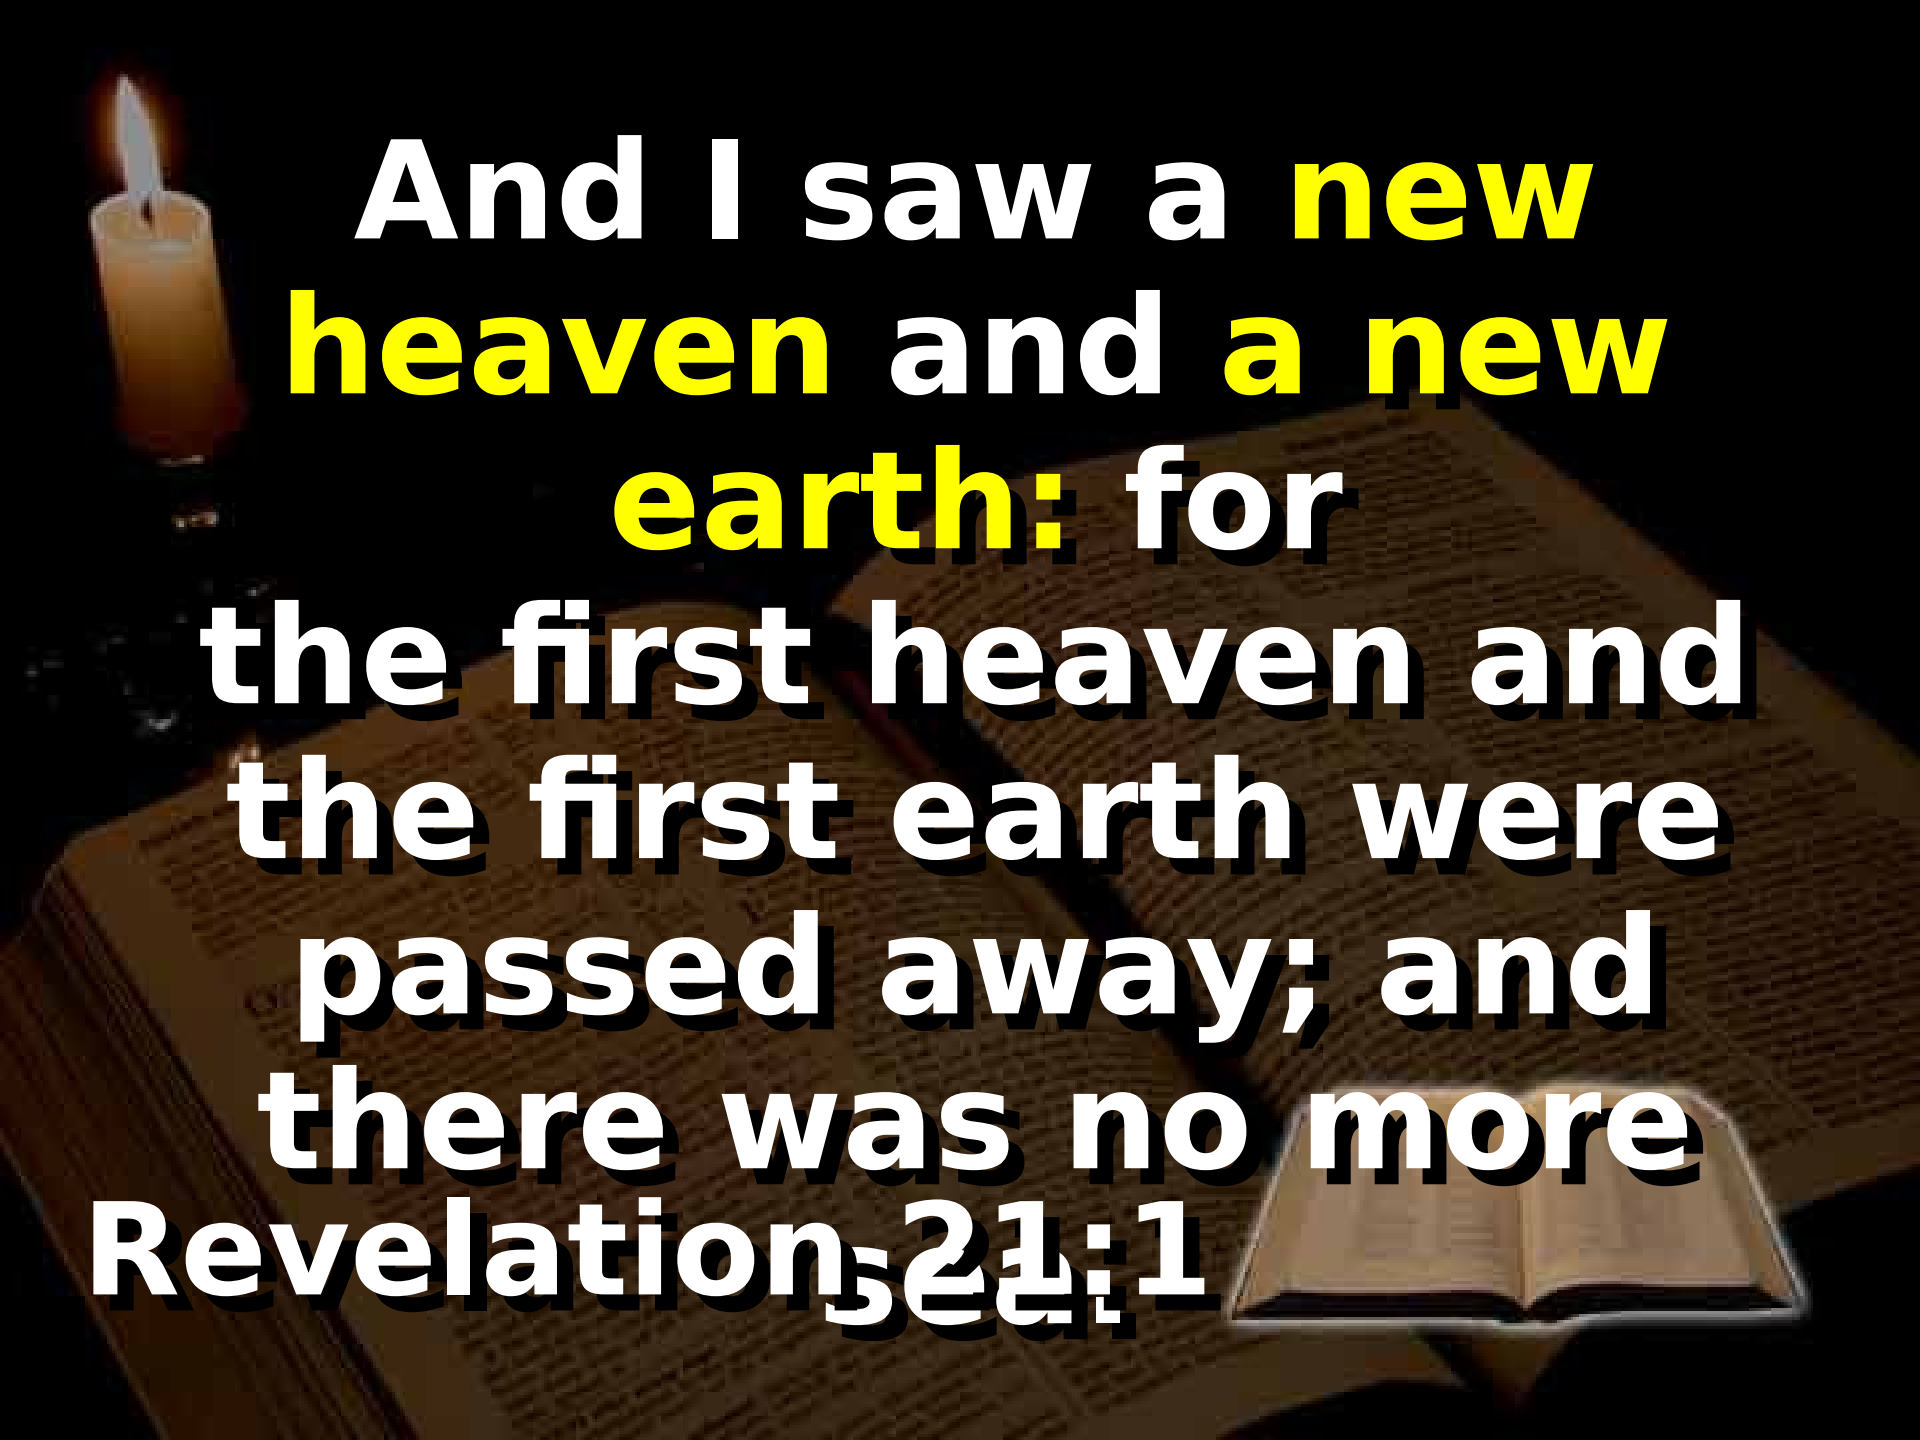

God has great plans for His kids, don’t

For, behold, I create new heavens and a new earth: and the former shall not be remembered, nor come into mind.

Isaiah 65:17

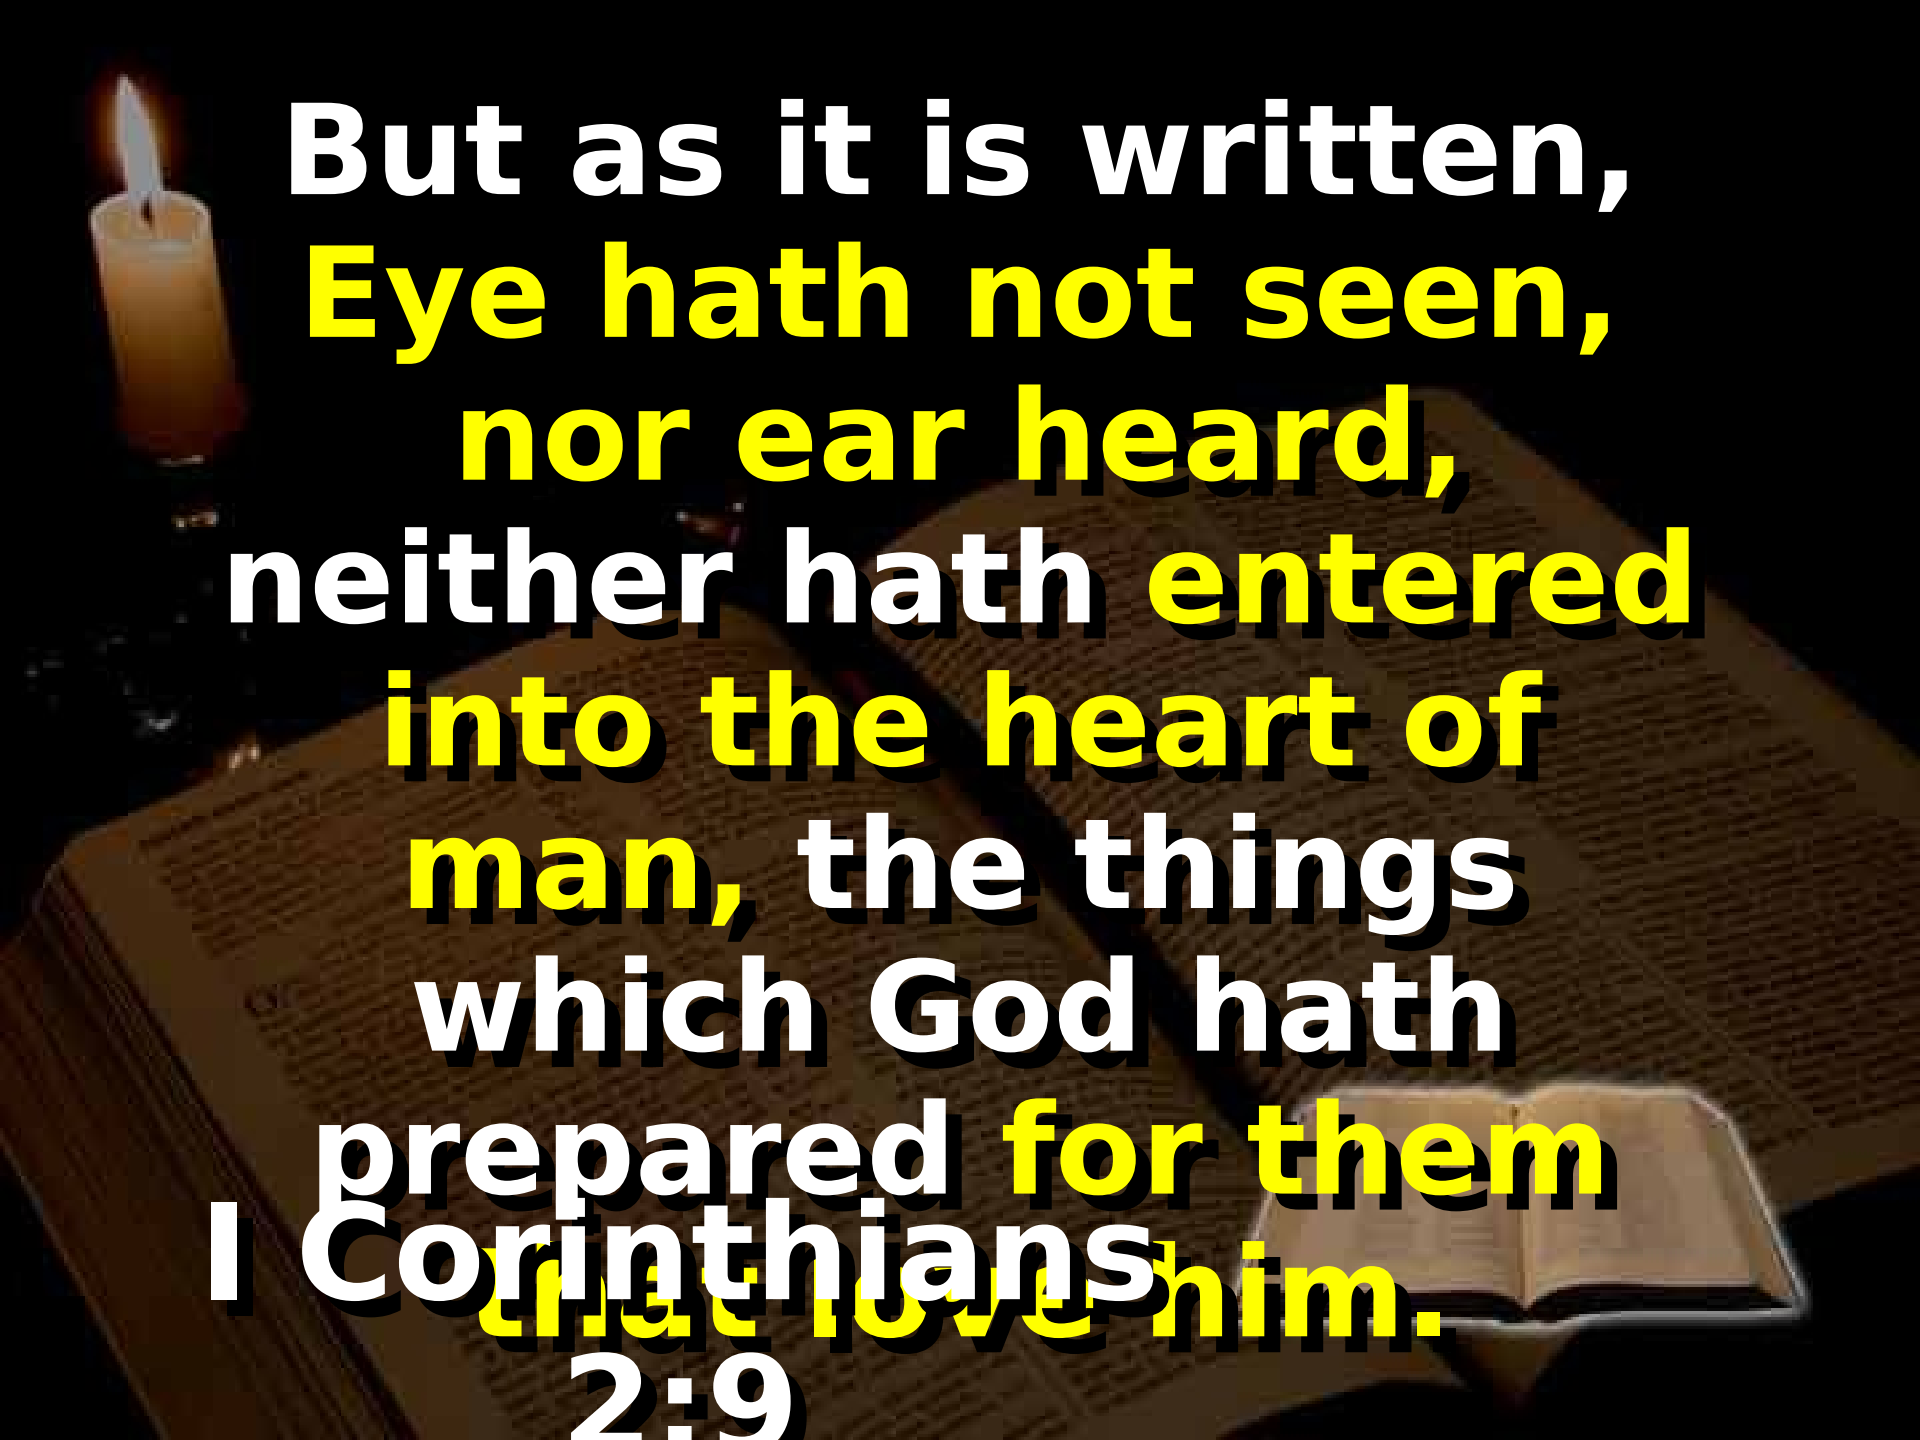

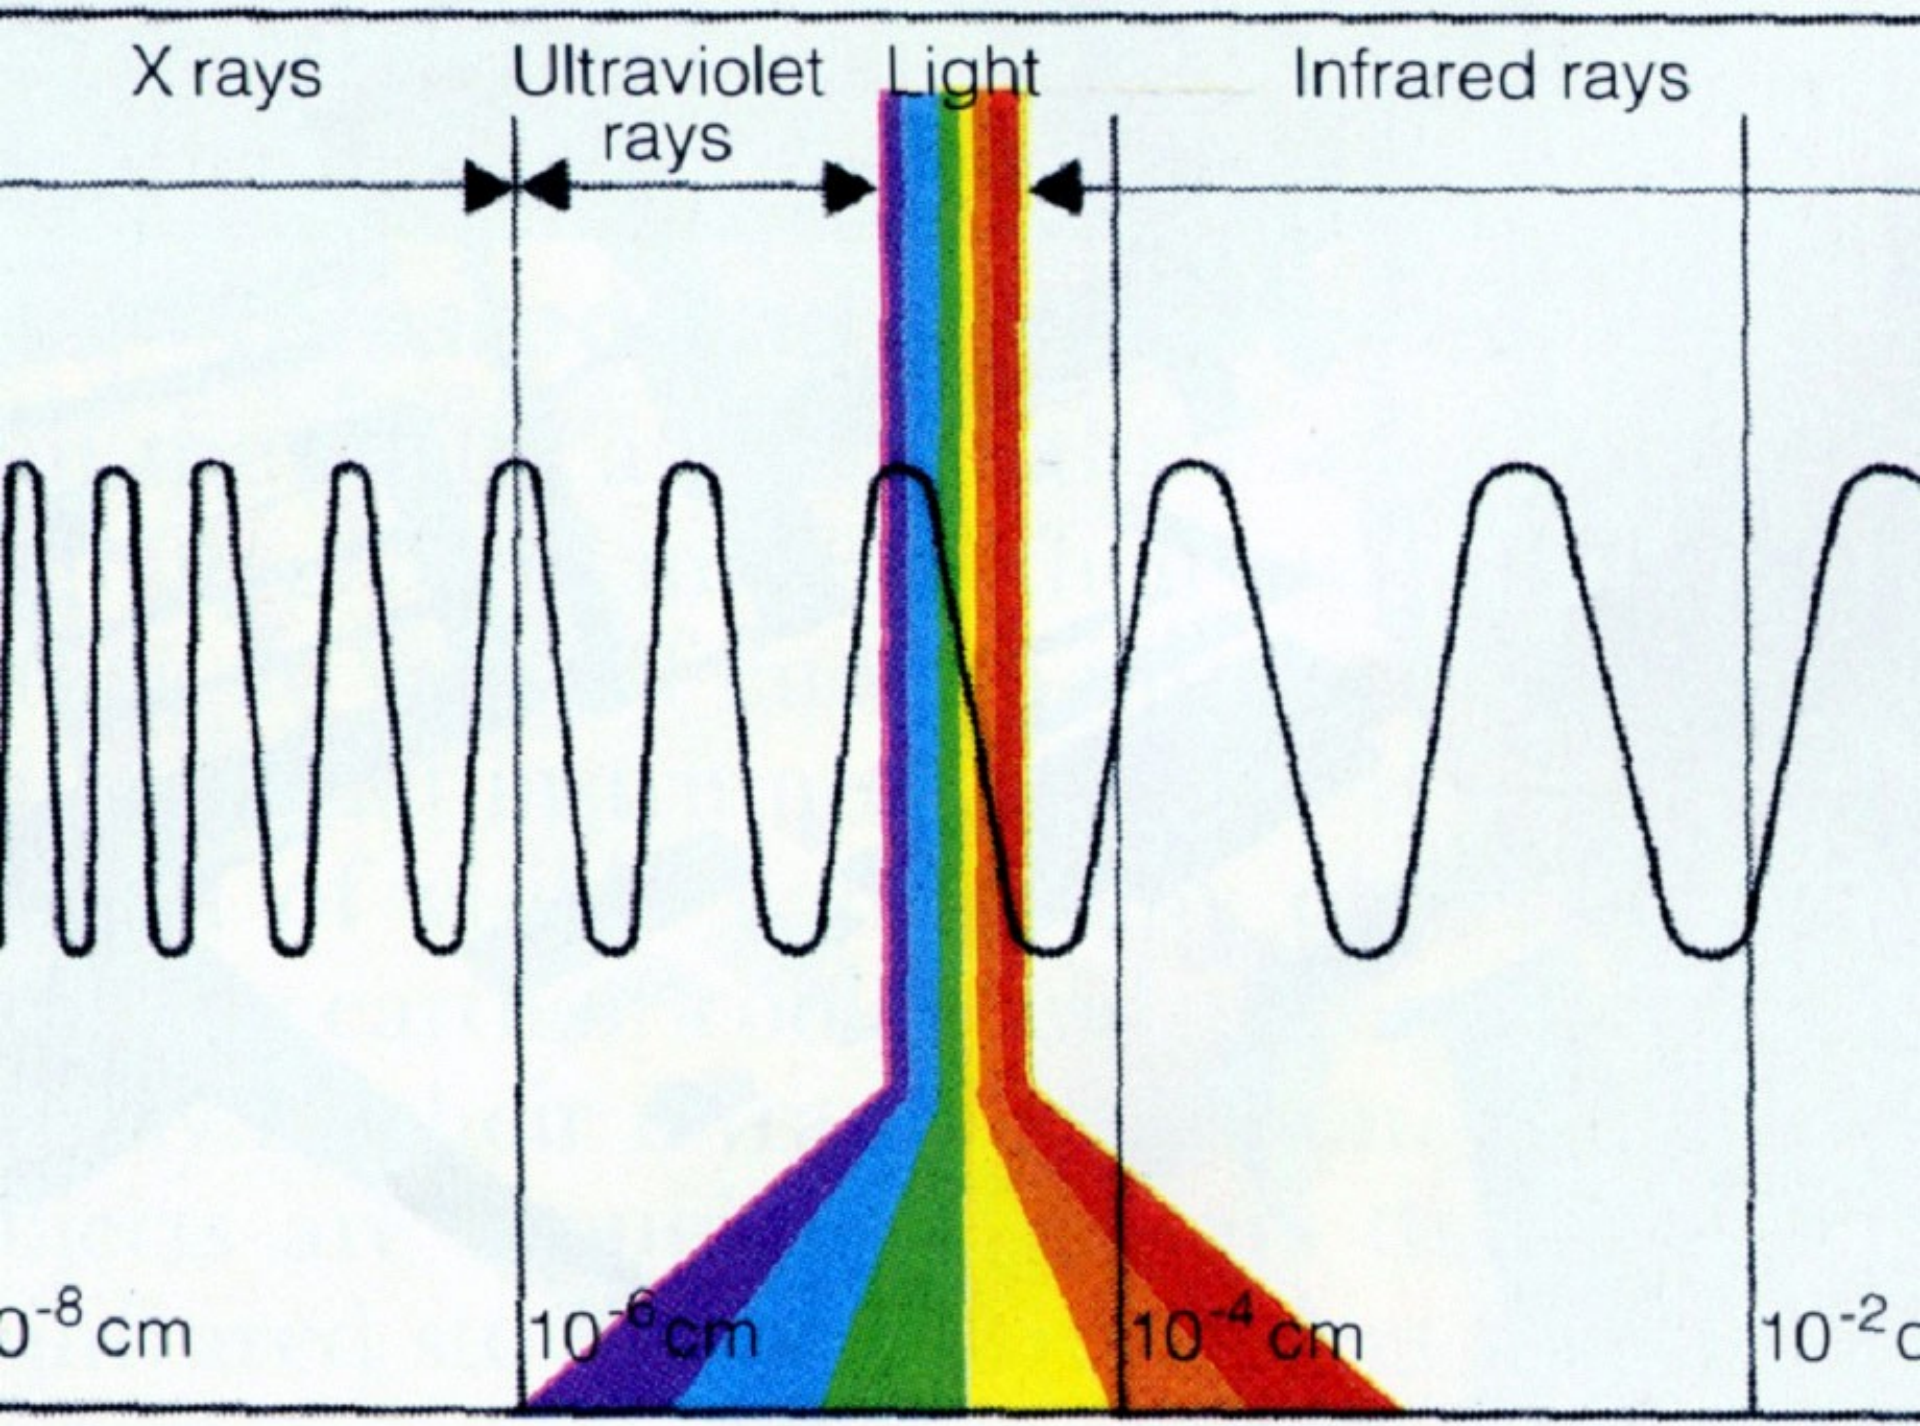

Nevertheless, we, according to his promise, look for a new heavens and a new earth, wherein dwelleth righteousness
II Peter 3:13

And I saw a new heaven and a new earth: for the first heaven and the first earth were passed away; and there was no more sea.
Revelation 21:1

But as it is written,
Eye hath not seen,
nor ear heard,
neither hath entered
into the heart of
man, the things
which God hath
prepared for them
that love him.
I Corinthians
2:9

When Ingrid Carey says she feels colors, she does not mean she sees red, or feels blue, or is green with envy. She really does feel them.
She can also taste them, and hear them, and smell them.
The 20-year-old junior at the University of Maine has synesthesia, a rare neurological condition in which two or more of the senses entwine. Numbers and letters, sensations and emotions, days and months are all associated with colors for Carey.
The letter "N" is sienna brown; "J" is light green; the number "8" is orange; and July is bluish-green.
The pain from a shin split throbs in hues of orange and yellow, purple and red, Carey told *LiveScience*.
Colors in Carey's world have properties that most of us would never dream of: red is solid, powerful and consistent, while yellow is pliable, brilliant and intense. Chocolate is rich purple and makes Carey's breath smell dark blue. Confusion is orange.

Scientific acceptance

Long dismissed as a product of overactive imaginations or a sign of mental illness, synesthesia has grudgingly come to be accepted by scientists in recent years as an actual phenomenon with a real neurological basis. Some researchers now believe it may yield valuable clues to how the brain is organized and how perception works.
"The study of synesthesia [has] encouraged people to rethink historical ideas that synesthesia was abnormal and an aberration," says Amy Ione, director of the Diatrope Institute, a California-based group interested in the arts and sciences.
The cause remains a mystery, however.
According to one idea, irregular sprouting of new neural connections within the brain leads to a breakdown of the boundaries that normally exist between the senses. In this view, synesthesia is the collective chatter of sensory neighbors once confined to isolation.
Another theory, based on research conducted by Daphne Maurer and Catherine Mondloch at McMaster University in Ontario, Canada, suggests all infants may begin life as synesthetes. In this way of thinking, animals and humans are born with immature brains that are highly malleable. Connections between different sensory parts of the brain exists that later become pruned or blocked as an organism matures, Mondloch explained.
Maurer and Mondloch hypothesize that if these connections between the senses are functional, as some experiments suggest, then infants should experience the world in a way that is similar to synesthetic adults.

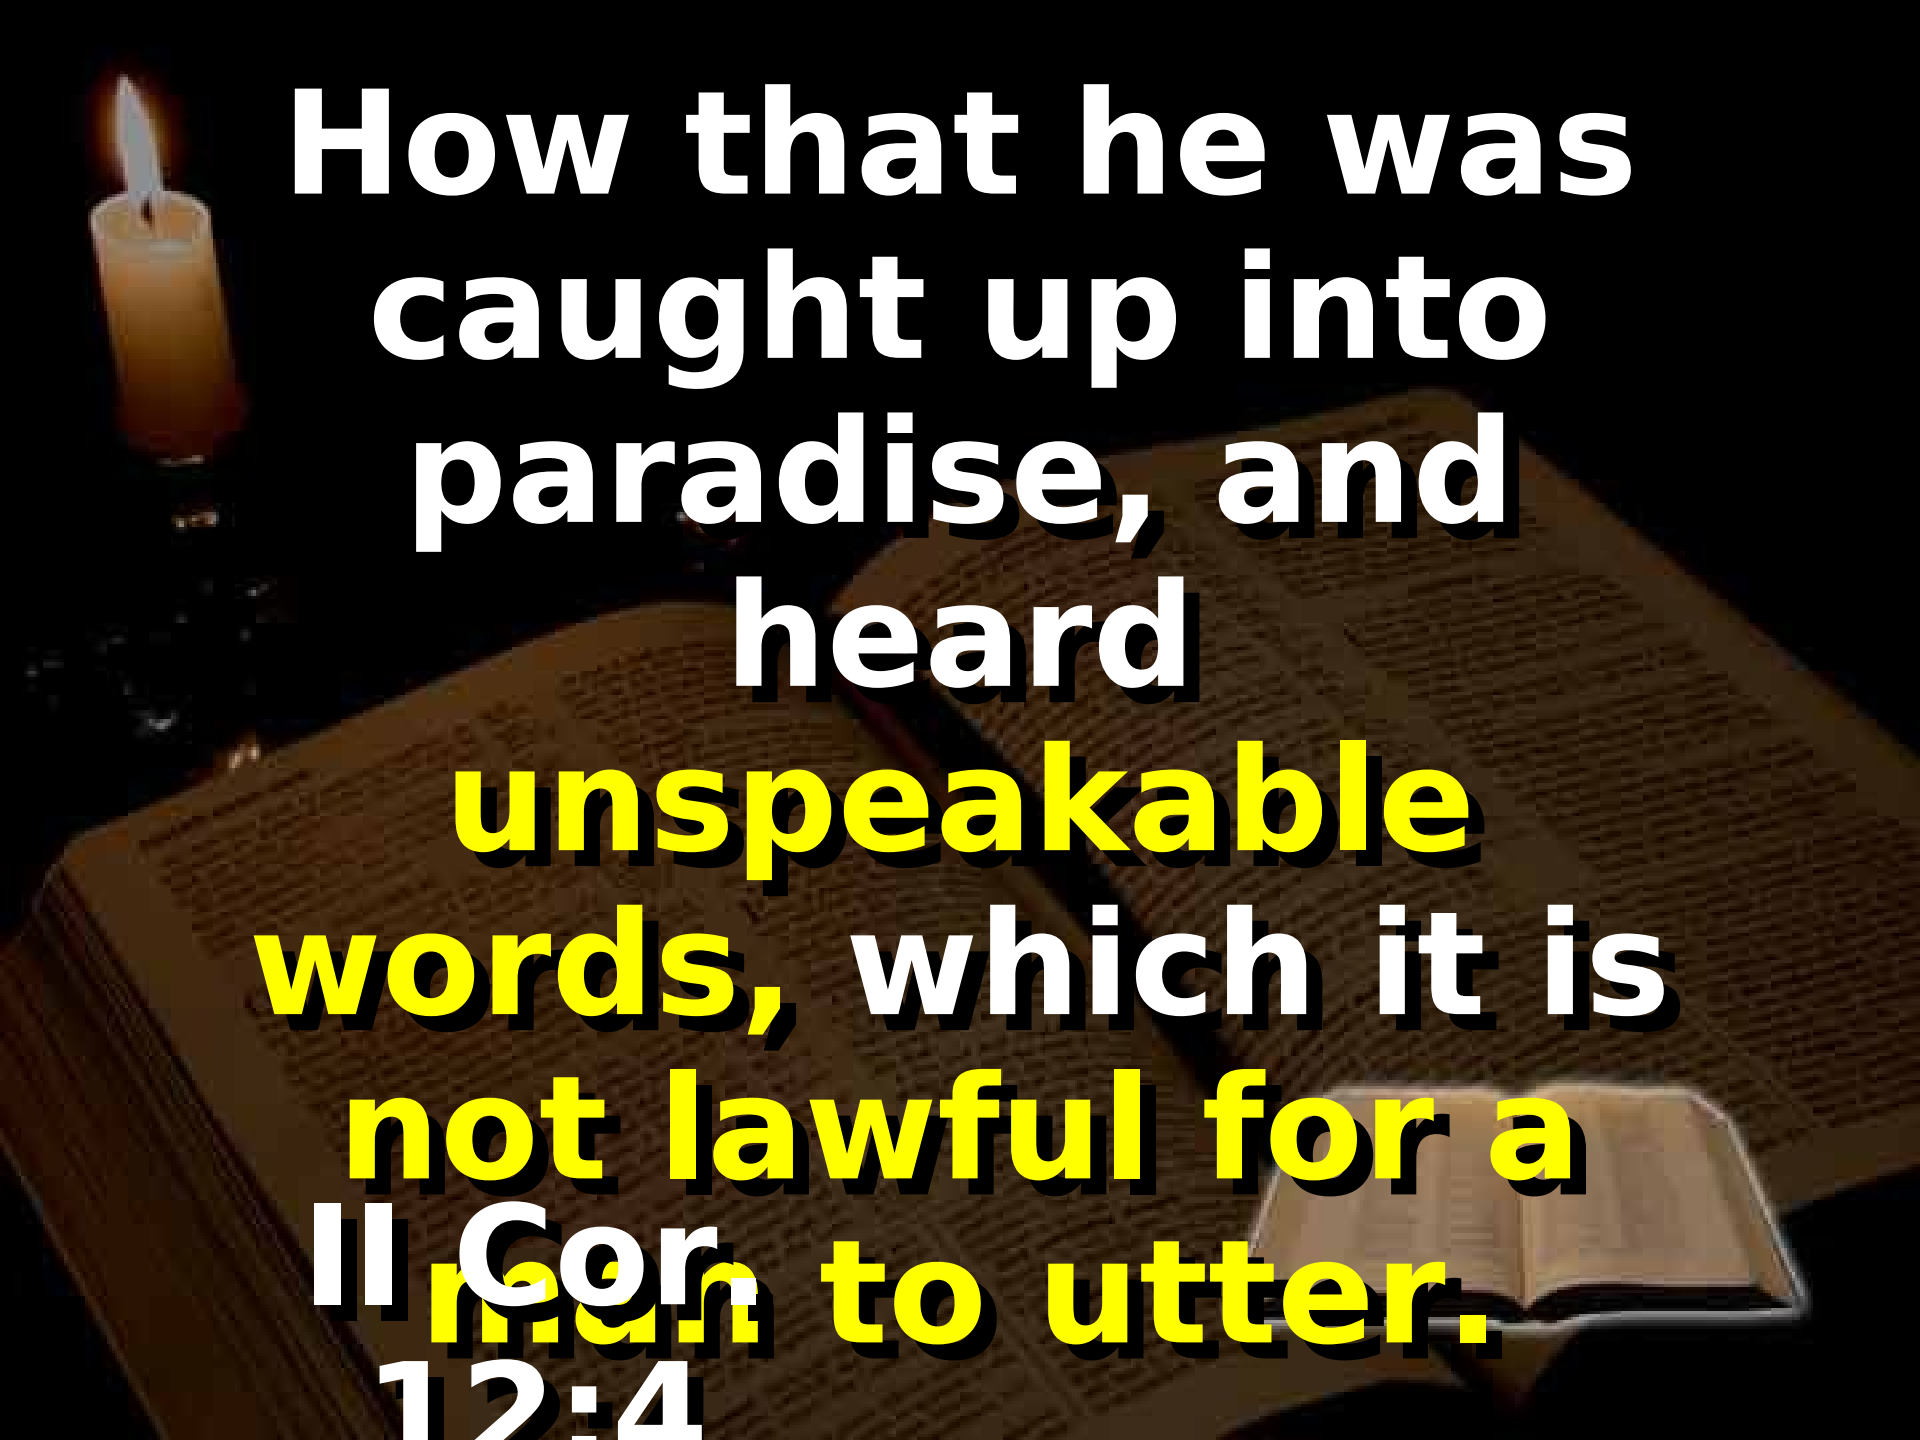

I learned to use computer programs on an IBM XT 8088, 4.77 Mhz.
When I got my Pentium 4, 3.4 Ghz. W/hyperthreading, 60 Gig HD, 2 gig ram the same programs ran much faster and in color!

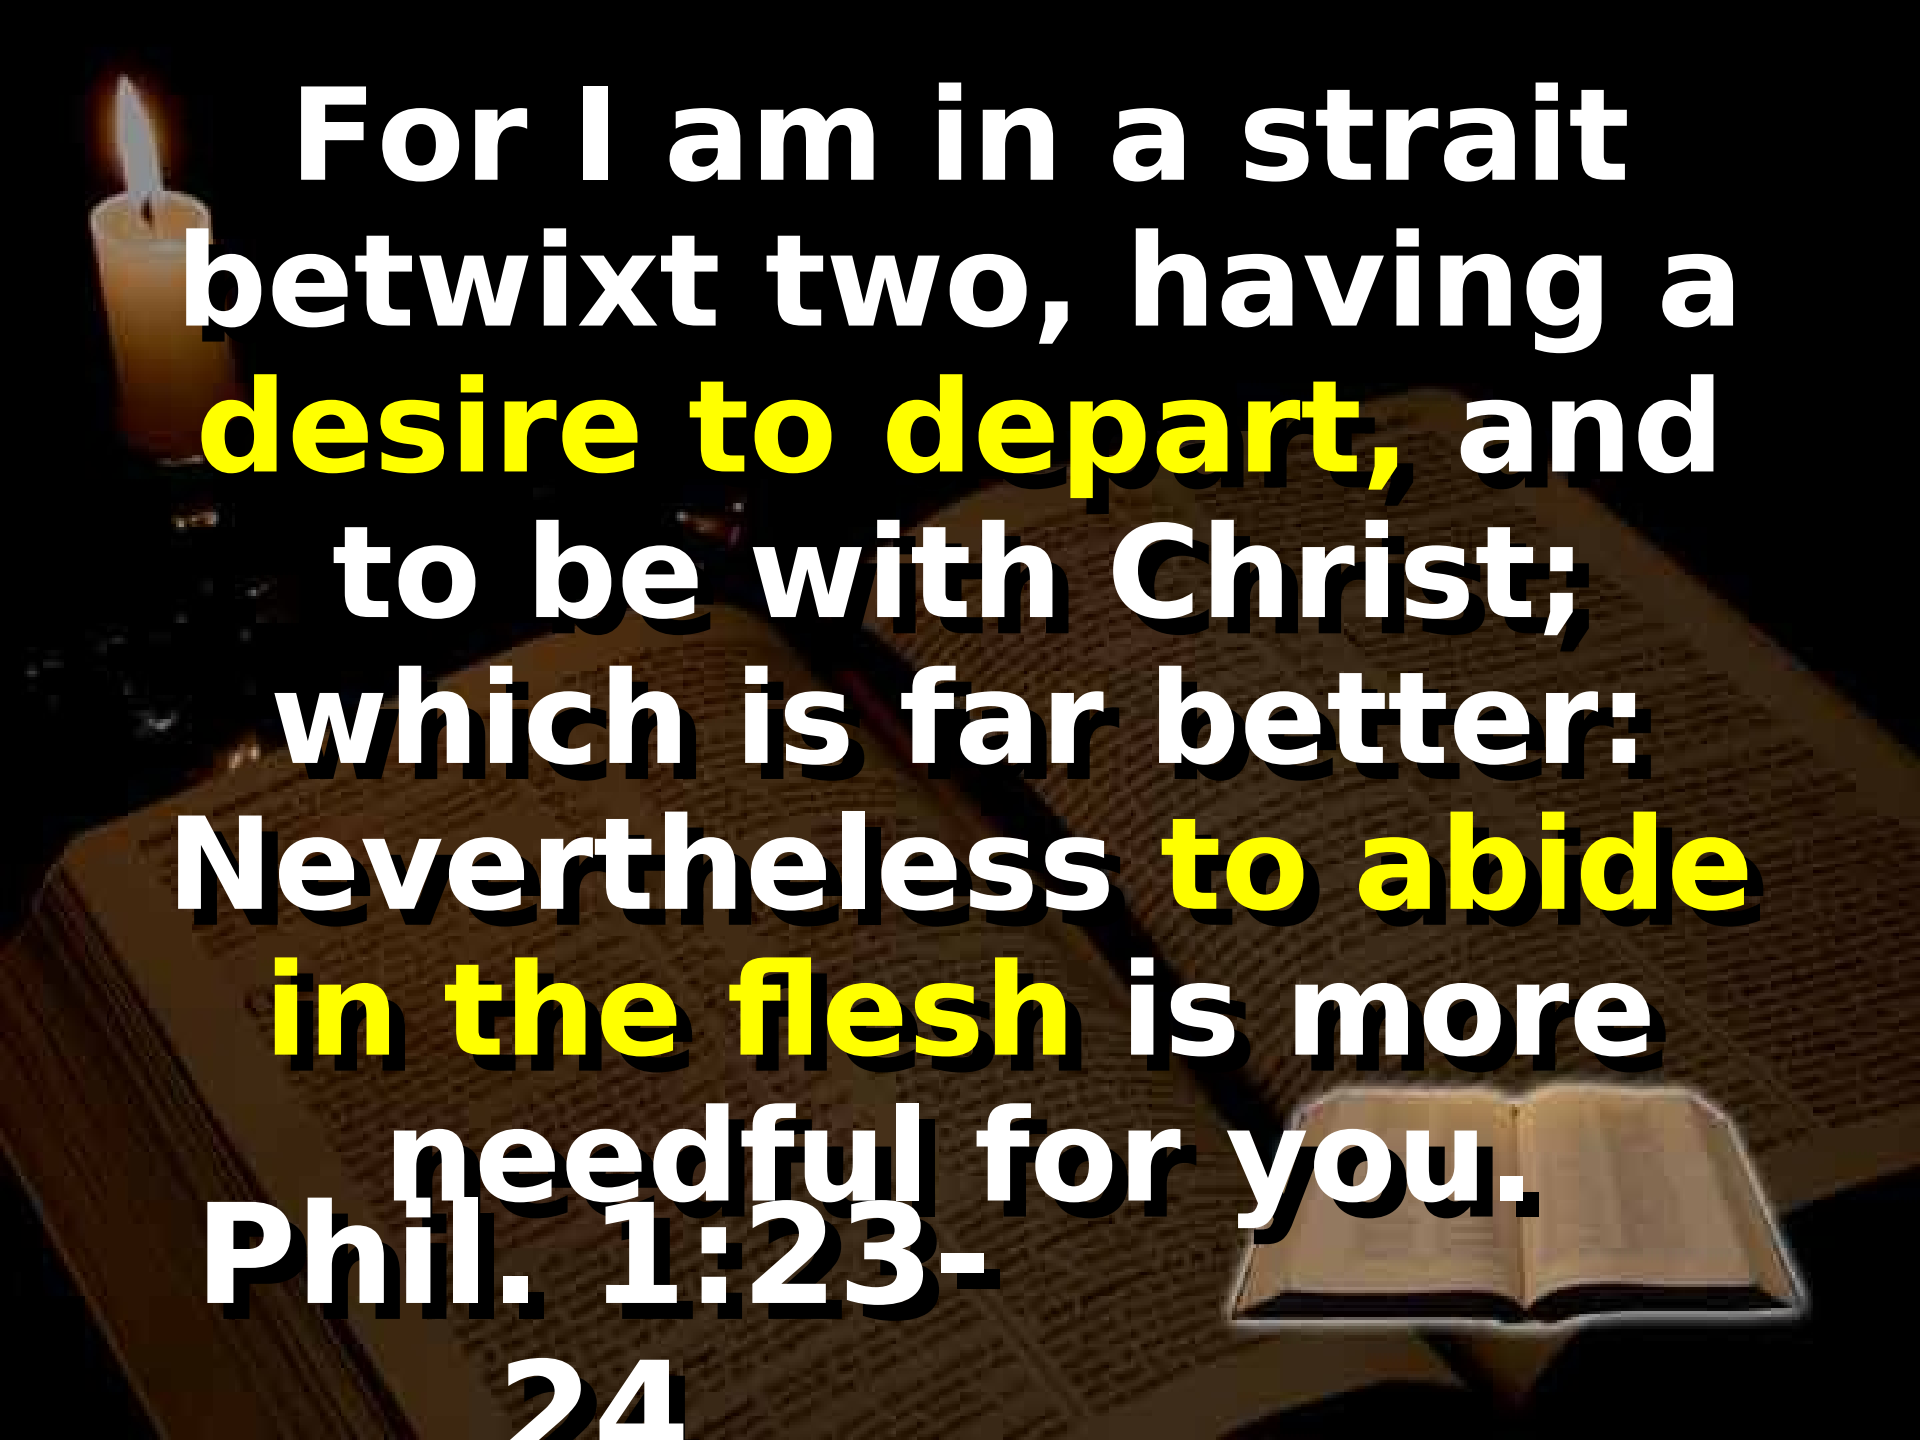

If you are a child of God, you are headed for a systems upgrade that will blow your

I knew a man in Christ above fourteen years ago, (whether in the body, I cannot tell; or whether out of the body, I cannot tell: God knoweth;) such an one **caught up to the third heaven.**

And I knew such a man, (whether in the body, or out of the body, I cannot tell: God knoweth;)

II Cor. 12:2-3

How that he was caught up into paradise, and heard unspeakable words, which it is not lawful for a man to utter.
II Cor 12:4

For I am in a strait betwixt two, having a desire to depart, and to be with Christ; which is far better: Nevertheless to abide in the flesh is more needful for you.
Phil. 1:23-24

Let's summarize

1. God made the world.
2. He owns it.
3. He makes the rules.
4. We are guilty of

10 Commandments Ex. 20

1. No other God's before me.
2. No graven images.
3. Don't take God's name in vain.
4. Remember the Sabbath.
6. Thou shalt not kill.
7. Thou shalt not commit adultery.
8. Thou shalt not steal.
9. Thou shalt not bear false witness.
10. Thou shalt

Let's summarize:

1. God made the world.
2. He owns it.
3. He makes the rules (like the 10 commandments.)
4. We are guilty of breaking His rules.
5. We will be punished or ~~we must find a~~ substitute to take our place.

Jesus is willing and

If you died today, where would you go?
